> combined. If high speed digital communications were allowed on HF the
> you might fit one or two QSOs on the entire band. We'd be back to
> the days of spark-gap bandwidths.

That is a technically ignorant and incorrect response ... you clearly know
nothing of which you speak if you mean that only "one or two QSOs" could be
conducted on, say, 20m if both QSOs used the entire available bandwidth.

The whole principle of SS is to allow many stations to simultaneously occupy
the same band in a way that allows all to proceed essentially unimpaired by
the peresence of the others ...

> -> How would
> -> it be if someone would crank up their ATV transmitter on 20-meters?
They'd
> -> take out all of 20 and some of 30 or 15 meters.

> laziness.

Baloney ... you only find value in things involving toil and sacrifice ...
I find value in knowledge and understanding, no matter how easily
it is acquired ... if it "comes easy," or if it's essentially "free" because
the individual is a professional in the field, the value of the knowledge
or skill is NOT diminished one iota ...

Your quasi-religious fervor WRT your "work ethic" is absurd ...

> -> BUT I do hear quite a few like you who

You're the one who started all the "work ethic" stuff ... remember? ... you tried to ridicule me for simply using the priveleges granted by a license which was required to operate while residing for an extended time in a foreign country ...
implying that I had "violated moral laws by not observing your work ethic ..."
(by not beeping fast, of course)

I don't think that's a better idea at all. The Technician license battle has already been waged and most fair people agree that its been of great benefit to Amateur Radio. Our hobby didn't come into being with the license classes it has now. It evolved. I hope it continues to evolve and in a positive, reasonable way. I'm a person who was proud to join ham radio as a technician class licensee. It gave me a chance to look around and see how I could grow and contribute.

No technical background but a willingness to try to learn. And I soon decided that upgrading was the right activity for me. It would give me the opportunity to learn and grow. I'll never be as adept as some of the people I've meet in electronics. I had to "teach" myself mostly. I would have loved to have had an elmer/elmira. But doing the best I could and achieving some success was (i confess) a source of pride. Others have their own stories and priorities. But I'm happy to have learned a great deal and encouraged others. I'm pleased to see such a diversity of ability and interests in the service. Please do the same (the encouraging part).

What is it?

FISTS is a well established and recognized CW organization in the world of amateur radio. Founded in 1987 by Geo Longden, G3ZQS, it now has a membership exceeding 2000, and is growing daily.

AIMS of FISTS

1. To further the use of CW on the amateur bands.
2. To encourage newcomers to the CW mode.
3. To engender friendship within the membership.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated May 28, 1997 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (630)979-5414, electronic mail:
parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. |
Wilson, and ARRL for providing some of the information.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds.
Free parking. Info: Debbie Burton, N9DRU, 1153 Union St.,
Marseilles, IL 61341-1710, tel. 815-795-2201 (Usually an
excellent hamfest, with sellers from Illinois, Iowa, and
Wisconsin. - AJ9S.)

Jun 8 (Sun), Wheaton, IL. Six Meter Club of Chicago.
DuPage County Fairgrounds, 2015 Manchester Rd. 7 AM.
Admission $5. VEC tests 9 AM - 1 PM. Talk-in on 146.97 MHz
(107.2 PL) or 146.52 MHz. Info (708)442-4961 or contact Joe
Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland
Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage
County Fairgrounds. County Farm & Manchester Rds., Wheaton,
IL. See notes at the end of this article.

JULY 1997

Jul 13 (Sun), Sugar Grove, IL - Fox River Radio League, Wau-
bonsee Community College, Rt 47 at Harter Rd. 6 AM. Admis-
sion $5. VEC tests 10 AM only. Talk in 147.21 (pl 103.5 &
107.2 Hz) Info: Diana, WD9API (630)293-7485.

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc.
(RARA) Amateur Radio and Computer Hamfest. Winnebago County
Fairgrounds, about 15 minutes west of Rockford, Il. Talk in
on 146.61 MHz, 114.8 Hz PL. This will be in the main exhi-
bition hall with room for tables. Ham Radio Vendors, Com-
puter parts vendors, tailgating, food. Code receiving con-
test, Throw the Radio contest, Great door prizes. For table
reservations contact Mike Anderson at (815)397-4304 or
mander5@ix3.ix.netcom.com. For any other information con-

tact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com or see http://www.rockford.com/rara/index.htm

AUGUST 1997

Aug 2 (Sat), Quincy, IL - The Western Illinois Amateur Radio | Club. Eagles Alps, 3737 N. Fifth Street, Quincy, IL 8:00 | a.m. to 2:00 p.m. Admission: $3 at the gate, $2.50 in | advance. Lunch available. Free tailgating. Dealer tables | available for $5, Friday evening setup permitted. Contact | N9JF, tel. 217-336-4191, for table reservations. off-site | VE testing. Contact NA9Q, tel. 217-224-8526, for testing | information. |

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5. Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recreation Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL Admission $5. Outdoor flea market on paved parking lot. Indoor reserved tables. VE testing 9 AM - noon, bring original license and photocopy. Talk in on 147.33 (+600 kHz), 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, WD9AYR, (630)759-7005.

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen

County AR Technical Society. Admission $5. Parking $2.
www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

The position of the Canadian RAC Board of Directors on 'accepting the deletion of the CW requirement' has not been endorsed by either the Canadian Government or a majority of Canadian amateurs. It is not by any means a popular stance in this country. The position of the ORALCE group in New Zealand (recommending the removal of the CW requirement) was at odds with the wishes of the national ogranisation representing amateurs.

Where did you get this notion that New Zealand and Canada want to eliminate code testing?

>you from transmitting on the ham band.

How often does this actually happen in the real world? Very seldomly. And how often does it happen at the hands of a ham operator who has taken it upon himself to play radio cop? Never.

> Its too bad that your
>up there and that you are not in my area, cause you would soon find
>out if we ever picked up on a signal. Perhaps the area that you
>are in, doenst have any hams operating in the area.

What could you do about it? Nothing. You have absolutely no authority. If you're foolish enough to go trespassing on his property, it is you who will soon find yourself in legal trouble. At best, you will be charged with trespassing and probably served with a civil suit for harrassment and/or invading his privacy. At worst, you might well find yourself on the wrong end of a .45.

>How can we take your equipment, thats easy, first of all there would
>be a report of a possible TVI problem.

To which the FCC either does nothing, or...on a good day...sends a form letter with suggestions for reducing the interference. Included in the letter is the suggestion to "please disconnect any illegal linear amplifier you may be using." Pretty strict enforcement, isn't it?

>Then of course someone with
>authority would be visiting you, then upon discovering that you have
such
>equipment that is capable of transmitting on amateur bands. Now for
>those who would say that they wont catch me transmitting, wrong !!!!
cause
>they dont even have to catch you transmitting, it is illegal to even in
>your collection to even posses such equipment.

Absolutely false. There is NO prohibition against owning a radio transmitter. ANYONE can own equipment capable of transmitting on ANY amateur radio frequency. An illegal act is only committed if an individual chooses to transmit without the proper class of amateur license.

Here you have it...more arrogance, half-truths, and outright false information being spread by ham operators. Why do you think CBers, radio operators in other services, and even the general public despises you

folks so much? Why do you think there are several like myself who have gone through the rituals and obtained an amateur license...only to abandon the service after hearing the arrogant, "holier than thou", stuck-in-the 19th century, self-appointed Radio Gods who make up the majority of the population on the ham bands?

We're buying Win95 on our new machines at work, but we have literally dozens of PCs (in a company with roughly 150 employees) and it would cost a good deal of money to buy copies of W95 for all of them. I can't see any business reason to buy it -- or the RAM/hard disk/CPU upgrades required on many of the 386/486 machines -- if only one application would use it.

Similarly, I can't justify spending a few hundred $$ on a new OS, more RAM and a new CPU for my 486-50 at home just for one application. If I were shopping for a ham-related app and had a choice between one that would run under DOS or Win3.1, and one that ran only under Win95, the Win95 app would have to be a LOT cheaper than the DOS/3.1 app!

True.

>Canadian stations (in addition to "C", also share part of the
>"X" series with Mexico. In fact, the first scheduled broadcast in
>North America was from station "XWA" (later "CFCF") in Montreal
>on May 20, 1920.

Canada has (among others) the blocks CF-CK and some stuff in XG-XO.
XWA would no longer be a valid Canadian call; the XW block now belongs
to Laos. Many of the other C and X blocks belong to other countries
besides Canada and Mexico.

>Actually, the practice of "K" west/"W" east was not implemented
>for some time after the start of commercial licensing.

Not really true. K west and W east for land stations does predate
commercial broadcasting. However, the K/W dividing line was moved in
the early 1920s, which accounts for most of the W stations west of the
Mississippi. Also, in the 1920s and 30s it was not particularly
unusual for a broadcast station to move several hundred miles (KYW,
which moved from Chicago to Philadelphia, possibly by way of
Cleveland, was by no means a unique case); this accounts for several
more exceptions.

>Here are some calls of early (1920's) stations in order they were
>first on the air.

FYI some of the calls on this list contradict some pretty reliable
information I've read on this subject. Unless they reflect call
changes that happened after the stations came on the air? Except for
KDKA (which was licensed during a brief period when the same blocks of
calls were being used for ship and shore stations -- this also
accounts for their K call in the East) my information is that the
first four-letter calls issued to land stations were issued in 1922,
and that WAAB was the first such call issued. (as no call with three
identical letters in a row were allowed)

>broadcast Dempsey/Carpentier fight) WBZ Springfield, MA (Later described
>by Department of Commerce as first license for a broadcasting station)

I believe this is true. KDKA and several other early broadcast
stations weren't actually licensed as "broadcasting" stations.

Rather, they were "special land stations". (presumably "special"
because they didn't talk to ships..)

As someone pointed out earlier, it would take an act of congress
to get any money paid to the FCC as license fees spent on enforcement.

Wrong. Deals are made. If we are just short of enough countries who
want to totally drop the cw testing exam requirement and add those who
are willing to moderate that requirement, we may be able to come up
with a majority vote. Remember the US has only one vote out of ??? 190
or so votes (countries). KE4IKT The US does not control the vote.

Chad,

I also have a 96 Blazer and have had the same problems except mine drained down with just a cell phone on all night. The Chevy folks (the now neutered Mr. Goodwrench) told me that the on board computers that are standard with the truck, along with the keyless entry system, are enough to drain the system over a long weekend. Surprise, Surprise. I have not followed up in the past month or so but your post has just prodded me back to remembering the problem. I will follow up with you as I find anything.

Thanks for the compliment. I will try. My grandfather was an
electronics inventor who knew Henry Ford. I don't claim to be that
smart but have always loved ham radio. Tried to pass my code test at 5
wpm 30 years ago and could not (back then I had to copy perfect one
minute code ... that is why I am so opposed to changing the testing
rules to again require one minute perfect code copy on the code
exams). When the new no code Tech came out I studied and got my
license 3 1/2 years ago. Last year I passed my General written. This
past Feb I passed the 5 wpm code exam and upgraded to Tech Plus. This
month (May I passed both the Advanced and Extra written exams).

I really respect and basically agree with Gary on this, but from
a practical standpoint, I feel that opening the HF spectrum up to even
more ex-CBers by lowering the standards will be an even worse disaster
that leaving the morse requirement in place. I haven't lived outside
of the Southeast so I don't really know what it is like elsewhere, but
75 and 160 meters has collected some of the most unfriendly,
opinionated, bigotted people I've ever had the displeasure of meeting.
Oh, except for the internet, where it seems you can be get away without
having any decency. Somehow I don't think the words I have read in this
newsgroup would have been said if the parties had been face-to-face, do
you? Check out 3975 and 1875 some night and you will see what I mean
about the collection of losers on HF these days. I won't even mention
14313, or whatever it is.

Actually I don't really give a rats ass. I still find nice people on cw
and the other digital modes. Funny how the nasties are only on phone.
The worst I've ever run into on rtty are the DXers who don't much care
who they interfer with when trying to contact Spain for the 4700th time.
Never an unkind word have I heard on CW in almost 40 years of ham radio.

Hey, y'all have a great discussion, hear?

>Sheesh!

Look, these things are taught at the junior high and high school level.
What do you want, third graders? You're entrusting these people with
permission to do things with significant possibility of causing harm.
Don't you think that they should have to have at least a rudimentary
understanding of what they are doing?

>Are we looking for new hams here, or candidates for employment in the
>engineering division of IBM or Motorola?

No, we are just looking for people with a high school level grasp of science
and mathematics who can easily learn the material needed to operate in
a safe way with the privileges granted them by an entry level license (note
that includes permission to operate a 1.5 kW station).

>Leaving aside the fact that the comments in this thread seem to ignore
>the state of (technical) education in this country, let's be a bit
>more realistic here, shall we?

As I noted in another thread, the appearance of decline of education in this
country is more apparent than real. It was noted that SAT scores have
declined 10% from the 1950s. But in the 1950s only 10% to 15% of high school
students took the SAT exam. And they were the *top* 10% to 15% of their class.
Now virtually every high school student takes the exam. The bright students are
still there, but the *measurement* is now diluted by the dumb ones as well. It
should be noted, however, that today there are more students scoring the maximum
score of 1600 on the exams than there were in the 1950s. Pandering to the lowest
common denominator gets us nowhere useful. We have to look to those with better
than average skills in order to avoid mediocrity, and there are still plenty of them.

>After reading all the qualifications expected here for an *entry
>level* ham ticket, I tried to think of any hams I know who could
>qualify for such a license. Not very many, if any. This sort of
>thinking will do far more to decimate the ham bands than any simple
>code test could possibly do.

I find it more than a little shocking that the circle of amateurs you
know are subpar compared to bright high school students. That does
reinforce the idea that we've been emphasizing the wrong things in
our recruitment and selection processes over the years.

>Yes, we need more techie types in ham radio, but it's ridiculous to
>suggest that one needs to hold an E.E. degree to be a good ham. In
>addition to tech types, we need lots of folks who don't have all that
>much interest and knowledge of log tables, but have other skills of
>value to contribute to the hobby.

No one has suggested we should demand EE degree levels of knowledge
for entry into amateur radio. If you think the kinds of knowledge (which any
bright high schooler should have) we are discussing represents an EE degree
level of knowledge, your opinion of the knowledge needed to be an EE is very
far off the mark. For goodness sake, logs are a *6th grade subject*. Just how
stupid do you want amateurs to be?

>We need hams with "people" skills as well as with technical skills.

Yes we do. In addition to a minimum standard of technical skill, we would
like amateurs to have people skills as well. Though not all amateurs need
exhibit those latter skills to a high degree, all amateurs need those minimum
technical skills because all of them operate transmitting equipment with the
possibility of malfunctioning and causing harm to the unwary.

>We need folks who can organize programs to get young students exposed
>to ham radio. We need hams who can teach. We need hams who can
>organize and coordinate packet networks. We need hams who can
>organize support or opposition to ham-related legislation at the

>getting elected to public office. We need hams with writing and
>publishing skills. We need hams with PR skills. We need ham salesmen
>who can "sell" our hobby to "customers" who've never heard of us. And
>so on.

Sure, we need all that, but that's not an either/or with having a minimum technical competency as well. Would you give a great car salesman a driver's license even though he can't keep a car between the ditches just because you need a great salesman? Of course you wouldn't. You want him to be a great car salesman who also won't wreck your demonstrators and kill your customers.

>The ham ticket should not be an advanced degree in electronics, it
>should be an entrance permit that lets you in the door of a wonderful

>most or all of the ham test should not be "open book." With an "open
>book" test, there need not be so much focus on rote memorization, but
>instead one could demonstrate the ability to find answers to more
>complex questions than are already on the test.

Yes, I've advocated open *reference book* exams too. I think the tests should correspond with the sort of real world way amateurs would be expected to solve problems. I don't expect them to regurgitate a bunch of rote memorized facts. I expect them to be able to demonstrate real world problem solving skills. But we aren't talking about graduate level EE stuff here. That would be several orders of magnitude beyond the levels we are looking for.

The problem is that the current exams are on such a ludicrously low level that what I'm proposing may seem hard by comparison. In other words, our current entrance exam wouldn't strain a bright 3rd grader, what I'm proposing would be a slight challenge to an average or above average 9th grader. That's at least 7 intense years below an EE level.

I wouldn't hand a loaded gun to an infant, and I don't think we should hand permission to operate high power VHF/UHF equipment to people unable to comprehend some of the potential consequences of that.

Just how dumb do you want hams to be? Must we have exams which those in the lowest 10% of their class can easily pass? Even if that

makes them potentially unsafe and unable to comprehend the implications of the regulations they are supposed to obey?

I think exams need to be sufficient and necessary, no more, no less. And I don't think it reasonable that an exam couched on the level of a bright 3rd grader can be either. In fact current exams are worse than that, with a 5 year old holding an Extra ticket. Now that's worse than absurd. That's obscene.

I think a *qualitative* understanding of the basic calculus, IE a familiarity with the concept of limits and an idea of what is meant by elementary differentiation and integration, is needed to grasp the significance of the near field of an antenna. This isn't really much to ask. And it is pretty important in terms of determining if you are at risk of excess RF exposure. It is also important to the understanding of the operating curves of active devices so that one won't exceed one or more safety limits in operating the unit. It is even needed to understand the inrush characteristics of a power supply filter capacitor. I'm not asking that the applicant be able to derive Maxwell's Equations from first principles here. This is pretty basic stuff, introduced early in high school math classes.

I think you know me better then that. I said the normal ham. The normal
ham is an appliance operator, and I think that we all would fall into that
category to some extent. How many ham's do you know build, design,
and implement their own equipment. The field even narrows even
farther when you talk about new advancements in technology.
Yes I agree with you whole heartedly about the future of dsp etc
and that the design can come from software, and software design.
So I'm not off the mark, If what I'm saying is not true then you pick
just 10 hams by random whom you do not know and visit their
ham shack. This is what I'm talking about, these ham's understand
theory and such but are not capable of design and implementation.
But they are capable of using and learning this new technology,
and that is our job. We can talk all day, but if we are not doing
anything about it then we are going to lose. It takes more then
just a couple of people, rules have to be changed, design and
implementation, testing, sales, all this takes time, money,
people, and an organizations to get it moving.

You forgot to mention reserving a chunk of the spectrum for the military
in case of war. I suspect that isn't as important now as it once was.

> theory and such but are not capable of design and implementation.

We disagree on this point ... I would submit that if we picked 10 hams
at random and visited them with a decent theory test, that at least 9,
if not all 10, of them would fail ... THAT is our problem ... at least 9 out
of 10 hams don't even truly understand the most basic theory ...

> But they are capable of using and learning this new technology,

Perhaps capable of learning ... willing to learn is a different story ...

Amateur radio is, unfortunately, the horse that refuses to drink.

Nice retoric with the We THE PEOPLE stuff, too bad it has no connection
to reality. You've got to realize that amateurs are a small unimportant minority
of the population. We don't dictate the rules under which governments operate.
At best we can learn to make those rules (both the written rules and the more
important unwritten rules) work for us to achieve what we want. Whether you

are politically correct or not is irrelevant. That you are politically *naive* is the problem here.

>Also, any good tips on getting proficient? Many thanks.

Hi,
My advice is to use the computer. The best way is to set the
character speed at about the test speed [YES], but set the gap beween
the characters long to give you thinking time. Once you can copy that
with some ease cut down the gaps and carry on until you are up to
speed. That way you learn the correct sound of the characters. Once
you've got up a bit of copy speed you also need to copy CW off the
air. Here in England the CW for the recieve part of the test is hand
sent and you would certainly have problems if all the CW you copied
was perfect - as sent by computer. Also copying off the air is good
practice for when you get the ticket. The key ?? forget it until you
are almost at the exam speed, that way you dont pick up any bad
sending habits. When buying a key you need to spend plenty of time
trying all the various models to find the right one for you.
The secret is practise and lots of it, lots of short spells
are better than long sessions.
Good luck, it took me some time but now I use CW about 80% of
the time. Email me and let me know how you get on, best 73's.

Mandate
>>of Service by the FCC. If you have your own Mandate(hobby) and the FCC steps
in
>>and takes away our spectrum, then you are to blame. It is service that keeps
us
>>here, it is service that will fuel the future.

Oh, GUTMAFB! If the FCC takes away spectrum, it's not because of *our*
distinctions of "hobby" and "service". It's because everything today has a
dollar sign attached to it, and it means money, money, money.

Spare us the guilt trip. "If we loose ham radio, it will be your fault" What a
crock! It's like a bad foreign movie I saw several years ago when a daughter
was leaving for the evening to see a boy that mother didn't approve of. Mother
was upset and conveniately had an anxiety attack and smashed a stack of dishes
she was holding, and said to her daughter, "Now look what you've made me do."

Answer me this: What's the main reason a person decides to get a ham license?

A. It looks like it would be a fun hobby.
B. They want to provide a service.

or (This one's for Burt)

C. They want to erect phalic symbols in their backyards

>licensing system.

That's pretty much a given, I'd think, and if you want a small,
elitist "service" limited to what's left of our present band
allocations, it makes a certain amount of sense. Besides, it leaves
more customers for ISPs, computers, cellphones, and various commercial
radio systems. Those guys aren't agents provocateur for some
commercial interests that need more bandwidth, are they? Naw,
couldn't happen.

>A reasonable compromise would be to structure the licensing system

Reluctant or not, that's probably the inevitable future of ham radio.
It's practically there already.

>Canada does this, but the US already has such a radio service,
>it's called CB. Is that what we want amateur radio to be? Apparently
>people like MD do, but I don't think it meets our charter goals.

No, it would be, in part, what CB was *originally designed* to be - a
Personal Radio Service. Ham radio can take on some of the aspects of
a PRS (as we have already done -ordering pizza is legal now- without
any evident damage) as long as experimentation, building, and public
service are still allowed and encouraged. I really don't see any
significant downside to this, and it's the only way we're going to
have the occupancy and clout to retain our bands.

I've suspected that Gary is exaggerating in this matter, but didn't
have the background to challenge it. After all, it's been 50 years or
so since I was in 6th grade, and I know they darn sure didn't teach
that stuff then. I'd like to compile all these suggestions that Gary
and others have been proposing, and then submit them to any 100 random
freshmen at any random non-engineering college, and see how many of
them could pass the test.

You don't think that Barry's influence as a powerful Senator had a lot
of political influence on our retention of our bands and protection of
our rights? Not to mention the valuable PR and publicity he gave the
hobby? I've forgotten details, but I seem to recall that he had
considerable influence on some of the laws that affect hams.

>What I mean by that is that there are a number of people who are known
>outside amateur radio for the contributions they made *as amateurs*.

How many potential hams ever heard of any of those? How much
political clout do they have, compared to a powerful Senator? It's
beside the point, however, because a third-grader may be a potential
Phil Karn as well as a potential Goldwater.

>>the average ham station.

>
>None of that stuff has the potential to cause harm over a radius of thousands
>of miles. Amateur radio does.

More hyperbole, applicable primarily to HF. VHF and above is where
there's the most potential for future hams. If you insist on a lot of
semi-relevant technical testing for HF privileges ONLY, then say so.

>>You don't need to know higher math to safely operate a ham station,
>>any more than you need to know how to set the valves on your Volvo to
>>be a safe driver.
>
>It your valves are misadjusted on your Volvo, the worst that is likely to
>happen is that you'll burn a valve and be out a large repair bill. OTOH
>if your amateur equipment is out of adjustment and puts a spur on a
>VOR or ILS frequency, you could be responsible for endangering the
>lives of an airliner full of passengers. The difference in potential for
>harm is quite markedly different.

I can safely operate my ham station with only a rudimentary knowledge
of math. Unless you have some sort of monitor hooked up at all times,
you won't know if you have a spur no matter how much calculus you
know. You're grasping at straws here, Gary. When was the last time a
radio malfunction by a ham brought down an airliner? Let's get real,
OK? I suggest that it'd be damn difficult to bring down an airliner
with a radio spur even if you were trying to do so.

>>ever before. That's no reason to deny a ham ticket to those who don't
>>know or care about calculus. If you don't use that stuff on a regular
>>basis, you forget it. I took three semesters of calculus in college
>>in the '70s, and I can't remember ANY of it.
>
>Pity. It is one of the better tools for understanding the physical world.
>As John McCarthy is fond of saying, if you can't put a number to it,
>you don't really understand what you're talking about. For many things,
>including a large part of amateur radio, that requires at least a rudimentary
>knowledge of calculus.

Sez you. I disagree. You see the world from your perspective.
Others use a different viewpoint. A computer needs precise numbers to
solve problems. A human does not, except in special circumstances.
But we're getting into side issues, here.

>>Nothing shocking about it. You're a technically oriented person,
>>probably employed in a tech firm. It's natural that your friends are
>>going to have similar views. I know lots of competent hams who can do
>>wonders with radios and computers, but they've learned it empirically,
>>rather than studying it in school. This used to be called "amateur
>>methods" if I recall correctly.
>
>More precisely such are called amateurish methods (and other things
>no longer PC to say in polite company). There is a big difference. Just

>because we are amateur radio operators is no excuse for our operations
>to be amateurish.

Your contempt for those less accomplished than yourself in specialized areas is a big part of what's wrong with ham radio. Too damn much elitism and clique mentality. I find your apparent attitude appalling. Those "amateurish" ham friends of mine (and myself) are responsible for almost ALL the repeater and packet systems in this area, and probably in every other area. You techie types are generally too busy re-inventing the wheel to actually go out and finance, build, support, and baby-sit a system over any significant period of time, much less condescend to actually operate on the machines and assist newbies in how to use them. My apologies to those few electrical/math geniuses who actually do such things.

>headed logic to novel situations than are those who are blissfully
>ignorant muddle heads used to acting in amateurish ways. In other
>words, those who have a grasp of calculus are more likely to think
>in terms of strength of materials and overturning moments than those
>who have no clue about how to look at such things.

You're living in a dream world, Gary.

>>As I keep pointing out, we should not exclude younger hams. The
>>ticket should be an INVITATION to learn, not a reward for learning.
>>Many of us had little interest in electronics until AFTER we got the
>>ham ticket.
>
>Of course the exam should be an introduction to a lifetime of learning.
>That's one of the main purposes of amateur radio. Passing the exam
>is not a graduation certificate meant to gather dust on a wall. It is a
>key to the laboratory so that we can enter and experiment and learn.

Then we agree completely. Why, then, are we bickering?

>But we can't just let people in the lab who don't know enough to avoid
>blowing themselves or others up. There must be prerequisites to make
>sure that those entering the lab know enough to follow good laboratory
>practices. I don't want 3rd graders in the lab pouring concentrated nitric
>acid on cotton waste because they don't know any better.

Now we're back to the hyperbole again.

>>>I wouldn't hand a loaded gun to an infant, and I don't think we should
>>>hand permission to operate high power VHF/UHF equipment to people
>>>unable to comprehend some of the potential consequences of that.
>>
>>More hyperbole.
>
>No. A rogue transmitter can be just as deadly as a firearm, and at much
>larger distances.

Let's have some examples of how ham rogue transmitters have killed
people. There are lots of examples of hams falling off towers or
grabbing the HV power leads in their amp. Why don't we ever hear
about a ham killing somebody with his errant Death Ray Handie Talkie?

>>I disagree. That 5 year old has a ticket to a lifetime of fun and
>>learning. What qualifies you to deny him that opportunity? He may be
>>the next Goldwater, Collins, or even the next Gary Coffman. I'd love
>>to see half our ranks consist of grade and high school kids, instead
>>of being dominated by rich old white guys.
>
>Do you *really* believe that that 5 year old girl knows enough to comply
>with 97.307? Do you think she even understood any of the technical

Probably not. Most 5 year olds have parents, who can and should
ensure that she doesn't try to fire up the Kill-o-watt amp without ham
supervision.

>questions to which she memorized the answers? I don't. She couldn't
>possibly understand. She doesn't yet have the background. Unless she's
>closely supervised, she's a real hazard to herself and others. From
>the QST story it would appear that she *is* closely supervised by her
>grandfather, but in that case she doesn't even *need* a license. She
>certainly isn't fit to act as control operator of an amateur station on
>her own, yet she is an Extra. She could be a VE at your test session.
>What's wrong with this picture?

What's wrong is you take one isolated instance and try to build a
whole licensing structure out of it. It's just another strawman.

>I'll tell you what I think is wrong with this picture. It is just like the little
>girl Jessica who was trying to set a record for the youngest kid to fly
>a plane coast to coast. She was allowed to do something she wasn't
>equipped to handle, and she killed herself, her father, and her instructor
>in the attempt. That's totally irresponsible.

Yeah, well, when you can show me a ham who killed someone because she
didn't know calculus, I may see your point. It isn't up to the
government to protect us from every possible danger. We need to take
responsibility for ourselves. The problem in the Jessica case wasn't
the lack of another pointless law, it was the failure of the kid's
parents to be responsible parents.

I assume you're a proponent of extremely strict firearm controls,
given the same logic.

I just inherited an old Westinghouse AM/FM console radio, Model H-164
and am looking for some parts for it or any other info one might have.
Need a set of knobs for it too. Not having a picture of it, I'm not sure
what they look like.

SB DX @ WW $OPDX.307
Ohio/Penn DX Bulletin No. 307

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 307
BID: $OPDX.307
June 2, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & 59(9) DXReport, W3UR & The Daily DX, AB4IQ, K4VUD, W4NS, N6ED, K7DBV, K8CX, K8XP, WB8HNC, WZ8D, DJ5AV & DX News Letter, DU9RG, F5ATD, G4BUE & DX News Sheet, G4FUI, HA0HW, IK1DPA, OH2BH, PS7AB and SP9MAX for the following DX information.

7O, YEMEN. "Keep Your Fingers Crossed" for this one! The "DX News Letter" reports Zoli, HA5PP, will arrive in Aden on June 27th, and hopes to be active in September signing 7O/HA5PP, 7O8DX or 7O8CW. QSL via HA5YPP.

7Q, MALAWI. STEVE, 7Q7SB, visited with Paul, ND4X, and Doyl, AB4IQ, in Paducah, KY., on May 26th. He is presently on leave and is living in Midland, TX. He has upgraded his U.S. license to General and is almost ready to take his Advanced. He will return to Malawi July 16th (1997), and will be back on the air sometime in September or October. He should remain there for two or three years. This time he is taking back with him a computer equipped with DXbase, SB200, and a rotator for his Cushcraft beam. AB4IQ will remain as his QSL Manager. With the sunspot cycle improving, he should be quite active as time permits. He is a missionary and maintains a very busy schedule.

9N, NEPAL. Charles, K4VUD, will be in Kathmandu for 20 days beginning July 8th. He plans to operate on 14195 plus or minus and 14.226.5 around 1300z. He is looking for any advice on wire antennas and what other (one) band he should choose. He is hopeful he will have access to the hotel roof for antennas. His E-mail address is: harpole@pegasus.cc.ucf.edu QSLs go to K4VUD callbook address.

A3, TONGA. There will be a couple of station active from here over the next couple of weeks. "The Daily DX" reports Bob, W7TSQ, will be operating from Ha'apal (IOTA OC-169) as A35SQ, from June 4-16th. QSL via W7TSQ direct ONLY. Dennis, W7SNH, may be active as A35DB, from June 4-9th, on RTTY (AMTOR). QSL to W7SNH (ex-WB7SNH). REMEMBER: There is not a

A35 QSL Bureau on Tonga. QSL only to the station's homecall.

A4, OMAN. "The 59(9) DXReport" states Chris, ex-A71CW, is in Oman but not yet active . He reports anyone needing A71CW cards can still use P.O. Box 22101, Doha, Qatar until May, 1998, as his mail will be forwarded.

BV, TAIWAN. Gus, SM3EVR/BV2 will be active until October. No specific bands/modes were mentioned. QSL via homecall.

C6, BAHAMAS. Begin looking for John, WZ8D, from Abaco, Bahamas (IOTA-80), June 5-19th, as C6AIE. Activity will be on 80-2 meter. QSL via WQZ8D: John Walker, 1930 Meredith Ln., Loveland, OH 45140-7216. Skeds can be arranged via E-mail: wz8d@goodnews.net

EP, IRAN. A couple of stations have been active from here. The one may be a SLIM (pirate). EP2MKO (WFWL!) has been showing up on 14004 kHz as early as 2045z and as late as 0130z. QSL via UA6HCW. Ali, EP2AG, shows up sometimes on 14240 with 9K2MU around 2115z. QSL via P.O. Box 16765-154, Tehran, Iran. Also, Moshen, EP2SMH, running QRP, can sometimes be found on 14240 kHz during the same time as EP2AG. QSL via P.O. 17665-441, Tehran, Iran. The best times to look for these stations are on Thursday evenings and Fridays (this is their weekend).

IOTA NEWS. Tony/IK1QBT, Nino/IK1ZOZ and Alex/IK1PLD plan to be active from Gallinara Island (Ligurian group, IP1) IOTA EU-028, between June 7th and 8th. Operators will sign IP1/homecall. Operation will be on all HF bands SSB/CW (WARC bands included) around the standard IOTA frequencies. There will also be activity on 6 meters, VHF and UHF in SSB. Reference number for the Italian Island Award (I.I.A.) is SV-01. QSL via their respectives home calls via bureau or direct.

KP1, NAVASSA ISLAND. The "DX News Sheet" states that rumours from Dayton's HamVention say several groups are looking at an operation in 1998, despite the problems of getting permission to land and operate.

KP2, U.S. VIRGIN ISLAND. Carroll, NA4I, will sign /KP2 from here and will be active June 12-18th. Activity will be mainly on 6 meters which includes an entry in the ARRL VHF Contest on June 13-14th. Also, look for W6JKV/KP2 to be active in the VHF Contest.

QSL INFO AND NEWS......
Well known DXer from DU-land, Robin Go, DU9RG, informs OPDX that he has a new QSL address: Robin U. Go, 818 Acacia Avenue, Ayala Alabang Village, 1780 Muntinlupa City, Philippines. He reports the reason for the change is that he often receives his mail in Cotabato City and it is either lost or opened.

Martin, G4FUI, is now in possession of the logs for his trip last year to Lesotho (7P) and reports the QSL cards have been printed. He has started sending direct cards out this past week. Martin mentions the CallBook address may not be correct. His present postal address is: Martin Rigby (G4FUI), 16, Juniper Way, PENRITH, Cumbria, CA11 8UF, U.K.

QSL info for II1R. The QSL Manager for II1R is IK1DPA. QSL via the bureau or direct to: IK1DPA, Roberto Rebaudo, via Giovanni Pascoli, 14, I - 18038 Sanremo IM, Italy

UA9AJ and RW9USA Callbook addresses are INCORRECT. All QSL requests should go ONLY to UA9AB -- either via the bureau or direct: Gene Shcumat, PO Box 17, Troitsk, 457100, Chelyabinskaya OBL, Russia.

THE CORRECT QSL MANAGER for AH8A is AC7DX (POB 25426, Eugene Oregon, 97402). W6OSP has been getting many cards by mistake. He is NOT the manager. AC7DX has the computer logs back to 1994. QSL direct.

Brett, VS6BG, advises to have patience for his VS96BG cards as his travel schedule has been hectic. He also states VS6 stamps will no longer be valid after the July handover.

Martti, OH2BH, reports all U.S. direct requests for XX9X, XX9TR, C21BH, and XZ2BH were recently mailed. The rest of the world is also currently completed while the JA QSL cards are still in the process. Logs will remain open until the end of June. QSLs will be answered next time at the end of August. In November, all the remaining QSOs will be QSLed through the QSL Bureaus. Please send your request in June for a quick turnaround to: Martti Laine, Nuottaniementie 3D20, 02230 Espoo, Finland.

SP, POLAND. Look for Special Event Station SN9JP to be active between June 1-15th, to celebrate the visit of Pope John Paul II to Poland. Activity will be on CW, SSB and RTTY with operations on 80 to 10 meters. Look also for 2 meter SAT activity. Send QSL cards via SP9PKZ or bureau. Also, remember that 3Z0JP (see OPDX.304) is supposed to be active now until June 15th to celebrate the visit of Pope John Paul II to Poland. QSL via SP6GVU.

SV5, DODECANESE. A Hungarian group will fly to the Island of Rhodes (EU-001) and will be active June 3-17th. The members of team are HA0HW/ Laci, HA4GDO/Tomi, HA6NL/Laci, HA6PS/Zsolt and HA6ZV/Tibi. They will be using their calls with SV5/ prefixes and /p behind the calls. They plan to be active on all HF bands from 160-10 meters on CW, SSB and RTTY, too. Their suggested frequencies are:
CW - 1831, 3511, 7011, 10101, 14011, 18074, 21011, 24891 and 28011 kHz
SSB - 1841, 3789, 3789 (3611 for HAs), 7089, 14189 (14260), 18141, 21289, 24941 and 28489 kHz
They also want to work on the satellites such RS-10 12, RS-15. Their down link will be 29421/29441 and 29321/29341 kHz. They will try to work on 2 meters as well. They will run two separated stations on HF bands at the same time in hopes that everyone who wants to get SV5 on a wanted band and/or mode can work them. They will answer all QSL requests by the way they are received (if arrived via bureau they will go out via the bureau and if they are received direct 'with the appropriate cost to return postage' they will be answered direct).

Meanwhile, also look for SV5/OM3LA to be active from Kos Island from July 9-23rd. Planned activities will be on CW/SSB/RTTY and on all bands. QSL via OM1APD.

T33, BANABA ISLAND. Ron, ZL1AMO, is reportedly back home in Auckland and was not able to get to or be active from Banaba due to transportation problems.

TM0, FRANCE. The callsign, TM0RSE, will be reactived once more on the weekend of June 6, 7 and 8th. This special call is used by a group of French morse code enthusiasts during important celebrations. The Allied invasion in Normandy is such an occasion. The station, installed in the tower of the "Chateau de Creully" (Calvados), will be operating on all H.F. bands from the same location used by BBC news correspondants reporting Allied war operations during the Normandy campaign in 1944. QSL TM0RSE via P.O. Box 22, F-14480 Creully, France.

VK0, MACQUARIE ISLAND. Tom, VK0TS, was heard last week (May 26th) at 0530z on 14260 kHz with Jim, VK9NS, running the show. There are mixed reports on his signal strength from different parts of the world indicating that very few were able to hear him or that he was very strong. Keep a listening!

WEBSITES TO CHECKOUT.....
Tom, K8CX, reports he took 103 photographs at Dayton this year and now has ALL of them up on his Web-site. If you were at the Crown Plaza Hotel, you probably will find yourself in one of these photos. The WEB site is: http://paradox2010.com/dayton97/
Tom is also starting a Ham Gallery web page with pictures of individuals, ham shacks, antenna farms, etc... Please read the info about sending photos on his Dayton97 Web site mentioned above.

HAM/COMPUTER/ELECTRONICS classifieds are available to you on the World Wide Web. Just visit THE VIRTUAL HAMFEST at: http://www.vhamfest.com.

XU, KAMPUCHEA. XU2A and XU2FB were heard active this past weekend. XU2A was heard on 14195 kHz between 1230 and 1500z. XU2FB was heard on 14002 kHz between 1745 and 1900z; and on 14228 kHz at 1244z.

YA, AFGHANISTAN. John, PA3BTQ, who was recently active as S21/PA3BTQ, is now working for the Red Cross in Afghanistan. His callsign, operating frequencies, and length of stay is unknown at this time. QSL via homecall.

ZK1, NORTH COOK ISLANDS (DXPEDITION UPDATE). Tom, K8XP, informed OPDX the team of operators have now been finalized with the addition of Chris, ZS8IR (former operator on Marion Island), and Mike, N6MZ (was one of the team on Heard Island). Mike and Chris will join N4RF, WA4YBV, N7RO, KI6AN and K8XP to complete the team of 7 operators. Their callsign on North Cook will be ZK1XXP, and the QSL route wsll be announced later. The following have also been added to the list of supports: NCDXF, Alpha Delta, DX4WIN, Heil and Astron. All equipment will be assembled at N4RF's QTH in early June and shipped by the 17th. DXpedition dates are currently firm to take place September 20-27th, with 3 stations functional to include RTTY.

ZX7, CABO BRANCO LIGHTHOUSE (Brazil). From June 14-15th, ZX7CB will be active. This station is currently 1 of 65 lighthouses good for the Brazilian Lighthouse Award (DFB) and counts for PB-01. Activity will be on the following suggested frequencies:

SSB - 3750/3760, 7060/7070, 14200/14220, 18130/18140, 21200/21220
and 28440/28450 kHz
CW - 3500/3510, 7015/7030, 14050/14070, 18070/18075, 21140/21160
and 28150 kHz
QSL via: PR7CB, Jorge, PO Box 008, Joao Pessoa/PB, 58001-970, Brazil.
For more information via E-mail contact: pr7rt@openline.com.br

ZW100, BRAZIL. To celebrate the 100th anniversary of Belo Horizonte City,
look for ZW100BH to be active now through December 14th (1997). Activity
will be on all modes and bands. QSL via PY4AA: LABRE/MG, PO Box 314,
Belo Horizonte/MG, 301323-970. For more details send E-mail to:
marcus@gcsnet.com.br

OK. So here is the bottom line. You go and put your money where your keyboard is. It will cost you a minimum of about $2.8 million to just get your idea off the ground; ie: start-up and advertising costs. You sure will not reach the masses here on the USE(less)NET And if a year or two from now you even show a modicum of success we will report it. I have the feeling that a year from now that none of us will even remember that you were here.

4526. Starved Rock (Princeton) hamfest

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-01 00:00:00 UTC
From: rawiley@blue.weeg.uiowa.edu
Message-ID: <rawilex.865207412@xblue.weeg.uiowa.edu>
Source record: 196767

.

Princeton hamfest was today. Sunny day, temps. in the high 70s. Great turnout. This is a fairgrounds hamfest with plenty of parking space, and it was all filled to near capacity.

There was not one full line new equipment dealer present, A couple of part timers with a little VHF/UHF gear, and some guys selling CB stuff at what looked like ridiculous prices, I'm guessing bootlegger eqpt. but no professional ham dealers.

It looks like the 800 number mail order outfits have completely captured the market.

Once again, I see the Carl Stevenson Fact Generation subroutine has
gone buggy again.

Exactly which hams "fight...new technologies from being used?"

Are there any anti-satellite groups? Is the "Cry Plover for the Clover"
organization kicking up again?

Choosing not to use a "new technology" is not fighting like hell to
keep it out... If you want to go use your new technology, more power
to you... Most hams I know feel the same way too.

Before you can do this, you have to modernize the rules of operation
on the bands to permit technology to be used by hams, in an effective
manner. Once hams are allowed to use advanced technology on various
bands (such as > 9600bps on HF etc.) then manufacturers will start to
make some of that commercial technology available to hams in higher-priced
rice boxes.

>
>I don't like the NEA either but requiring a cw test at 13 wpm in order
>to be able to operate SSB or AMTOR on 20m I consider wrong!!

This isn't what I asked you. I asked you why you felt it was wrong to
require a minute of solid copy a "step backwards".

Would be it a "step backwards" if we required people taking theory
examinations to answer "fill in the blank" questions? e.g. "The amateur
extra CW upper band limit on 75 meters is _____ mhz". This is
effectively what requiring a minute of solid copy achieves.

I believe that lowering the speed requirement while going back to solid
copy is a step in the right direction. Of course, you can argue that
the "solid copy" is 'harder' than the "multiple guess", but only if you
are looking for an examination hand-out in the way of "gimmee points".

Talking about math skills, I visited Kinko's last week to make some copies. Was handed a scratch and win game card (mine was not a winner as usual). But I looked on the back of it and at the bottom it said something like "Canadian winners must answer the following problem". And said something like multiply 88 by two and multiply that by four and subtract something and divide by two". I thought that real odd. I discarded the ticket so I do not have the exact equation. Just curious why that would occur in a contest of luck.

4537. Code - Tutor suggestions

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-01 00:00:00 UTC
From: dirwin@imap2.asu.edu
Message-ID: <Pine.SOL.3.91.970601214222.25325D-100000@general5.asu.edu>
Source record: 196778

I am in the process of learning code for my tech-plus upgrade, and hopefully shortly thereafter, general upgrade.

I have a shareware code tutoring program, but I'm not home enough to use it consistantly, as out of town travel seems to make the PC rather useless (as it sits on my desk).

I would assume there is a portable code tutor out there. Can anybody shoot me a brand name. I'd appreciate comments as to how well these might work, and any benefits or problems associated with it.

Thanks, Dave

>I am reluctant to endorse a pure operator type of license using
>reduced power and commercial equipment only.

I know that the danger with requiring type accepted equipment for the
entry class is that this requirement might later on be applied to all
classes. Apart from this risk, I see no reason why introducing an easy
entry level license would harm the possibilities for technically
competent people to experiment (in a full privileged license class).

For the entry class I would suggest a power limit around 100 W for
commercial equipment (most commercial gear will fit in) and maybe 10 W
for homebrew equipment (most QRP kits would fit within these limits).
Even with slightly improperly adjusted homebrew equipment, the
unwanted radiation levels would still be manageable.

>I'm aware that
>Canada does this, but the US already has such a radio service,
>it's called CB. Is that what we want amateur radio to be? Apparently
>people like MD do, but I don't think it meets our charter goals.

The problem with using the CW test and the technical test as a means
of psychological screening is that we do not know if it really is
keeping bad apples out. Is the ratio of bad apples among those who
have passed these test lower, compared to the ratio of bad apples in
the general population (or the CB user community).

Over here, the best return of investment for an advertising campaign
for ham lessons is from the CB community and it has been increasingly
harder to attract people without CB background.

If this trend continues, the end result will be that ham radio will eventually be taking over by ex-CB people.

However, this trend can be reversed, if we can also attract other types of people with different background and different interests. To be able to do this, an entry class must exist that would not require too much effort from an average man on the street to obtain the minimum knowledge for casual use of ham radio. The privileges must be limited so that the limited technical knowledge does not harm the person in question or other people. To understand the regulations, some technical knowledge is required, but there is not much need for component level knowledge.

This entry level license should be sufficient to most casual ham radio activities, but for serious activities (such as serious contesting, serious DXing, EME or repeater building and maintenance) a full license should be required with a considerably more harder technical test than the entry class test.

Replace the battery.

I have a 94 Chevy Impala SS and keep several Motorola Maxtrac radios on
24 hours a day. The battery holds up fine unless I Deep discharge it a
couple of times...leave the lights on or leave the radio equipment on
for an extended length of time (4 or 5 days without driving the car).
The stock Delco Freedom batteries DO NOT like to be deep discharged.
Once or twice is enough to permanently damage them. If you are really worried about it, get a deep
cycle marine battery and a battery isolator and run the radio equipment
off of it, and leave the starting battery alone. Also if you do leave
your equipment on for an extended period of time and drain the second
battery, your truck will still start.

Well, it is time to bust your chops a little bit, Carl. Have you looked
at the new Kachina radio? It upconverts to 70 MHz then direct converts
to a 40 kHz DSP IF where all processing, filtering, and demodulation
are done. It is totally controlled by the PC, it has no knobs, buttons,
or displays of its own.

There's only one reason it upconverts, and that's to get a satisfactory
3rd order intercept and adequate dynamic range. Now here comes the
chop busting. What's the 3rd order intercept of your I/Q radio? What's
its dynamic range?

I know from my own experiments that I can't yet get either a 3rd order
intercept or a dynamic range comparable to the better Japanese
superhets with my direct I/Q design. Somehow I doubt you can either.
HF is a bugger bear when it comes to both of those parameters.
That's why military and commercial receivers for HF are still
superhets.

>minute straight instead of the current system).

Sigh. Why is requiring a minute of solid copy a step backward? Because
it makes people demonstrate that they can actually copy CW, rather than
just copy 75% and guess correctly on a multiple choice examination?
Perhaps you'd rather use an NEA "outcome-based education" approach to
CW examinations, where nobody fails, as long as "they feel good about
themselves and the answers they give" on the tests? Or, maybe you want
to make the CW examinations more like:

Q. What was the sending station's call sign?
(choose the best answer)

A 1. J1APL
2. X2FUD
3. N0GUD
4. AA00D

>>And... Let's say, for sake of argument, that a majority of people
>>who joined your organization supported continued CW testing... What
>>would you do then?
>
>I am in favor of continued CW testing for HF as long as the treaty
>stands. After/if the treaty is changed then we will need to change our
>license testing to reflect the new treaty.

That wasn't my question. My question to you was what would you do if
a majority of your members wanted continued CW testing. Your whole
rationale for creating this organization is you want to forward YOUR
own political agenda. What if your membership determines they want
policies on issues which conflict with YOUR ideas? Is your organization
a dictatorship, where your "members" should shut-up, pay the bills
and let you do what you want; or, are you a membership-oriented
organization, where your organization's policies are going to reflect
the will of the membership?

>treaty I will propose at WRC-99 (if I am there) that the treaty be
>amended to say that no nation shall require a code speed exam in

>that is there right to do so. But 5 wpm shall allow a ham access to
>every HF band for at least the voice and digital modes of operation.

This would seem to be a step in the wrong direction, since the ITU
treaty doesn't mandate a minimum code speed now. Technically, you could
amend the US licensing system to require a 1WPM aural examination and
be in compliance.

>Working under the present treaty I would drop the Novice and Tech Plus
>classes of hams. Then I would propose a 5 wpm code test for the
>General Class license, instead of the present 13 wpm exam. For the
>Advanced and Extra classes I am willing to consider other test speeds
>and ideas. I like 10 wpm for Advanced and 15 wpm for Extra Class.

The amateur licensing scheme is certainly in need of repair, but your
direction is completely off-base.

No Bill, you missed my point. Of course the pizza autopatch example
is controversial, exactly because it demonstrates my point. People
know about the "business use" rule, and they debated it vigorously
to the point where it was clarified. Why was it controversial? Because
people were familiar with Part 97, and each person has his/her own
interpretation of what was "right".

To the person without the requisite foundation, it would have never
been controversial, since nobody would have given a second thought to
referring to Part 97 because "it might be an infraction".

Correct. There are a few, a very few, things which must be memorized.
These are called axioms in mathematics and cannot be derived. There
are a few similar assumptions in physics which must be accepted.
Everything else follows logically from that. But what I see is lots of
cookbook mechanization on our tests. That sort of mindless turn the
crank is of little or no value. We need our applicants to be able to
reason conceptually about radio phenomina and electronic circuit
behavior. This equips them to deal with the changing technology.
The problem with the way we've done testing is that it concentrates
too much on the minutiae of specific technologies and not enough
on the larger conceptual principles upon which all technology is
based.

>>Now I'm not a fan of memorization myself. For things like band limits,

>pizza autopatch really constituted business use.

Of course one should read through the rules to get an idea of what
they are about so that when detail questions come up, one knows
where to look. But this is very different from rote memorization of
Part 97 sub-band limits and the like. Those can change tommorrow.
I'd much rather have the applicant demonstrate that he knows how
to access the current information rather than showing that he has
memorized one static snapshot of the rules and regs.

>>Now the principles underlying theory have to be understood, but that

Well, if you've been taught how to use the dictionary, you *can* very quickly
deal with things like that. In other words, if you know the principles on which
the dictionary is organized, and have a rudimentary grasp of the way English
words are formed, you can use the dictionary to find the spelling of a word.
That's exactly the kind of skills and knowledge we should be looking for on
amateur exams. If you have the prerequisite rudimentary math and science
background, and a conceptual familiarity with the material pertaining to radio,
you can very quickly use your reference materials to pin down an answer to
a real world question.

I like to think of books as auxillary long term memory storage devices. There's
no reason to burden my wetware memory with details I can quickly access in
my reference materials.

>>If the US entry license were like that of Canada, I'd agree with you.

>knowledge of those individuals in it, not force people who don't want
>to clutter their minds when a bunch of useless information to become
>sufficiently acquainted with it so they can pass a test.

Well, that would be one approach. If we want to keep the tests very
rudimentary, we need to limit privileges accordingly, IE low power,
Type Accepted equipment, forbid homebrew, etc. I don't think that's
a very good idea, however. I'd prefer to bring the tests up to match the
knowledge needed to exercise the privileges currently granted in a
safe and responsible manner. That level is attainable by a bright
9th grader, or any adult of normal intelligence, without much struggle.

As I said to Glenn, just how stupid do we want amateurs to be anyway?
I think we can't afford to have them be so clueless that they can present
a hazard to themselves or others.

>>It is not my intent to generate explosive growth in amateur radio.
>...
>>Our current problem is not a lack of numbers.
>
>Well, I'm glad someone on the anti-code segment is acknowledging that...
>It seems one of those "anti-Morse-Myths" is 'we need to flood our bands
>with new blood to save them'...

We need to address our demographic problem. But we can do that with
growth rates near our present Tech growth rates, if we can attract the right
sorts of applicants. And we can restore the technical level needed to pursue
amateur radio in accordance to our charter goals if we can attract the right
sort of applicants. We don't need great hordes of people, poorly skilled in
relevant prerequisite knowledge. But we don't need a bunch of archaic
telegraphic experts either. That doesn't benefit the nation, the service,
or the individuals involved.

Our demographic problem is that the only class showing healthy growth
and improving demographics is the Tech class. But Techs aren't considered
"real hams" by large numbers of amateurs, even some of the Techs themselves
don't consider themselves "real hams".Yet they aren't upgrading, and their tested
skill levels are inadequate for the privileges they already hold. We have what is
quickly becoming two separate amateur radio services. One is relatively young,
vital, and growing, albeit somewhat clueless, the other is much older, stagnant,
and declining in relative numbers as well as being mostly outdated in their skills.

Now if we keep our current license class system with its baroque sub-bands
and privilege levels and just upgrade the exams, we won't attract the numbers
we need to rejoin these two amateur radios. We also need to overhaul the class
system to make privileges correspond more closely with the relevant materials
mastered. It has to be a package deal or it won't work. Not only does the system
need to be relevant and equitable, it has to be *perceived* by the intelligent layman
looking in to be relevant and equitable. That's been a major failing of Incentive
Licensing, IE granting unrelated privileges for passing faster Morse tests is
illogical, irrelevant, and inequitable. That's obvious to anyone looking in.

There's no rational excuse for having six amateur license classes when nearly every one of them has similar privileges on similar spectrum, yet they have vastly different testing requirements. Ideally, we only need one license class. Almost everything the government can legitimately require us to know, *every* amateur needs to know. So there is no reason for six different classes. We probably can't achieve that ideal, but we should recognize it as an ideal and try to approach it as closely as we can.

>in the attempt. That's totally irresponsible.

I am in general agreement with the bulk of your post Gary, as I've made
similar comments in the past, but I need to clarify your last point.

Jessica Dubroff was *not* a pilot and she most emphatically was not
responsible for killing herself, her father or her instructor. FAA
rules do not recognize a minor as a pilot. Minors can take flying
lessons, but the instructor is *always* the pilot-in-command (control
operator if you like) and had *complete* responsibility for the
safety of flight. A minor may not solo until much later (I think
their 16th birthday) and is certainly not eligible for a pilot's
license before then. Minor's operating the controls are relatively
safe, due to the dual control setup in a plane unlike the single
controls in a car, because the actual pilot can always (and *must*
exercise the responsibility and authority to) take over control.

The Dubroff incident was a publicity stunt. The poor child could not
possibly have had enough awareness of the dangers and risks associated
with the event and was not capable of making life/death decisions as
implied by holding a "pilot's" license. The forensic evidence at the
crash indicated the instructor had control at the time of the crash
(broken wrist bones) and that Jessica did not. Her instructor, and
also her father, killed themselves and her. The NTSB recently
released their report saying just that (that the intructor blew it).

Unlike the FCC, the FAA licensing system does not sanction the issuance
of a license to any person, aside from the issue of statutory age
eligibility, who does not attain a real understanding of rules,
aeronautics, operations, and procedures. In addition to a written
exam, a pilot candidate must also pass a comprehensive oral exam, and
the examiner is charged with identifying any failures of knowledge or
understanding during this oral exam. In other words, if the examiner
determines you know what you are talking about in one area, he will
skip ahead and probe for weak spots in another area. This is much
like what happens in a Master's degree or PH'D degree oral candidacy
exam - the examining committee is always looking to make you sweat
and find out what you really know *and* don't know. The fact that

the FAA can make the oral test work is one reason why I have proposed the same for a revision of upper level or all ham tests.

Also the actual checkride demonstrating flying skills requires that *all* tasks be completed satisfactorily, otherwise it is an automatic "pink slip" (failure). Completing even 99% of the tasks isn't good enough. The difference between satisfactory performance and superior performance on any task is allowed, but a *gap* in skills is not.

The contrast between the rationality, relevance, and effectiveness of the FAA licensing system and the irrationality, irrelevance, and ineffectiveness of the FCC licensing system couldn't be greater if you tried. Getting back to ham radio, the idea of a 5 year old Extra is another example of that irrationality. The difference is that the FCC really did issue the Extra license, unlike Jessica Dubroff who never held a pilot's license except due to the media's usual botch of misinformation.

>
>How much time did you spend composing this message? How much time do
>you spend reading UseNet each day? If you used that time to study
>code, you'd be ready to take your 5wpm test in no time.

Gee.....I did not know that A. T. Phillips was the issue. You seem
to assume that I spent a LOT of time composing this message. I did not, I
happen to be blessed with the ability to think. I spend only a small amount
of time on usenet (on a PC I built). I spent a LOT more time on the code.
You seem to assume a lot of thing that you do not know. Facts I can
respect, innuendo and assumption with a personalist slant I cannot.

>Yeah, code is
>outdated, a royal pain in the axx, and should probably be dropped from
>the Amateur Radio requirements. But you CAN learn it. Go for it,
>man. You won't be sorry.

I will give it another try when I am good and ready. But I ask that
NOT assume how much time and effort I put into learning code. If you want
to know, ask me. When I was studying code I was doing nothing with my
computer at all. You asserted that my time on computers could have been
used for study time, getting me "over the top". You assumed incorrectly. I
used that time just for that and failed none the less.

Now how about we get back to the issue and away from me ?

Try your best not to memorize the letters as a series of dots and dashes. Try to memorize the sound of the letter, as transmitted. I'm sorry if this repeats what others have said.

When you can recognize all the characters by sound, and are tired of trying to copy, listen to code faster than you can copy without paying much attention - just have it going on, even if you are doing something else.

Why did you lie Burt. You are a liar, you cannot be trusted I did not say what
you quoted I said.
I said and I quote:

"On another note someone quoted that there is a difference between amateur
and professional communicators, He's right, Professionals communicate
because they get paid . Amateur's communicate because they love it."

You Burt are a fraud, unless you would like to take it back and ask for
forgiveness for your wrong doing. I did not say what you said I said.
You can now be no longer trusted by the Amateur Community. You mis-
quote someone for your own personal gain and the guilt you feel about
what I have said about service. All I have quoted is Part 97 and you
don't like it. You wonder why we have problems on the bands, well
you are contributing to them.
These other quotes that you have with your signature and such, are
they a lie also? Cry wolf some more Burt, we will not believe you.
If you would like to Publicly say your sorry for misquoting me and
ask for forgiveness then maybe we might think of you as having
something to say that might help amateur's instead of tearing them
down.

Adam, with respect: you brought your personal experience into it. I certainly don't have any criticism, but if someone responds why be upset with them? You say you could learn the code if you "had to". At this point in time you do have to in order to have access to the hf bands. If you choose to devote your time to other pursuits that's fine. Those are obvious observations. I would only note that if you had chosen to devote the time, by your own statement, you'd have it over and done with, with at least the theoritical possibility of obtaining your father's call (sorry, haven't looked it up for availability) through the vanity call program. That would be wonderful. In fact even a technician license (without the committment of time to learn cw) might allow for that.

I was fortunate enough to complete college in roughly the traditional manner. Some of the people that I work with do not have degrees, but recognize that college, while not guaranteeing anything, can be important in career success. College has little direct relevance, some of them believe, to their lives today. Just a "piece of paper". The reactions range from, take consistent steps to get it done and move on; talk about doing it incessantly but take no action to bitterly complain about the success of those who have that recognition of effort. Reminds me in some ways of these discussions here on usenet.

Good Luck to you in whatever you choose to do.

Sounds to me that i must be hitting a nerve. The old hams (pro-ARRL)
(pro code) seem to be really upset about me wasting my time and money.

It is my time and my money. I think it will be an interesting
opportunity to give something back to ham radio.

All the "EXPERTS" said Newt could NOT become Speaker of the House
either. But He did it. He returned power "to the people" who pay to
run this country and who lead this country.

Why waste time telling me that it can not be done (modernize the ham
licenses). Instead lets fingure out how to do it and do it. The ARRL
represents less than 30% of US hams. The numbers are there to make
possible a real change in US proceedures.

It might not happen this year or next. It took Newt a few (several)
years to return Congress to the people.

Boy I love it when someone tells me that I can NOT do something. It only makes me more determined to do it.

I say again, there are now 740,000 hams in the USA. New hams are mostly Techs and don't join the ARRL. The ARRL has less than 200,000 members. If I can sign up most of the new techs every month and 250,000 of the existing hams I will be recognized as a major US ham organization and will be in Geneva. If I can't get in then I will be outside talking to CNN and other foreign news people about why I can't get inside. Because they (ARRL) are afraid of me and what I represent ... change/improvement.

Did you happen to see the movie "Independence day"? Hams were
featured for helping to save the world against the aliens.

I think the foreign newspeople would love a story about the United
States government trying to keep out US hams.

> >>what I'm proposing would be a slight challenge to an average or above
> >>average 9th grader. That's at least 7 intense years below an EE level.

I agree with Gary 100% on this ... the "Gary, Carl, and others want to
require EE level knowledge to get a ham license" is just another pile of
procode crap, designed to engender fear in the hearts of the appliance ops
and gamers ...

While I think it's safe to say that many of us feel that the theory test
should be more rigorous ... (1500 W is irresponsibly generous for someone
who has only passed the current Tech test) ... we are NOT trying to
"simply substitute (our) filter for the CW filter" ... we are NOT trying to
make the entry barrier so high that only "technocrats" can clear the bar
... we are NOT "trying to promote technical eletism" ... ALL that we're
trying to do is to promote a rational set of tests that actually test for the
level of knowledge and skills necessary to assure the minimum level of
technical competency to operate safely and without serious risk of
causing major interference problems to other services ... today's exams
fall FAR short of that minimum standard ...

We don't license 8 and 9 year olds as drivers ... in most states
the minimum age for a driver's license is 16 ... because it is
assumed that one must have reached at least the level of maturity
and responsibility to be able to safely and responsibly operate a
motor vehicle ... I personally see no compelling need to create a
ham licensing system that is so dumbed down that 8 and 9 year
olds can obtain a license at all, let alone at the highest levels ...
perhaps an entry-level permit, with some assurance of parental
supervision (like the way parents have to "sign off" on their kids
application for a learner's permit to drive ...) would be more in
order???

> >As I keep pointing out, we should not exclude younger hams.

I agree, with the caveats expressed above ...

> >The
> >ticket should be an INVITATION to learn, not a reward for learning.

This is absolutely correct ... the class-conscious caste system that
we have now attempts to reward learning, but it's emphasis is all wrong
and it's motivation misguided ... the entire thing in most respects is
oriented to pander to the emotions of the gamers ... it perverts learning
into yet another competitive sport, with another certificate as the reward.
This is counter productive because it encourages the mindset that says
"what additional award can I get for myself if I make the effort to learn x"
rather than "wow, wouldn't it be neat to know more about x?" In the case
of Extras, there seems to be an implication that "they've learned all there
is to know, so they can now retire to the shack and stagnate with impunity."

> >Many of us had little interest in electronics until AFTER we got the

> >>of the regulations they are supposed to obey?

Hey, in the case of MD and others in the "it's just an appliance operating
hobby, no need to learn any of that technical stuff" camp, I think it's
pertty clear that there's a big "misery loves company" factor at play ...

> >An exaggeration of my position; a strawman which needs no rebuttal.

> >>I don't think it reasonable that an exam couched on the level of a bright
> >>3rd grader can be either. In fact current exams are worse than that, with
> >>a 5 year old holding an Extra ticket. Now that's worse than absurd. That's

> >>obscene.

It sure is, when you consider the fact that folks like Cecil's associate with
a PhD are "not qualified" in the eyes of that licensing system ...

> >I disagree. That 5 year old has a ticket to a lifetime of fun and
> >learning. What qualifies you to deny him that opportunity?

How about the fact that there's no way in hell that the kid has the
level of emotional maturity to excercise the good judgement and
self control necessary to operate at the level of priveleges that an
extra class license grants ... and that's assuming for the moment
the unlikely, unsupported assumption that the kid is some sort of
prodigy who can actually comprehend all the theory ... which I tend
to doubt ... I believe the kid is bright ... but I don't consider it likely
that he/she is truly "qualified" in any reasonable, rational sense of
meaning ...

My elmer William "Bill" Rose died last month and I can say he was a saint who was the best code man I ever knew. Billl taught the code like no one else could. The man could copy at 50+ wpm and with a typewriter. He taught me the code and I will always be grateful. God bless you Bill. Casey N4GKS.

Yes, to the limits of the information I've received so far ... which has not
been in-depth enough by any means ... I am hoping to be able to discover
more ...

Before I continue, I would take the opportunity to point out that
Kachina's heritage is in paramilitary and commercial gear, not
in the ham market ... their founder was also the founder of a
similarly-oriented company where I worked in 1975 designing
such gear (paramilitary/commercial) gear ... I would expect
more of them than of the rice-box folks and have no reason
to doubt that they have made some very good design decisions.

> its dynamic range?

I don't recall ever stating that my system *required* a direct conversion
approach, only that it could support it (where appropriate to the other
system considerations ...) In fact, in many instances, I would agree
with you whole-heartedly that an up-conversion and some early
bandlimiting would be entirely in order if one wishes to obtain the
highest possible performance in terms of IP, spurious, and dynamic
range ... though component technology does seem to be improving
somewhat and the case may not be so compelling in the not-too-distant
future ...

However, a single up-conversion is a far cry from a 3-4 conversion
superhet ...

That is true. but right now the FCC and ARRL set 13 wpm for the
General class license. Voice and data on most HF bands.
If the treaty says that 5 wpm is the max required for general hf
rights the FCC would need to change the General here to 5 wpm or be in
violation of our treaty.

Because we're not important enough ... there are not enough of us, nor
enough money involved on a global scale to get the ITU to change the
way it does business ...

This does NOT mean that we can't have an influence, but in order to
do so one must understand how the system works and how it can
be influenced ... one cannot expect to walk in and announce one's
self to the global community, saying "Hi, I'm Leslie and I'm here to
demand the following changes ..."

Yeah, yeah ... and I've got a bridge between Manhattan and Brooklyn that
I would like to sell you, too ... if you *really* think that *anyone* "returned

power to the people" you *really* have been flim-flammed ... don't get me wrong ... I don't dislike Newt particularly ... I'm just too realistic and in touch with the political realities to have cannonized him as you seem to have.

Consider the Pocket Morse Code Tutor by MFJ Enterprises.
It's very portable, can be programmed, has Farnsworth, takes a standard
stereo headphone input so you can use your 'walkman' phones.
The PC code teachers are very good but have one HUGE problem - you need
to sit in front of your PC to use them. The secondary problem with
PC-based instruction is the visual dependency on the program. With the
MFJ Pocket Morse Code tutor you learn code by how it sounds.

I think the point here is that we as amateur's should be telling the
manufactures what we need. Like new dsp technology, mpeg, high
speed data, high compression, digital audio/video, etc etc. All
of these are already availiable from professional communicators.
The problem with the amateur community is we get carrots such
as 9600bps dangling in front of us and we do cartwheels. 9600bps
doen't do anything in comparison to what can be done. We should
not buy anything from the manufactures till they give us what we
need. Money talks, I'm not saying to boycott the manufactures but
at the very least we should let them know that we are tired of
what we are getting, and let them know what we do need. If they
do not respond to this then maybe boycotting is the answer.
We (amateurs) can not advance the art on our own anymore.
The technology and cost of building has far outreached the
normal ham. So advancing the Art has to take a different route.
Service and advancing the Art will take us into the future,
accepting carrots will let the spectrum fall to the advanced
technology who needs it.
I think a wake up call is in order for amateurs.

Sounds good to me, however, we're not talking about taking an
airplane and plummeting to earth here.

Amateur radio definitely needs an entry-class license for non-technical
people. This license should include a broad range of privileges on all
amateur bands, with limited power output and restrictions to commercially-
made equipment.

Gary and other technocrats feel we have to make the hobby technically
oriented. I disagree, in the respect of who we are attempting to appeal
to.

If someone says to themselves today "I'm interested in electronics",
they are more apt to become involved with computer systems than amateur
"radio". Yes, electronics are electronics, regardless of how you
utilize them, but the perception problem with amateur radio is the
"radio" portion of the name. Amateur radio is passe as a hobby, just
as broadcast radio became passe' over time with the introduction of
television.

Instead, we need to attract younger people, have them get involved
in the hobby, and see firsthand how "cool" some of the things are.
However, you can't attract them if you need them to go and study
college-level electronics theory. Rather, they should have a basic
understanding of safety issues, operating issues, technical issues,
and the rules and regulations. Armed with this, let them on, learn,
and hopefully encourage their sense of curiosity to want to learn
more.... Then, when they want to learn more, let them study about
specific technologies in use in amateur radio... SSB, CW, FM, and
so on... Take a test on that mode, and gain full privileges for it.

Mode-based testing. Its the answer for both sides.

<3391a97c.2479628@news.nothnbut.net>...
> We (amateurs) can not advance the art on our own anymore.

I disagree wholeheartedly ... as Gary has pointed out on many occasions, more and more of "radio" is becoming software ... for things like protocols that control the behavior of systems to DSP which does the actually mod/demod ... more and more of modern radios is "going digital" ... that the average ham doesn't understand (the technology or the reasons for this change) is pitiful ... that he fights it is dispicable ...

Back to the software part ... as Gary has said, it's an ideal "cottage industry" where anyone with the necessary talent and knowledge can compete quite effectively ...

> The technology and cost of building has far outreached the
> normal ham. So advancing the Art has to take a different route.

That is an absurd and incorrect assertion ... that many hams feel that way is sad and is primarily a result of ignorance of the ways of new technology ... hell, I have everything in the room in which I am sitting that is necessary to design, simulate, and prepare the manufacturing files for my own ASICs ... and more ... I don't have a huge fortune tied up in these capabilities ... in fact a very large portion of those tools were either entirely free or very low cost (say $99 for the package) ... I know hams are tightwads, but let's be realistic OM ... this is NOT "beyond the reach ..."

> I think a wake up call is in order for amateurs.

Yes, that's true, but I get the feeling that what you envision as being necessary may be a bit off the mark ... you are too willing to concede the prospects of hams making true contributions to the advancement of the SOTA ...

4586. @@@ HF + 6M Tranceivers @@@

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-01 00:00:00 UTC
From: masa@writeme.NOSPAMcom
Message-ID: <3391c899.3132043@news.bctel.ca>
Source record: 196834
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello.

I am considering to buy a new HF tranceiver w/6M (+ 2M preferable,
but optional) with a reasonable price. (well... I have to get a morse
code qualification first though. I will try to get a CW qualification
within a month or two... as soon as I finish the school !!)
I am looking around CAN$1500-2000 (US$1100-1500).
The tranceiver must (be):

- All mode TX, All mode RX
- Min. 100W HF + Min. 10W 6M TX
- multi continuous RX
- Antenna Tuner

ie. Kenwood's TS-570S

If there is a used equipment that fits above catagory [must be able to
tune in digital (I am not looking for something that is 10 years old
!!), all mode TX tranceiver], I am willing to pay 50-75% of new
equipment price. I, however, prefer a new one as long as the
warranty is concerned.

Thanks for your help !!!!!

Unfortunately, the ham gear manufacturers are only interested
in making what hams will buy ... like triple or quadruple conversion
HF spur gardens that use the same basic tx/rx architecture that
was used when SSB was in its infancy ... there's been virtually
no real growth or innovation in that technology (with the exception
of replacing VFOs with synthesizers and adding a bunch of memory
channels and other bells & whistles features ...).

Simply put, if hams continue to remain backward and fight like hell
to keep new technologies from being used in the service, then the
rice-box makers will keep making outdated rice boxes for outdated,
technically backward hams ...

Why should the spend any money on developing new products
when hams won't buy them anyway, when they can keep making
money selling outdated technology that they already know how
to do???

Please. The issue of what your technical innovations are is your business. But this no one will buy improvements and mfgs wont make it is really some flight of fancy.

Hey, why not build it and sell it yourself... That's how innovative companies come into being. Is true that to make people displace the in working order items they already have, improvements must be significant, but it sounds like that's what you're talking abt. If you've got something better to offer, lets have it. You'll probably find yourself with some investors too.

Larry,

Was great to meet you too. If you make it to Huntsville in August, Ill
be there.

I agree on the Town Meeting. It went well and we have requests from
conventions everywhere to do it again. The only caviat is that they
will have to pay the expenese for Len, Greg and me. It takes the three
of us to do it and we cannot afford it out of pocket.

RE: Walter Cronkite. Its not new news. We reported it over six months ago including the sound-bite.

Listen to Baxter on 14.313 daily -- he plays it numerous times every day. Or visit his booth at any convention -- or his website (I think the URL is like www.K1MAN14275.org or some such). He has Cronkite on-tape and had his photo and his famed portrait line drawing (made fameous on the CNS Evening News intro) and endorsemnt at his booth at Dayton (Booth 508 as I remember).

Or, write Baxter at his Callbook address. He will gladly send you -- or anyone -- all the info you want -- and will do so forever. You cannot stop the stuff. I have tons of it -- all the latest with Cronkites' image affixed there-to!

I doubt if he will just"go away" as he is very representative of the wants and desires of many, many like him. And, they are very quickly becomming the numeric majority. All they need is the right organization to make them the political leaders and supremicists.

If he does not succeed, another person will. Probably a person far more militant. Its just a matter of "when" not "if." It is no longer "Code vs No-Code." It is "get even with the coded hams for their repression of the no-code hams." In other words, you are in the middkle of a war that you have not yet recognized as a war.

Re-read this note in 2 to 3 years when we who have passed CW tesrs are totaly subservient to their every whim and see if I am not 100% correct.

But the pizza ordering example is not a good one because it
was always a controversial situation and didn't have any clearly
defined position in the regs. Many hams never belived it was
a business use even before the FCC cleared things up.

Gary Coffman wrote: "In our school district students learn logarithms
in 6th grade..."

Hi Gary - Please provide for me a contact telephone number of your school district. To be taught logs would require that they know about functions and their inverses. Since the log fcn is the inverse of the exponential fcn, these 6th graders would also have to know all the properties of the exponential fcn (all the properties of the log fcn fall over from those of the exponential fcn). These 6th graders would also have to know that the exponential fcn is one-to-one so that it does have an inverse (which we call the "logarithm"). They'd have to know that the domain of the exp'l fcn becomes the range of the log fcn, and the range of the exp'l fcn becomes the domain of the log fcn. They'd have to know about strictly increasing and strictly decreasing functions (which is an alternate definition of "one-to-one").

All the above is the preparation for learning about the logarithm; if they don't know any of the above, then they aren't being taught logs.

Phone number, please.

>
> Carl - wa6vse

I need to explain something before I go on. I believe code should be a choice and not a requirement and that the license structure needs to be changed. Carl, does this sound like something you agree with or am I trying to cram something down your throat? My FIST # is 2365.

I joined FISTS because as an _organization_ they strive to save CW thru it's utilization and education. I like code, but don't think it should be a requirement. I do want to see that it gets continued use, this is the reason I joined. If some, or even most, of the membership thinks cramming code down the throats of others is the methodology to use, that is their right, but don't paint all of FISTS with such a wide brush. There are no-code advocates who are in reality anti-code (do away with) advocates. Does this make everyone who wants the req. modified someone who wants to outlaw CW? See the problem with such a wide brush.

If both the Pro-Requirement and No-Requirement groups would concentrate their efforts toward working on making sure the FCC has a true picture of what people want, rather then whine at each other and make un-called for attacks, like the one above, on people who will neither change their minds nor have a direct impact on changing the law, then possibly we could get some foward momentum one way or the other.

The ARRL is going to do what is necessary to sell more subscriptions, books and education material. Their not interested in swaying anyones views one way or another unless the trend is toward more profit. Right now, their customers happen to be in favor of the code. Just by the fact that they are subscribers shows that there is at least some small level of commitment to effecting change. While less than 25% of the US ham population, they are the ones who are being the most

vocal.

Please, before attacking a group based on it's membership,
check it's philosphy more carefully. FISTS was not intended to be a
lobbying group, just a SIG of sorts.

The second day of a diet is always easier than the first.
By the second day you're off it.

<lots more rationalization>

With all due respect, you're wasting your time. We already have an organization with almost all the ducks already lined up to do what needs to be done. If you really have enough interested hams to start a new organization with enough clout to actually accomplish something, get them to join the ARRL and GET ACTIVE POLITICALLY. Get involved locally. Write letters, answer surveys, volunteer for a post in the Field Organization. I guarantee you that eventually, the ARRL will listen to what you have to say. If you have enough dedicated hams, you can take over the ARRL and change it to something more in line with your thinking. It'll take a while, but there's a complete turnover every couple of years, so it won't take all that long if you have the troops.

Even Wayne Greene has seen the light in this area. Take advantage of what you've already got, rather than trying to re-invent the wheel.

>was, but he did more for ham radio than a hundred EEs sitting around
>tinkering with fancy new Black Boxes.

Well, given his age and the sequence of his call sign, I can say with some
confidence that he didn't get his license in elementary school. I've talked
to him a number of times over the years, and worked with his station (manned
by volunteer operators) many times back when we were handling traffic for
our boys in Vietnam. I admire him as a person and as a politician, but I can't
honestly say that he has had a great impact on amateur radio. He held a
political position of significant influence, and that was helpful. But as an
amateur his contributions were less than those of a large number of others,
including those who have made major technical contributions.

What I mean by that is that there are a number of people who are known
outside amateur radio for the contributions they made *as amateurs*.
Senator Goldwater is not one of them. He is a famous amateur only
because he is famous for things done *outside* of amateur radio.
Walter Cronkite is a famous amateur by the same measure. Neither
are comparable to the likes of W8JK, K1CLL. Sam Harris, Tom Clark,
or Phil Karn.

None of that stuff has the potential to cause harm over a radius of thousands
of miles. Amateur radio does.

>be a safe driver.

It your valves are misadjusted on your Volvo, the worst that is likely to
happen is that you'll burn a valve and be out a large repair bill. OTOH
if your amateur equipment is out of adjustment and puts a spur on a
VOR or ILS frequency, you could be responsible for endangering the
lives of an airliner full of passengers. The difference in potential for
harm is quite markedly different.

><stats about education deleted>

Pity. It is one of the better tools for understanding the physical world.
As John McCarthy is fond of saying, if you can't put a number to it,
you don't really understand what you're talking about. For many things,
including a large part of amateur radio, that requires at least a rudimentary
knowledge of calculus.

>>>After reading all the qualifications expected here for an *entry

>methods" if I recall correctly.

More precisely such are called amateurish methods (and other things
no longer PC to say in polite company). There is a big difference. Just
because we are amateur radio operators is no excuse for our operations
to be amateurish.

>>reinforce the idea that we've been emphasizing the wrong things in

>So is driving a car while talking on two meters. You can't weed out
>idiocy with a tech test, any more than you can filter out lids with a
>CW test.

I know that. But if we require people to have the tools to avoid idiocy
there is a much larger chance that they will *use* them before they
get themselves, or others, in trouble. Those who have developed the
habit of thinking clearly and logically are more apt to apply that clear
headed logic to novel situations than are those who are blissfully
ignorant muddle heads used to acting in amateurish ways. In other
words, those who have a grasp of calculus are more likely to think
in terms of strength of materials and overturning moments than those
who have no clue about how to look at such things.

>>>We need hams with "people" skills as well as with technical skills.
>>

>>exhibit those latter skills to a high degree, all amateurs need those minimum
>>technical skills because all of them operate transmitting equipment with the
>>possibility of malfunctioning and causing harm to the unwary.
>
>That's hyperbole, Gary.

That's not hyperbole, that's fact. Amateurs can interfere with life safety services any time they transmit if they are not alert to the possibility that their equipment may not be operating properly. That could cost a life, or many lives. It's not something that happens every day, but then neither is ramming a car into a school bus load of children. Yet we need to be concerned about the possibility. We don't test drivers to see if they know enough to detect problems with their brakes, but we should. We do hold them liable if their brakes fail and they kill innocents. Amateurs can be liable for causing harm too. But that's after the fact, prevention is almost always better than assigning blame after the fact.

>>The problem is that the current exams are on such a ludicrously low
>>level that what I'm proposing may seem hard by comparison. In other
>>words, our current entrance exam wouldn't strain a bright 3rd grader,
>>what I'm proposing would be a slight challenge to an average or above
>>average 9th grader. That's at least 7 intense years below an EE level.
>
>As I keep pointing out, we should not exclude younger hams. The
>ticket should be an INVITATION to learn, not a reward for learning.
>Many of us had little interest in electronics until AFTER we got the
>ham ticket.

Of course the exam should be an introduction to a lifetime of learning. That's one of the main purposes of amateur radio. Passing the exam is not a graduation certificate meant to gather dust on a wall. It is a key to the laboratory so that we can enter and experiment and learn. But we can't just let people in the lab who don't know enough to avoid blowing themselves or others up. There must be prerequisites to make sure that those entering the lab know enough to follow good laboratory practices. I don't want 3rd graders in the lab pouring concentrated nitric acid on cotton waste because they don't know any better.

>>I wouldn't hand a loaded gun to an infant, and I don't think we should
>>hand permission to operate high power VHF/UHF equipment to people
>>unable to comprehend some of the potential consequences of that.
>
>More hyperbole.

No. A rogue transmitter can be just as deadly as a firearm, and at much larger distances.

>>Just how dumb do you want hams to be? Must we have exams which
>>those in the lowest 10% of their class can easily pass? Even if that
>>makes them potentially unsafe and unable to comprehend the implications
>>of the regulations they are supposed to obey?
>

>An exaggeration of my position; a strawman which needs no rebuttal.

That's exactly what you're suggesting when you want 5th graders and
below to become amateurs. They don't have the background to handle
what they need to know to be responsible. How can they possibly know
if their equipment is complying with 97.307 if they can't even understand
logs?

>>I think exams need to be sufficient and necessary, no more, no less. And
>>I don't think it reasonable that an exam couched on the level of a bright
>>3rd grader can be either. In fact current exams are worse than that, with
>>a 5 year old holding an Extra ticket. Now that's worse than absurd. That's
>>obscene.
>
>I disagree. That 5 year old has a ticket to a lifetime of fun and
>learning. What qualifies you to deny him that opportunity? He may be
>the next Goldwater, Collins, or even the next Gary Coffman. I'd love
>to see half our ranks consist of grade and high school kids, instead
>of being dominated by rich old white guys.

Do you *really* believe that that 5 year old girl knows enough to comply
with 97.307? Do you think she even understood any of the technical
questions to which she memorized the answers? I don't. She couldn't
possibly understand. She doesn't yet have the background. Unless she's
closely supervised, she's a real hazard to herself and others. From
the QST story it would appear that she *is* closely supervised by her
grandfather, but in that case she doesn't even *need* a license. She
certainly isn't fit to act as control operator of an amateur station on
her own, yet she is an Extra. She could be a VE at your test session.
What's wrong with this picture?

I'll tell you what I think is wrong with this picture. It is just like the little
girl Jessica who was trying to set a record for the youngest kid to fly
a plane coast to coast. She was allowed to do something she wasn't
equipped to handle, and she killed herself, her father, and her instructor
in the attempt. That's totally irresponsible.

With all respect, Bill, that's just about the most arrogant thing
I've read this year. Sure, you work in TV news but that *doesn't*
put you beyond "challange" (sic).

I recall quite well several instances where radio amateurs have been
featured in major Los Angeles television news stories, including a
few of dubious legality where hams have elected to act as newsgatherers
to see themselves on the tube (have a look at Part 97.113(c)).

Quite simply, you're mistaken, which is normally not a big deal, but
then you declare yourself beyond challenge (that's how I spell it, by
the way). If, in fact, you really were the expert you claim to be, you'd
have to acknowledge that TV feeds on controversy, and, with many more news
channels today than twenty years ago, a mob of unruly ham operators
in Geneva would most certainly make the news. Creative news writers
(like the ones that fabricate some of the interesting factoids I've
heard on Newsline lately ;-) would probably mention Kevin Mitnick,
the spectrum auctions, cellular telephone interception, and perhaps
the patriot militias in the story. Perhaps you've missed it, but
radio communications has been in the news a lot lately.

I don't work in TV news, so I won't (mistakenly) declare myself beyond
challenge.

I guess all the ostrich's who say that the amateur service is a hobby
are the very ones who are doing nothing. They are taking for granted
that the spectrum that they are using is still going to be there 20 years
from now. There is only two things that will keep the frequency's we now
have and that is service and advancing the art. You just now compared
cb to amateur radio, and you are right. CB used to be a viable service many
years ago. It is not now, why? Because it has turned into a free for all. With
freedom comes responsibility. CB neglected that responsibility and it has
turned into a farce.
The FCC has mandated Amateur Radio as a service, not
a hobby. Do you think the FCC just gives out spectrum for the fun of it?
No, it wants something in return, it may in some cases be monetary, in
this one it is service. The mandate has four phases of service:
One of them would be public service, emergency communications, things of that
nature. Another is to provide a trained reservoir of technicians and operators
in times of national emergency. A third is to advance the radio art, and the
fourth is for international goodwill.
There has been a lot of talk of us losing spectrum, why do you think this is?

Maybe we are not as important to the government as we once was. Maybe we are not advancing the radio art. All we are doing is arguing with each other. (I'm at fault too.) But the one thing that we could do in keeping our spectrum is by devoting ourselves to the mandate. Providing Service. If we keep up with our bargin, then the FCC must keep there's. But really it is not the FCC who we are indebted to but the Public. The public has entrusted us with billions of dollars of spectrum. They deserve to get there money's worth.

Are we advancing the radio art? Old technology, hams used to be at the forefront. Now we are at the back burner. Goodwill, have you listened to 40 and 80 meters lately. Hobby does not contain responsibility. Because hobby becomes a part of your thinking, you now can blow off any responsibility buy just shrugging your shoulders and saying Oh well it is just a hobby.

This is what happened to CB. It is now happening to Amateur Radio and you all don't see it. Be an Ostrich or be responsible. Advance the art, and bring service to your community. This will save our spectrum.

770-513-6619 will put you directly in touch with the curriculum
development department of our school system. They can tell you
in detail about the mathematical program of our school system.
They can even use ten dollar words instead of plain speaking to
explain it to you too. But they use plain speaking to explain logs
to the kids, and the kids come away with a functional literacy
in the use of logs to solve real problems.

I believe MFJ makes one that only spits code at you if whatever speed or format (qso,random characters, etc) you want. I've seen it and its small and handy. You might also consider an oscillator that will play code to you and also let you practice your sending. Former is in $60 area and latter is abt $25. Going from memory, but both should be advertised in any of the amateur mags...

73 and gud luck

> Has anyone heard of such a booklet?

Yes, and I think I actually saw one at a dealership at home in
Huntsville, AL. Don't have one with me, however.

>
> Any specific advice anyone might have on mobile radios in Toyotas
> would be very much appreciated!

Essentially, the advice was to minimize the exposure of the car
electronics to RF. Methods included separate leads direct to the battery
with fuses in power AND ground at the battery. Twist those leads and
rout well away form car wiring harnesses and car computers. Use good
outside mount antenna well-grounded to vehicle, and absolute minimum SWR,
with antenna wire routed well clear of vehicle wiring harnesses and
computers. There was a power level limit mentioned--around 50 watts for
VHF, I think.

Part of the kicker was a possible legendary "removal of warranty" if the
radio fries a computer.

Our Camry has too old a computer, and blasting it with a whole 5 watts
from a two-meter FM rig had no effect. My Pickup (1982) has the above
mentioned installation used, rund 25 watts on two, and no problems. Your
mileage may vary.

73, Rich KE4GNK

There is no need to thank me for admitting a mistake, it was the least
I could do.
I care very little about a "relationship with fellow hams."
I admitted the mistake not to win points with hams, I did
so simply because it was the right thing to do.

HELLOOOO ANYBODY HOME????? WHO CARES???

IT WAS A MOVIE!!!!!! NOT REALITY!!!

Do you actually believe the stuff you post. I must admit, you were on a
roll in the beginning, BUT NOW...wow, talk about a brain on drugs.

10,000 hams going to Switzerland

Getting an invite to the ITU conference or else having CNN (who won't be
there BTW) publish little known ham secrets???

Floundering a national organization with no constitution, no bylaws and
one that's so top heavy with "officials" that it's bound to turn turtle
faster that the USS Posideon

However, the dues are correct (Free, I believe) But then again, you get
what you pay for.

And besides, what is reality? As the pooper once said

"Give them a light, and they'll follow it everywhere"

If Carl can somehow get Internet News to work without loading MSIE,
it's news (heh) to me. The fact is that Internet News is a part of
MSIE, just as Mozilla is part of Netscape. As I said, it's a wonder
they work with each other at all, given the rivalry involved. And if
"techie" Carl were as smart as he thinks he is, he might have figured
out that both of those things are about as "non-standard" as you can
get in the world of UseNet readers. He might also have noticed that
programs like Agent and Free Agent are NOT Unix tools, but Windows
programs which could solve his problem rather easily and
inexpensively. They're not particularly "complicated" either. Well,
maybe for solder-sniffers.

I've been using it. MSIE doesn't need to be running. As far as I know they're independent of each other. But maybe you're aware of some underlying programming relationship?

I don't discount anything where these things are concerned, but doesn't appear that you're correct on this one.

Mint condition Drake R8A with Vhf converter board. Radio is about one year old. Comes with original manuals, original box, Rs-232 interface, Vhf converter (Drake), Scan-cat gold for windows. This radio sells for $1056.00 with out the Vhf converter which costs another $220.00. On top that you get scan-cat gold for windows with the radio. The price is $900.00 FIRM! If interested please email me here or call. Or, if in the Delaware Valley area, stop in and try the radio out! If you like, I will sell it to you with out the VHF board for $790.00.... You just can't beat the price. I guarantee there is nothing wrong with this radio or I will give you your money back....

Don't Wait too long... This is a top rated Radio in all of the SWL and Ham radio review books and Magazines......

YOu are essentially correct, but I believe we can do more from the inside
than from the outside. THe code issue is one place where I disagree with
the arrl, but there is so much more good done when it comes to lobbying
congress and the fcc, education, public service, the list goes on an on,
that we can't afford not to join.

>I have been an ARRL member. I might join again some day, if . . .
>--

Join again, vote, participate! I see notices in qst all the time which say
that no nominations for sm in a section were received, or that the
incumbent was reelected due to a basic lack of interest.
Tech and above can be sm, as well as a lot of other positions. Join up,
and get active, folks! It's the only way to get the changes we need for
ham radio to remain viable in the 21st century.

>Tech Class ham?

You can reach your Division Director in a lot of ways. Their email addresses, postal addresses and, in most cases, a home telephone number, are published in QST. If you want something in person, or prefer not to have to make a long-distance telephone call, they attend club meetings and hamfests.

I have not noted that the Directors have decided that they are pro-code testing. They, like many of us (I am speaking as Joe Ham, not as a Legue employee), are looking for a solution to the Great CW Debate that will end the divisiveness and let us all get back to ham radio. Their recent publishing in QST of the ideas offered by a Board committee, with the banner "tell us what you think" does not indicate to me that they have made up their minds on what to do. In hanging around Directors over the years, I have overheard a number of conversations about the best ways to bring more new hams into the hobby and how to best address the concerns of the VHF-only operators, etc.

>Since more than 500,000 hams in the USA do NOT belong to ARRL I think
>there is room for a second national organization to represent them
>(and hopefully also) the other hams too.

This is making a lot of assumptions. First, you are assuming that all 500,000 are active hams in any sense of the word. How many are no longer alive? How many got licensed, but have lost interest and have no contact with the amateur community or operating? How many are just not joiners, and would not join any organization? (Not all the hams belong to a local radio club, for example.) How many hams get lazy and let their membership lapse for a few months at a time now and again? How many are the licensed family of hams and have just not sent in the $5 for family membership because they already get to read QST? I do not have firm numbers for any of these questions, but I suspect that the total number of all of these is greater than the number of people who have chosen not to be ARRL members over some specific policy issue.

I do not think that not belonging to an organization necessarily implies disgreement with their policies. I am not a member of the Salvation

Army, but I agree with much of what they do.

I will add that on three separate occasions, I have done a few random samples of those who post to rec.radio.amateur, to see what percentage are ARRL members. I got numbers of 80%, 87% and 50%. This is not scientific; the wide variation between the numbers shows that a much larger sample would be needed. But, to me, it does indicate that the percentage of active hams who are ARRL members is greater than a raw count of numbers would indicate.

I will add that, as a show of good faith, I would like to become a charter member of your organization, although I must admit that a good part of that desire is so that I can effect changes to what you are proposing. Let me know what information you need from me, and how my expertise can help in the rather complex structure you have proposed. I do like to be active in the affairs of organizations to which I belong.

I will also state that I believe that it is much easier and much more effective to change an existing organization than to start one from scratch. Lobbying, participation in the affairs of various industry and international commmittees, etc., all cost a lot of money and I just don't think this new organization can be effective in those areas.

I know that's what you think. Cecil thinks we should all be able to slam
dunk a basketball, and I think we should all be able to pull off a Stanley
Clarke bass solo. We are discussing a service for the general populus.
Some of those within our group will have these talents, but it is not
imperative that all in the group have identical talents.

>And it is pretty important in terms of determining
>if you are at risk of excess RF exposure.

The relevant data will be presented in tabular form so that we can campare
our systems to similar systems. This will be close enough, and adequate
for a rough evaluation. If no similar systems are shown, then we should
err on the conservative side, and use conservative amounts of power.

>It is also important to the understanding
>of the operating curves of active devices so that one won't exceed one or more
>safety limits in operating the unit.

One does not need to work integrals and differentials to read and utilize
the data from a device data book.

>It is even needed to understand the inrush
>characteristics of a power supply filter capacitor.

If the fuse blows, check for shorts. Inrush, for a conventional linear
power supply can be (and usually is) appproximated by a constant.
Knowlege of calculus is NOT necessary to understand that the phenomenon
exists, and to know how to deal with it.

>I'm not asking that the applicant

Goes without saying.

>This is pretty basic
>stuff, introduced early in high school math classes.

I recall my calculus classes in college (not in high school). I remember
something about the 100 integration skills we had to master the first

semester. It never struck me as "basic stuff" Gary. Glad you think it is though.

Hi, Dave.

I've never tried it, but I've heard of a few folks who have taped code
from the PC and then listened to the tapes on their portable tape
players.

"Canadian Tire" and "Walmart" locally sell a little solar panel array
that plugs into the cigrarette lighter; these put out a maximum of 100
mA at 14 volts, and are supposed to help make up for the standing losses
such as security systems, etc. Doesn't help overnight, of course, but
at least if you park outside over the weekends it will avoid having to
boost the car Monday morning.

I've seen small lights in the glove box or trunk that would stay on and
kill a battery in hours; the other thing I've seen is brake lights that
stick on. Might do to have a walk-round of the vehicle when you leave
to make sure nothing is left on.

Of course what I need is a solar panel that would charge the battery
while I've left the park lights on all day....I suspect this panel would

cause a lot more wind drag, though.

I have a Larsen mag-mount that blew off my roof twice the other day. I took it off the top centre of the roof and put it on the trunk lid where it would be less exposed to the wind; of course this also makes it a less good antenna. The mag mount is quite old, I've had it for about 4 years. Do they deteriorate with time ? I'm afraid it's not had a gentle life; two months ago the mag-mount came off rather abruptly when 2 inches of packed snow slid off the roof.

I think this logic is flawed. I don't have to learn the entire Code of Federal Regulations to figure my taxes properly, I don't have to be taught the entire works of Vector Calculus to learn that the first derivative is velocity and apply that properly, does knowledge of High School Chemistry connotate full knowlege of organic exothermic reactions? I hope not! To say that 6th graders have to be taught every nuance of the Log and Exp function to learn something useful about the subject is a bit silly, don't you think? As far as I am concerned, if they are graphing lines on Log paper, they are being taught 'something' about the nature of Logrithms. No?

> they don't know any of the above, then they aren't being taught logs.

Not entirely true. Teaching is a process. When you begin learning something you don't instantly know all the parameters of it. Can I expect any Ham radio operator to help me with a Greens Function or closed form Maxwells Equations solutions of field distribution in an overmoded waveguide? Probably there are some that have learned to that level and some that aren't interested. So then by your logic if they don't know the answer, they aren't learning anything about Radio Frequency fundamentals.

By the way, at work I am trying to model the loop dynamics of a Cartesian Feedback transmitter linerizer used with a class AB power

amplifier, care to make some suggestions? It's just algebra!

Hey thats right. might be a good argument we can use. All other ham
exams are I believe require no more than (about) 70% correct to pass.
But now the ARRL wants to require a 100% correct score on the cw exam.
Totally unjust. As of now the cw exam is a 70% correct to pass exam.
That is a large jump from 70% to 100% to pass.

If you are a new ham and agree with the ARRL's positions then by all
means join them. If you agree with mine then join me (free this year).
The ARRL wants to turn back the clock on code testing. Most ham exams
now require about 70% right to pass. The ARRL now wants the code exam
to be a perfect 100% to pass.

Heh. If, tomorrow, the FCC accepted checks for $100, and in return
supplied a Tech+ level ham license to anyone who applied, I doubt the
average IQ of hams would drop one point. In fact, it might even rise
a point or two.

All this code/no code and high-tech testing discussion is pretty much
irrelevant to the Real World problems of ham radio, as I see it.
Times have changed, and the service/hobby has not changed with it.
Times will change even faster in the future. Instead of thinking
about that, we sit here exchanging insults and quibbling about
insignificant details.

It may well be time to sit down and rethink the whole basis and reason
for our existence, rather than trying to force the old square peg into
the new round hole.

>We need to address our demographic problem. But we can do that with
>growth rates near our present Tech growth rates, if we can attract the right

Assuming you can rely on the stats as being accurate. I don't think
we have any realistic idea of how many *active* hams we really have,
and the 10 year license makes it impossible to have an accurate count
of how many hams have died or stopped operating completely.

>Our demographic problem is that the only class showing healthy growth
>and improving demographics is the Tech class. But Techs aren't considered
>"real hams" by large numbers of amateurs, even some of the Techs themselves
>don't consider themselves "real hams".Yet they aren't upgrading, and their tested

This assessment seems valid.

>skill levels are inadequate for the privileges they already hold. We have what is
>quickly becoming two separate amateur radio services. One is relatively young,
>vital, and growing, albeit somewhat clueless, the other is much older, stagnant,
>and declining in relative numbers as well as being mostly outdated in their skills.

I think that class separations have always been a problem in ham
radio. It's certainly not a new phenomenon. "No kids, no lids, no
"K"s no "WA"s..." was the chant of one famous old fart of 30 or more
years ago. Never heard the guy myself, but his "fame" lives on.

>> It's a hobby, not a job, why make it so difficult??

>Not sure how to take what that means in relation to
>your other comments.

What I was trying to say, is that some of the theory used for the advanced and extra class licenses seem to be on the level of Doctorate Degreed Engineers.
I studied and learned it, passed all theory, now just working on the 20WPM code. I know I can do it, but haven't dedicated the time for the code study yet.
I feel what helped me so much was the Electronics Technology course I took, and that someone without electronics background has an extremely hard job getting the upper level licenses. Maybe that is the reason the tests are so difficult, but why?? Like I said, it's a hobby, not a full time job.

I was also showing that the same reasons for not studying code (I'm not going to use, why should I learn it) also is true for the upper class theory.

>>Why do I have the know what combination of battery and one resistor would
>>it take to do the same job as a different battery and two resistors? Or
>>why do I have to know the phase angle and value of the voltage in an RLC
>>parallel circuit so I can use an extra 25Khz on 80 meter band??

>You need to know that because it is part and parcel to the goals
>of the service as stated in Part 97. That's in contrast to CW
>knowledge which is in no way addressed as a goal of the service.

OK then, you need to know code because thats the rule as stated in the amateur testing sequence of higher class licenses. Do you sort of get the drift here or do I have to keep snowing??
Was not saying it is right to drop theory, or to drop code, just stating that the procedure is in place, so I follow it, although in my opinion, it seems it goes to extremes in both code and theory.

Good Luck with your working toward the nocode option. If it happens, then I will again abide by the rules, although I really enjoy using CW, and will continue, because for ME, it's fun. It obviously isn't for you...

>I've just started studying for my General ticket and I need to
>know "what is the best way to learn the morse code?

Although I can't say it was the 'best way' i went to radio shack and bought a copy of their Gordon West code test tapes, that take you right from step 1, no code at all, to 5 WPM, and if you want to continue, will build speed up to 13 WPM.

The only problem with code tapes, is that if you use it a lot you will find yourself knowing what the code sequences are. I used the code tapes in combination with a radio to listen (If you don't want to buy an HF rig yet, try one of the receivers G and G communications sell for $89 - They are Radio Shack models (God I seem to be pushing RS tonight, not meaning too) and are communication receivers 150KHz to 30 MHz.

Good Luck with your code - N1WSA

Source record: 196703

>Help! I need an explaination AND a practical example of "velocity
>factor". I know the following about it...relates to coax, what else?
>Thanks!

Radio waves travel in free space at 300 million meters per second. In coax (and other feed lines) the radio waves move slower. Velocity factor is the velocity of the radio wave on the transmission line divided by the velocity in free space (300 million). Most coax cable has a velocity factor of .66, with better grades of coax having a higher factor.
Now - The physical length of a coax cable is SHORTER than its electrical length due to the radio wave moving slower. The formula to get a physical length of coax, if you know the electrical length you want is:

Assume you want a hunk of coax that is 1/2 wavelength long for the frequency you are using. You multiply 984 time the wavelength you want (.5 in this case) times the velocity factor of the coax you are using. Divide this total by the frequency in MHz you want to tranmit at.

hope that helped

> >
> Did you happen to see the movie "Independence day"? Hams were
> featured for helping to save the world against the aliens.

Actually, the "news reporter" mentioned that hams were monitoring CW
transmissions concerning the upcoming battle scene. There was absolutely
no mention that hams were instrumental in helping save the world. Unless
of course, you were privy to a different version if the movie than was
played in the theatres.

>
> I think the foreign newspeople would love a story about the United
> States government trying to keep out US hams.
>

I think that foreign governments ,CNN or the news media will even give
the conference the time of day.

In the context of things, this is on the same level as sand storms in the
Sahara.

The only thing that would excite the media about the US and US hams is if
Boars Head was coming out with a new honey glazed for export.

You sure know how to belittle people, but so far you have not said anything about service and hobby, Yes being a ham does include having fun, being a hobby, etc. But part 97 does say its a service. I suppose you will belittle me some more for saying what is written. It is a mandate to us who have been given the privelage of using this precious spectrum. Of course what do i know, I just write poorly, do not know anything about rf propagation, human nature, and am stupid, all because you said so. Thanks for tearing me down. Now if you want to say something about the reasons why you think of the radio amateur service as being only a hobby then we are all ears.

About using CB antennas on a 2-M rig; there is a 2-M strip-line
filter in the ARRL Handbook that I made one of, and it matches
2-M to CB antennas like crazy!

A foot of 1/2" copper tube and a var cap and a couple 50-ohm
connectors and a 2" X 2" X 14" box, and a bit of patience is all it
took.

Try it, you'll like it.

In a previous article, afn01079@afn.org (John Hughes) says:

>Adam, with respect: you brought your personal experience into it. I
>certainly don't have any criticism, but if someone responds why be upset
>with them? >

The reply assumed things that where simply not the case (something
to the effect that I was on usenet at the time I was studying, and that the
time should / could have been devoted to code study. The fact was that I
was NOT on the net the whole time I was studying). One should assume little
in life, it just makes an ASS out of U and ME. It was the assumtions in the
response, not the response that got me.

> You say you could learn the code if you "had to".

"Had to" was not the best formulation. I could learn it if I needed
to for a job or if someone's life was in danger, or some other urgent situation.

> At this
>point in time you do have to in order to have access to the hf bands. If
>you choose to devote your time to other pursuits that's fine. Those are
>obvious observations. I would only note that if you had chosen to devote
>the time, by your own statement, you'd have it over and done with,

I have a job, making darn little $, dealing with people. My job
provides more than enough agrivation- I choose a hobby for fun, not
frustraion. I wasted 2 1/2 months the last time I tried to learn it (over the
years I have wasted a lot of months). I swore I heard that darn bliping and
beeping in my sleep ! It just ain't worth it.

> with at
>least the theoritical possibility of obtaining your father's call (sorry,
>haven't looked it up for availability) through the vanity call program.
>That would be wonderful.

I would prefer my own call. My father (as I see it) is dead and
gone, there is nothing I can do about this. I figure the call ought to go
into the grave with him, just as his wedding ring and apron (he was also a
32nd degree Mason). I can understand if someone else takes a loved one's
call, but I didn't plan to. Let me repeat, I can understand and respect it
if someone else does.

> In fact even a technician license (without the
>committment of time to learn cw) might allow for that.

I considered that, but I am not interested in VHF, HF, MF and LF
are what I am looking to use.

>

Removal of the code requirement is the only way to go. The hobby has
been nearly killed by this requirement. But the dudes with the FCC's
ear are not even reading this thread. They were the only dudes with
the ties and jackets at the HamVention in Dayton last month, the ARRL
mafia. Do they have an internet connection yet? Do they really care
about the future of the hobby, or just protecting it from dangerous
computer types? Or horror of horror's CB-ers? The hobby continues to
gray, interest continues to be drawn away by the internet and computer
to computer communications. The code requirement should simply be
dropped,, no band plan for CW no requirement, any geeser that wants to
use it (or computer hacker with his computer as the key) can talk to
anyother user if they want to. .. the clock is ticking on the frequency
allocations .. do it now!

Perhaps you can provide even ONE compelling reason why every
ham that desires an HF amateur license should, in today's
communications environment, be forced to learn any Morse Code?
Sorry, claiming it's the treaty requirment can't be used.

I agree with Michael on these points (sound of MD fainting from
shock :-). I believe that whatever one does to foster their
communications skills will, in the end, be beneficial for
emergency communications. That can include DX hunting,
contesting or just plain daily or frequent communications...as
long as proper procedures are used.

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-Mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are _*essential*_ to its ongoing success, so please drop by and say hello!

QEX Editor

Digital Signal Processing (DSP)

Collecting information for the next annual ARRL Computer Networking Conference:

http://www.tapr.org/tapr/html/dccconf.html

For information about the ARRL info server, send E-mail to info@arrl.org with the word "HELP" in the message body.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Packet and Digital Networking

I am an NTS operator running an unattended digital (Express, Winlink
equivalent) digital system. I operate a hub station for Eastern Canada
Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.). My current
concentration is on writing UNIX based tools (e.g. software for
logging, antenna design, propagation analysis) that can be shared
throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a
variety of ham-radio related mailing lists as well as a comprehensive
World-Wide Web site and FTP archive, and was one of the first Internet
servers dedicated to ham radio. The system is also a hub site for the
ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an
e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

]

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on

packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emeregency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Cordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

>the motherboard? How long did it take you to engineer the microcode
>for the CPU? What type of memory architecture did you engineer into
>your system? CC/NUMA?

Mike:

I think he meant on a PC he *assembled.* The components would have
had to be 'built' by someone else!

* HF
* Homebrewing
* Chemical Safety

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie,
FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the
Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and
John Seney for FAQ maintenance opportunities and the
rec.radio.amateur.* Working Group mailing list). To paraphrase Zack
Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ
management and posting package from Ian Kluft and would be happy to
guide new FAQ authors in its use. The latest version, 3.2pl2, is
available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To
subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly.
To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using
KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.

I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

(Spinal Tap)
- ---

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio
examinations on-line. The written examinations for all five classes,
novice through extra, can be generated complete with figures, filled
in on-line, and then graded. The results are presented
question-by-question, and also graphically by subelement, so that
users can identify areas which require further study.

More advanced options include saving the results of each examination a
user takes on-line. These results can be used to monitor progress and
also as a basis for generating exams tailored to a user's needs,
ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Frank E. van Vliet PA3FAQ

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

Raleigh, NC USA | "Powering Your Network with Intelligent Solutions"
- --

I am especially interested in VHF/UHF and microwave amateur bands as well as Amateur television. I am treasurer and a founding member of the newly-formed Triangle Amateur Television Association in Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature
phase shift keyed) modem for the amateur satellite channel. This modem
is implemented totally in software running on a PC with an ordinary
(non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
transceiver bandwidth.

I've made good progress and have put some info up on my web page about
it, including an audio file to show what it sounds like in noise when
the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the
code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting
relatively wide-band digital modes on band occupancy and throughput
(i.e., What gets optimized? Are there tradeoffs in quality vs.
quantity?) in the context of the spread spectrum rules debate, but I
think it needs to be a much wider discussion. See my reply comments to
the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level
Elmers in this directory, including Jeffrey Angus, Gary Coffman, and
now Phil Karn. Phil has graciously agreed to appear in this directory
for the purpose of elmering and technical exchange for the advanced

topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* How do I become an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and _"Amateur Radio Elmers Resource Directory [*-Z]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

!
! I am a practicing electronics engineer (for over 35 years) with
! expertise in solving problems in the design of linear circuits, audio
! signal processors, low frequency (DC to 10 MHz), low noise, field
! effect devices, power supplies, batteries, and similar analog
! situations. I'd be glad to assist others in the solution of their
! electronic problems in these and tangential areas. I started in ham
! radio as a kid in the 50's, vacuum tubes, motor generators, and most
! everything related to WWII surplus equipment. Was a design engineer at
! Texas Instruments for several years in the heyday of discrete devices

! and linear integrated circuits, mostly for military and surveillance
! use. My present concentration is toward digital telephonic
! communications. Have now gotten pretty familiar with use of the
! Internet. I guess it goes without emphasis that my capability goes
! beyond the areas I listed as being most competent, but I could be a
! resource you may apply as you feel my experiences would be helpful.

+ I am involved in training for new and upgrading Hams, paying back for
+ Elmering received over the years as I came into Ham Radio. I am a VE
+ for VEC's active in local area. I am most interested in assisting
+ young, old, and handicapped persons to discover Ham Radio. However, I
+ want to help anyone that is committed to getting a Ham license or
+ upgrading. I am most active on Ham satellites, mobile and fixed HF,
+ Digital modes and construction. I am an avid electronics constructor,
+ repairer and experimenter. I am trying to sample all modes, bands, and
+ interest areas. I am also skilled in Public Relations, demonstrations,
+ and "de-mystifying."

+
+ Educational Advisor to the American Radio Relay League
+
+ I specialize in developing growth in volunteer organizations and have
+ published and made public presentations on this subject.
+
+ I have written and published training/educational curriculums for
+ Novice, and Tech Plus amateur radio licenses. Of interest is the fact
+ that amateurs licensed through my courses are very likely to upgrade
+ as evidenced by the high number of hams in the Lawton, Oklahoma area
+ that hold Extra Class licenses.
+
+ More recently I have been involved in securing building permits in
+ Florida to put up amateur radio towers in this highly restrictive
+ State.

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting
tapes (especially Callsign tapes) from the Department of Commerce
National Technical Information Service (NTIS) or wanting other info on
callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise,
really!

My job is currently System Administrator for a large UNIX site so I
know a little bit about day-to-day UNIX operations and UNIX
installation :-) I also have much experience with constructing E-mail
paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software
interfacing and machine control.

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director

at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

Hey, sign me up!

OK, now that I'm signed up as a voting member, I vote that
USARA supports 100% perfect score on all tests, not just
Morse. We want excellence.

Go down to the computer room and tell them to empty the bit
bucket, and FAST, before this baby overflows.

That part was so authentic too! Like the part where all the
drunks and trailer-park trash knew how to pilot F-14's and
alien fighter ships and defeat the invaders.

Will this be the official movie of USARA?

4678. Virtual amateur radio staion (CW) emulators (ala "Dr. DX")

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-02 00:00:00 UTC
From: rmg60@aol.com
Message-ID: <19970602161501.MAA02156@ladder02.news.aol.com>
Source record: 196732

I would like to hear from anyone who has information about a virtual amateur radio station for the IBM PC. I know there was once a product called "Dr. DX" for the Commadore C 64. It allowed the user to emulate a CW station from anywhere in the world.
Thanks

Rob G. rmg60@aol.com

I found nothing in any ham tests that assumed more than high-school or AA level electronics and math skills. Now it is true, that some of the subject matter is no longer taught as part of a basic electronics course. That is because young people are more likely to find logic design or computer programming to be useful these days. But because it is no longer taught in a comprehensive manner does not make it "difficult".

It does mean that you have to learn it on your own or find someone to teach it. I've mentioned before that an engineering-oriented radio course that covers through the Extra level theory (sans antenna stuff, FCC rules, and ham specific techniques) but with Calculus, fourier analysis, and other engineering level math, is taught in one college at the sophomore level.

>I feel what helped me so much was the Electronics Technology course I
>took, and that someone without electronics background has an extremely
>hard job getting the upper level licenses.

I've taught a couple of code classes and general upgrade classes to non-engineers since getting started in ham radio. My experience is that code is the stumbling block. Most people can pick up on the radio theory if someone who understands it is capable of making a coherent explanation. The spread of progress on code students was much larger. Some of this was physical - one guy was partly deaf, another was tone deaf and could barely hear the difference between di and dah. Some of this was sub-optimal attitude: not enough time to practice or its too hard; but at the same time they came every week and they thought the theory was too hard also.

I love (sometimes) to read these threads of cw vs. no-code. The no-code advocates always state that you don;t need to learn CW to enjoy the hobby, or to use the radio. However, you didn't seem to mind learning how te make a dipole on a given frequency, or just what impeadance is, or OHM's law. When was the last time anyone needed OHM's law to buy a 2m mobile, a mag mount, and to start using a repeater?

It isn't a matter of needing CW to enjoy the hobby. Consider it a right of passage. I was never much of a CW user. I was disappointed with the FCC's elimination of the CW requirement for VHF. I believe it's the first step to eliminating tests and licensing all together, but that could be said about some decision made 30 years ago. However, I have grown to accept the fact that it exists. I don't mean to denegrate any no-code tech. You still had to pass a test.

Now I am starting to explore more aspects of amateur radio. I am currently a General (have been for many years) but I've had to work at gettingmy coe speed ba un have started making a few contacts. My goal is to make it to 20 WPM and pass my Extra. NO MORE TESTS! I can't say that CW will be a large part of my operating habits, however, I am willing to learn it to get the extra priviledges. Just as I am willing to learn how to calculate the polar coordinates of the impedance of a RL circuit at some frequency.

To all those CW die-hards: quit whining, no-code's are here. Accept them or be bitter for the rest of your life, and who REALLY wants to be bitter.

To all those CW haters: quit whining, CW is here to stay (just ask the ITU how ready they are to eliminate it!). If you want enhanced priviledges, learn the code or keep quiet and be happy with what you have. But once you pass that 13 WPM or 20 WPM test (5 WPM, IMHO, is just too easy), you can proudly proclaim "I DID IT" and where that badge of courage with honor!

How about this change:

<Remove the article requiring Morse proficiency for licensees
below 30MHz>

You keep proposing more law to address an issue caused by too much
law already. Slow down a little, study this a little, and understand
how the involved organizations operate. You've already declared you
have the solution before you even really understand the problem
and the necessary context.

Actually, I recall that Morse code was featured, not hams.

ID4 was one of the most ridiculously contrived movies I've ever
seen, by the way, and I wouldn't attempt to relate anything in it
to real life.

Actually, the movie gave no indication of who the people were. It just showed some guys standing up, reaching over a desk to a counter on which some Tel Rad straight keys with about a half inch of travel were sliding around. I got the impression that they were supposed to be military operators. They were presumably in communication with other military organizations at various points around the world. The telegraph keys conveyed the idea that the operators were using short wave radio rather than satellites.

This is not exactly on topic as far as the news group goes, but I thought maybe some of you folks would have some info.

I am looking into purchasing a 900 MHz cordless phone. I can't get any specs from the various owners manuals I've looked at. What is the maximum allowed power that these things can transmit?

Which models are "true" spread spectrum?

Experiences?

Being the radio nerd I am interested in a bit more than the "plug in here" "Turn on here" discussions in typical owners manuals

Thanks,

Jeff, KD6DHB

>>minute straight instead of the current system).

>Sigh. Why is requiring a minute of solid copy a step backward? Because
>it makes people demonstrate that they can actually copy CW, rather than
>just copy 75% and guess correctly on a multiple choice examination?

I don't recall ever having to pass any exam with a 100% score in
any area or subject I've ever had to take a test on.

Additionally, it is a step backwards to require perfect copy
because the knowledge of CW has no current relavence to being
a ham that would or should require such exactness.

>Perhaps you'd rather use an NEA "outcome-based education" approach to
>CW examinations, where nobody fails, as long as "they feel good about
>themselves and the answers they give" on the tests? Or, maybe you want
>to make the CW examinations more like:

This is bull and everyone knows it. No one is suggesting
any of that. All we want is a test that contains relavent
requirements and a passing score which is similar to any
and all other testing.

But wait! Learning code isn't a stupid, sensless act. Just think of all the nifty things one with code knowlege can accomplish.

-You can tell off that guy in front of you on the freeway who's driving 40 MPH by honking your horn appropriately.
-You can train your dog to respond to characters that you whistle and amaze your neighbors.
-You can decode those repeater IDs and know who to ask for autopatch privleges.
-You can decipher the hidden meanings in music - i.e. the V in Beethoven's 5th Symphony, representing artistic Victory over his impending deafness.

;)

I enjoy using code. As a matter of fact, it's the only mode I use on HF. And I think if people would give it a chance - actually take the time to learn it and use it, they would find it to be fun. It is for me. But I do support the idea of a Lo-Code General. If someone passes all of the theory tests and the 5 WPM code test, they should have General class operating privs.

My 2 cents worth...

> am I trying to cram something down your throat? My FIST # is 2365.

Dave ... you, personally, may not believe in cramming Morse down
our throats, but FISTS *does* ... read their manifesto, which was posted
recently ... it's quite clear that their goal is to maintian mandatory Morse
testing FOREVER and then some ... and it would appear that they would
relish the idea of making Morse more "important" and making Morse tests
more rigorous ...

> I joined FISTS because as an _organization_ they strive to save CW
> thru it's utilization and education. I like code, but don't think it
> should be a requirement. I do want to see that it gets continued use,
> this is the reason I joined.

If Morse is valued by some, it will survive ... if it can't stand on its
own two feet without government-enforced artificial life-support, then
it DESERVES to die in peace ... personally, I think nature's course
would result in a modest minority of folks happily beeping away 50
years from now ... ASSUMING that mandatory Morse hazing is no
continued (otherwise, ham radio will be quite dead and buried long
before 50 years passes ...)

> If some, or even most, of the membership
> thinks cramming code down the throats of others is the methodology to
> use, that is their right, but don't paint all of FISTS with such a
> wide brush.

So the KKK shouldn't be painted with a racist brush, "just because some,
or even most, of the membership thinks ______" ??? Give me a break.
To paraphrase from "Forest Gump" ... "Bigoted is as bigoted does"

> There are no-code advocates who are in reality
> anti-code (do away with) advocates.

I have been anit-code-test for over 20 years and I have YET to meet a
SINGLE individual who advocates a ban on the use of Morse ... not
one ... everyone who I know would NEVER support such an action,
even though they, personally, never use, nor never would use, Morse.

> The ARRL is going to do what is necessary to sell more
> subscriptions, books and education material. Their not
> interested in swaying anyones views one way or another unless
> the trend is toward more profit.

At least we agee on *that* ...

> While less than 25% of the
> US ham population, they are the ones who are being the most
> vocal.

That's why it pisses them off so much when we anti-code-test
folks speak out ... they know that if we just speak up, they'll be
unable to perpetuate the myth that they are the "majority" ...

> Please, before attacking a group based on it's membership,
> check it's philosphy more carefully. FISTS was not intended to be a
> lobbying group, just a SIG of sorts.

Their manifesto belies that claim ... maybe you're not aware of
what they're *really* up to ...

Hi, Harry.

Please download my program, International Morse Code Processor, version
3.13. You can get it from

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

This program has an in-delpth help facility which will guide you in
learning the code.

CrACKeD <cracked@primenet.com> said:

> If one needs to know CW to operate on HF,

One does, at least the majority of HF.......

>and if you think one must use HF frequencies to enjoy ham radio,

I don't think that, and I never wrote that either......

>then you *were* saying on needs to use morse code to enjoy ham radio.

No, you thought that I was IMPLYING that when I said "Go learn Morse
code and enjoy ham radio", but I was implying no such thing.

> Before, you said "go learn HF and enjoy ham radio," not "go learn
> HF to enjoy the bands and modes doing so will give you access to."
> Sounds like your clarification is more of a modification, really.

Sounds like my clarification was not clear enuff..... Halt, Reset, Load....
Let's try again, one more time.

No, I never said "Go learn HF and enjoy ham radio." I said "Go learn Morse
code and enjoy ham radio", and when I said it, it was not directed as a blanket
statement to the general public. It was directed at one person, Leslie, who had
previously stated he had passed ALL the written tests up to and including the
Extra class test. It was a prescription for Leslie to solve his immediate
problem and not intended as over the counter medicine for anyone who isn't
feeling good about Morse code. No, I did not say anyone has to use HF to enjoy
ham radio. That's silly. I have been enjoying ham radio all day, and I have
not used HF at all. I talked to two other hams on a VHF simplex frequency.
I drove to the radio club meeting in my car, and talked to a few other people on
a VHF repeater. At the club meeting, I set up a portable packet station and we
banged around on the Guam packet network using VHF and UHF. When I
came home, I talked to another ham on the telephone. And now I am enjoying
ham radio using the internet. Where you got the idea that I think you have to
use HF to enjoy ham radio is beyond me. Go check Deja Vu, and if you find
a post with my call on it that says that, somebody is bootlegging my call on
here just like they do on 160 meters.

But maybe you have uncovered something that may end a lot of needless arguing ,
CrACkeD. Unless I missed something somewhere, I thought that was
what all this heated debate is about - HF. If you don't need to use HF to
enjoy ham radio, then you don't need to learn Morse code to enjoy ham radio,
you can enjoy it on six meters, or two meters, or seventy centimeters or above,
and then we don't need to change anything. The program for anyone who

wants to enjoy ham radio without using HF, and without learning Morse code, has been in place for quite some time now.

>This argument is getting stupid, Jim.

Well, then we are posting it in the proper newsgroups, and we are in good company. This isn't, by the way, an argument. This is a discussion, or maybe better would be described as a clarification of a previous discussion, but I don't see how we can call it an argument. We aren't even calling each other names........

Gee did your radio come with a fixed frequency?? Don't listen to it.
Go to a party, biz meeting any social gathering -- and hear the same
thing.
Your problem is people -- not Ham radio -- QSL??

I just updated my page 50.400AM page.

Sorry it took 2 weeks for me to add the calls from 5/23/97
What a nice opening it was!
Got in on it late but worked many stations up north.

I'll be on 50.400 today around 15:30(pdt)(22:30z) today for a few hours.
I'll call CQ every half hr. starting at 15:30 pdt.
Hope to catch some of you out there.

Go and check out the grids I worked on AM.
http://www.geocities.com/Hollywood/5860/50am.html

I'll keep adding to the list every week.

I have the ACARS decoder and software , and want the FAX III software to go
with it.
But AEA is out of bussiness.
If anyone has the FAX III software please E-mail me the program , or drop
me a line at:
ketelsen.steven@mcleodusa.net

Thank You,
Steve

Will trade a copy of ACARS.
They use the same decoder(demodulator).

Your battery is toast. Get a new one. With less than a half amp of
draw, the battery should last for hundreds of hours.

Hello everybody,

the upcoming "Middle-European" ham radio 1997 isn't far away ...
So here are some informations:

Date of the fair: 27. ... 29.June 1997

Location: Friedrichshafen, Lake Bodensee or Lake Konstanz
located in south-west Germany, close to the Swiss-,
Austrian- and French border

The Bavarian Contest Club invites all DXer and Contester to visit the
BCC fair-stand and the Meetings on Friday- and Saturday evening.

More information are available via the BCC Web Page !!!!!

http://www.uni-erlangen.de/~unrz45/BCC
or http://www.rrze.uni-erlangen.de/~unrz45/BCC

See You there .....

I COMPLETELY disagree. First of all, if you can get 1 minute of solid copy, you can pass the CW test. My Dad had not listened to CW for 20 years, but was able to pass his 5 WPM code test a month ago. How did he do it? Not by answering the "fill-in-the-blank" questions, but by looking at what he was able to copy, and filling in the blanks of his copy. You don't need 100% solid copy to figure out what was sent.

> >It isn't a matter of needing CW to enjoy the hobby. Consider it a right of

> for good cause and sound compelling reason(s) why.

You obviously haven't paid much attention to my post. I NEVER implied that the FCC would require examinations as a "right of passage." I said consider it as such.

I am a former member of our armed services. And not ONCE after basic training was I required to march in formation, or have perfect hospital corners on my bed, or have all of my uniforms buttoned and pressed, hanging evenly spaced inside my locker. Did you know that to become a jet

fighter pilot, you can't wear glasses? Now, once you are a pilot, as long as your vision is correctable to 20-20, you can stay a pilot? Boy, sounds like a "right of passage" or weeding out to me. And by the governemnt no less.

> > I was never much of a CW user. I was disappointed with the FCC's

> >to eliminating tests and licensing all together,
>
> Oh sure, and where have you seen that idea posted. Answer...it
> is only the pro-code test advocates that raise that scenario as
> a fear tactic.

That idea was posted, not here in a usenet group, but way back when, when CB stood for something more than the "Criminal Band" because you had to have a license and FCC issued call sign to use CB. The idea that lessening the requirements for any priviledge is new, is about as blind as you can get.

> > but that could be said

But you are, by encouraging the elimination of CW as a test requirment. CW was the FIRST digital code. When SSB and FM won't get through, guess what will. That's right, CW. I guess you'd prefer that the test be as follows:

1) What part of the radio do you talk into?
A) The microphone
B) The oven
C) Your ear
D) All of the above

2) What do you call that tall metal thingy you stick on the outside of your car?
A) The passport
B) The antenna
C) The camera
D) The internet

And as long as you get your name right, and spelling doesn't count, you pass. Is that what you mean?

> >Now I am starting to explore more aspects of amateur radio. I am currently

No kidding. Gee, I would have never guessed. I guess I shouldn't have just ignored that part of my Novice test that was on the different license classes.

> > NO MORE TESTS! I can't say that CW will be a
> >large part of my operating habits, however, I am willing to learn it to

As noted above, you are wrong. I can only miss 12 questions on the advanced class test. Should I just ignore the math part, how about the part about intermodulation distortion, or maybe frequency priviledges. Who needs to know that. Isn't that what my band-plan chart is for?

> >To all those CW die-hards: quit whining, no-code's are here. Accept them

I would be willing to bet, that the ITU (International Telecomunications Union) will NOT eliminate a CW requirement for the HF bands anytime in the century, or maybe even the first half of the next.

> > If you want enhanced priviledges,

Then get out of the hobby and go and enjoy those things, and quit wasting your time arguing the subject. You're probably one of these ham's who memorized the test questions and answers, crammed the code in a month, passed the tests and doesn't know a damn thing about ham radio other than what frequency the local repeater is on. At least that is the impression your boasting.

> Bill Sohl K2UNK
> ARRL Local Gov't Liaison, Mt. Olive Township, NJ
> Visit the No-Code WEB site: http://www.nocode.org

My original post was just a simple comentary. I certainly thought it was even and as unbiased as I could get it without taking a middle-of-the-fence position. But your attacks on my credibility and my intelligence warranted my reply. If you are unable to participate in a civil discussion without such attacks, then pull the plug on your computer and go play with your 2m rig.

> Nobody in the amateur radio SERVICE wears the same uniform....

But of course they do!

Those who are Real Hams (tm) wear a
blue jumpsuit with a flag on the shoulder, lots of patches on
the upper torso area, and a cap with their 2x3 call embroidered
on the front. Laundering of this jumpsuit is apparently optional
in the Amateur Service.

Those who are Kilocycle Kops (tm) wear the above, and
in addition a genuine gold anodized badge available from
an ad in the back of 73 magazine for the astonishingly low
price of just $69.95 plus the boxtop from one 2M HT.

This appeared on the BA mail list. It might provide a hint as to why
many OT hams "look down" on today's know-nothings.
Jeff KH2PZ / 7

---------- Forwarded message ----------
To: boatanchors@sco.theporch.com
Subject: A 1940's Exam Question

Gang ..

I was reading through a newly acquired copy of the ARRL License Manual
published in 1940. The following study question is from the "Class A"
license section:

"Draw the schematic circuit diagram of a modern amateur radiotelephone
transmitter, complete with plate and filament power supplies and
antenna system, showing a crystal-controlled oscillator, a buffer
amplifier, a modulated amplifier, a modulator, a speech amplifier, and
a speech input circuit including microphone"

The ARRL's comment is "Every applicant should be capable of drawing a
complete schematic... of the type indicated ..." For the record, the
"sample" is a type 42 crystal oscillator driving an 807 buffer and a
pair of 809's. Audio section is a 6C5 speech amp, 6A5G's in
P-P driving a pair of 809 modulators. Plus low and high voltage
power supplies.

4715. Re: A 1940's Exam Question (fwd)

Here's another note from the BoatAnchors email list regarding the discussion of these "draw the schematic diagram of ..." exam questions. As I recall, when I sat for my General exam (1976, at the San Francisco FCC office) I had prepared myself so well that I was able to draw any circuit that might have been called for (even though by '76 the questions were of the multiple-choice type).
Jeff KH2PZ / 7 (1976: WA6QIJ)

---------- Forwarded message ----------
To: boatanchors@sco.theporch.com
Subject: Re: A 1940's Exam Question

That requirement to be able to draw schematics continued on into the '60's, at least on some licenses - and the written exams were NOT multiple choice. They had a blank for the answer, and you needed to fill the blank with the correct answer - probably one reason they took so long to process. I remember memorizing the different oscillator circuits... and when I was taking one of the commercial licenses (either Second or First Phone, I think - would have been about 1961) I remember a series of schematics THEY printed, with the requirement to check them, if they would work as they were, leave 'em alone; if they would NOT work, draw in the appropriate fixes. I recall one which was an FM circuit I was not familiar with - not knowing whether that one would work or not, I just crossed it off entirely and drew one I knew WOULD work. Don't know how they scored that one - but I did pass the exam..;)

C L O S E D C I R C U I T A D V I S O R Y

The following advisory is not for transmission over amateur radio. As spring and summer approach, we are again forced to ask our listeners for their financial support.

According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the end of June. And that does not take into account our fixed annual expense in presenting the annual Young Ham of the Year Award to some worthy young radio amateur. Our administrative costs in that area alone is in excess of $1,000.

So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1033 for release on Friday, May 30, 1997 to follow.

(*****

The following is a QST

Ham Radio helps after tornadoes ravage central Texas. Protection for ham radio volunteers against frivolous law suits comes a step closer and another threat to our bands. All this and more on Newsline report number 1033 coming your way right now.

(*****

TEXAS TORNADO

Ham radio operators are involved in providing emergency communications in the wake of tornadoes that have hit central Texas on Tuesday, May 27th.

Twice in eight years the town of Jarrell, TX has been struck by killer tornados. In 1989 only one person was killed in this central Texas town one hour north of Austin.

But on Tuesday, May 27th killer storms struck again. This time with a massive tornado that caused at least 30 deaths. As one state trooper reported, the town was pretty well flattened, dozens of homes demolished down to bare concrete slabs in some spots.

Ham radio emergency communications were soon activated. As Dan Poggemiller, KB5TWO Emergency Coordinator for Williamson County picks up the story.

"We got to the Williams County E.O.C. around 5:30 in the afternoon. That is when things were starting to get fast and furious. That is when the taxing of the 800 MHz system cratered more or less and it was down for approximately 2 hours. And as the 800 went down, of course the cell phone use went up, everybody has got one in their possession. And none of those worked.

We were the only communications they had. We already had some operators had made it up through the storm to the Jarrell site and we had operators onsite there and with us. And we had some operators through the Travis County group at the Austin E.O.C. and at the American Red Cross.

And we were basically the only communications that they had for approximately 2 hours." KB5TWO

Poggemiller then noted a historic link to the 1989 tornado to this tragedy.

"Well, we used the 145.13 repeater in Wallberg. Ironically, that repeater was installed because of the last Jarrell tornado. Because there was absolutely zero way to get any communications from that part of the county.

And there was a group of hams that put that together after the first Jarrell tornado. And it worked flawlessly." KB5TWO

John Sneed, Director of Emergency Services for Williamson County had nothing but high praise for amateur radio operators.

"The Hams were very instrumental in continuing to provide us the communications throughout actually the entire county during the tornado. They were able to help us as far as getting information from the tornado scene back to communications. As far as providing help with obtaining equipment, etc.

We did experience a temporary radio failure and had to go to a backup system, which obviously it was not as good as the primary system. And during that time they were instrumental in helping us continue to operate." Sneed

Hams from Waco to Austin, TX were involved as these killer storms tore a destructive path through the central heart of the Lone Star State. And Poggemiller expressed his cent aments for those radio amateurs helping in the Jarrell area.

"And it was just a great effort the Williams County group." KB5TWO

The storm that devastated Jarrell was one of several tornadoes to hit the area in a 24 hour period. Weather forecasters say that a stationary front was responsible for the severe weather in the area. Hams involved in severe weather spotting remain on alert as we go to air.

CONGRESS PASSES "VOLUNTEER SERVICES ACT"

The United States House of Representatives has taken a major step to afford federal liability protection to amateur radio groups and other volunteer organizations. The ARRL reports that House Resolution 911, the Volunteer Protection Act of 1997, was approved by a lopsided 390 to 33 vote.

HR 911 is similar to HR 1013 introduced earlier this year by Congresswoman Anna Eshoo and was approved by the House without debate. It is the companion to Senate Bill S 544, introduced by Senator Paul Coverdell of Georgia. S 544 was recently created by amendment by the Senate Judiciary Committee and it too passed by a wide margin. Together the two measures provide provided substantial liability protections under the Federal Tort Claims Act.

Indemnification would be provided for most volunteer groups operating within programs sanctioned by many nonprofit public and private organizations and government entities.

Amateurs active in the Volunteer Examination and Official Observer programs, Amateur Radio Emergency Service volunteers would fall into this category.

The two bills now go to the House-Senate Conference Committee to iron out minor differences. If signed into law by President Clinton, the Act will constitute a major piece of legislation to protect hams who want to volunteer their services but are afraid to do so for fear of being hit by a frivolous and expensive nuisance type law suits.

NEW THEFT DETERRENT SYSTEM WANTS TO USE HAM BANDS

The FCC has received a Petition for Rule Making from Checkpoint Systems, Inc. The company wants the Commission to permit electronic article surveillance operations in the 1.705 to 30 MHZ band. This, at a fairly high maximum radiated emission level.

Checkpoint Systems is the manufacturer of some fairly sophisticated electronic article surveillance systems that use frequencies in the 1.7 to 10 MHZ range. It is regulated as an unlicensed intentional radiator under Subpart C of Part 15.

Under Part 15 rules, such devices may operate without restrictions on bandwidth, duty cycle, modulation technique or application, but must comply with specified radiation and emission limits and protect licensed services from harmful interference. But Checkpoint says it needs the higher power levels to overcome what it calls the increasing levels of ambient RF noise in commercial establishments. The expanded frequency range, the company says, will allow for greater flexibility in deploying EAS systems and reduce the potential for false alarms.

Checkpoint already holds an experimental authorization to operate EAS equipment within the 7.4 to 9 MHZ and 8.2 to 10 MHZ bands at higher power levels. The company says it has received no complaints of interference. Its Petition for Rule Making was received by the FCC on April 28.

(Via FCC, ARRL)

(*****

HUNDT TO LEAVE FCC

FCC Chairman Reed Hundt has announced plans to leave the Commission later this year. In a letter to the White House, Hundt says that he has asked President Clinton to begin searching for a replacement to head up the agency.

During his three and a half years as head of the FCC, Chairman Hundt significantly changed the way that the FCC operated and how it interfaced with the public. He championed the idea of spectrum auctions, making the FCC one of the biggest money makers for the U.S. Treasury. He also helped to shape the future of telecommunications worldwide.

So far, contenders for Reed Hundt's position include FCC Commissioner Susan Ness, Kathy Wallman who is President Clintons' Deputy Assistant for Economic Policy and FCC General Counsel William Kennard.

Kennard, a Democrat could be top contender. Just last week President Clinton nominated him and Republican Harold Furchtgott-Roth to fill the vacant seats on the Commission. Hundt says that he will stay on as FCC Chairman until his successor is named.

FCC ISSUES NEW FORM 610

The FCC has released a new Form 610, dated March 1997, that is computer age friendly. This is because it actually includes a space for your Internet address, if you have one.

The other significant change is that the environmental impact question, formerly item 6, has instead become a statement in the applicant certification section. Here the applicant certifies that the construction of the station would not be an action which is likely to have a significant environmental effect.

According to the Gettysburg office, the FCC will continue to accept any of the three Forms 610 dated November 1993, March 1995 and March 1997 until further notice.

And the FCC also has a new version of the electronic Amateur Station Vanity Call Sign Request Form 610 V. This says the FCC says permits several applicants to file vanity applications at the same time using a single Form 159 and combine their fee payments.

The new forms are available via the FCC's Internet site at:

http://www.fcc.gov

and via the FCC's fax-on-demand service at:

(202) 418-0177.

Also, we have been asked to remind all Volunteer Examiners that the number for the FCC's National Call Center is:

1 (888) CALL-FCC.

This number may be used to obtain information on just about any subject involving the agency.

(From FCC releases)

DAYTON HAMVENTION BUSINESS

Last week we told you many of the highlights of this years Dayton Hamvention. We also told you that there was more to come.

Even though the attendance is estimated to be down this year, you could not tell that by all the activity both in doors and in the fleamarket.

Some vendors even sold out and had to send for more merchandise.

Dayton, once known for the event where amateur manufacturers announced their new equipment. May have once again attained that trademark.

Collins, ICOM and Tentec also introduced DSP pc based amateur transceivers as well. And the R.L. Drake Company returned to the amateur radio community with a 2 meter transceiver with a built in power supply that features independent wideband 2 meter and 440 receivers.

Daytons switch to the month of May seems to not only have helped in the weather department, but also in the new equipment department.

What will 1998 bring? We'll just have to wait and see.

As to actual attendance at Hamvention '97? It was down considerably. The numbers show that it dropped from around 30140 last year to 27120 this year. That works out almost 10% decline over the previous year, not 2% that we reported last week. The big difference though is that this year people had money in their pockets and vendors say that they were eager to spend it.

GOVERNOR DECLARES "AMATEUR RADIO MONTH" IN NEW YORK

New York Governor George Pataki has issued a formal Proclamation declaring the month of June as "Amateur Radio Month" in the Empire State. The document lauds New York's 38,000 radio amateurs for providing assistance in several areas. This includes service at public service events and emergency communications, participation in the upcoming Field Day event, the educational aspects of the SAREX and MIREX programs, and for promoting international goodwill.

Governor Pataki has been invited to attend a number of formal presentations of the Proclamation. He has also been asked to visit any of a number of Field Day sites to be established near the state capital at Albany.

(Via This Week in Amateur Radio)

(*****

ARKANSAS AMATEUR RADIO OPERATORS APPRECIATION DAY

And Governor Mike Huckabee of Arkansas is proclaiming December 5th as Amateur Radio Operators Appreciation Day in Arkansas. The state recognition day is the work of Mary Emma Walker, KC5VGF who single-handily accomplished this goal working with the Governors Office liaison Beth Ann Rankin.

ATLANTIC DIVISION AWARDS

Three hams have been honored in the ARRL's Atlantic Division. Joseph Nunemaker, KD3VR, has received the Atlantic Division Amateur of the Year award, Gerald Gavin, NU3D, was given the divisions' Grand Ol' Ham award, and Ron Raposo, N2JAW, was handed the Atlantic Division Technical Achievement award. All three were honored at the 63rd annual Atlantic Division Convention on May 30th in Rochester, New York.

YOUNG HAM OF THE YEAR '97 NOMINATIONS CLOSE JUNE 30

A reminder that the nominating period Newslines' 1997 Young Ham of the Year Award closes on June 30th. That's just about four weeks away.

In cooperation with Yaesu USA and CQ magazine, Newsline presents this award annually to a young ham who has contributed to his community or the nation using ham radio. Thanks to Yaesu and CQ, this years winner will receive an expense paid trip to the Huntsville Hamfest, a week at Spacecamp Huntsville and other surprises. To qualify, a nominee must be 18 or younger, be an FCC licensed radio amateur and reside in the continental United States. More information on the award and an official nominating form is available at:

http://www.arnewsline.org

When you get to the site simply scroll down and click on "Young Ham of the Year Award."

Award information and a nominating form also is available by sending a self addressed stamped envelope to the:

1997 Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Santa Clarita, California
91350

If you know of a deserving youngster, now is the time to write. Don't wait.

BOY SCOUT RADIO MERIT BADGE BOOKS

And don't be surprised if you start hearing some new young voices on the air in the very near future. It appears that scouts nationwide are once again looking at radio as welcome addition to their activities.

Rosalie White, WA1STO, the ARRL's Educational Services Director, says she has learned that the national office of the Boy Scouts of America headquarters has run out of the Radio merit badge book. Three thousand is considered to be a year's supply, but this year the supply is already depleted.

Rosalie says that this is good news to hams who know the importance of capturing the interest of young people and getting them excited about our great hobby.

(Via ARRL)

(*****

LOWER COST U.K. EXAMS

Overseas, the United Kingdoms Radio Authority and its City and Guilds testing facility have jointly announced that they are simplifying the format of the Radio Amateurs Examination. They say that this will result in reduced fees and a speedier release of results. The cost of the revised examination will be 26 pounds, down from the 38 pounds presently charged.

(Via RSGB)

(*****

THAILAND FCC EXAMS

And HS0ZCM says that he is looking for ARRL affiliated Volunteer Examiners visiting Thailand that will be willing to give a test session for United States issued ham radio licenses.

Currently there are only two extra class V.E.'s in Kingdom. They need three to administer a testing session. If you are interested contact:

hs0zcm@amsat.org

(Via HS0ZCM)

(*****

DX

In DX, HA0ZDU reports that HA5PP will be stationed in Aden, Yemen for a year or so. HA5PP says that is going to try to get permission to operate from Aden, and he will do his best to get his license approved and confirmed by the authorities in Sanaa.

And the Daily DX reports ET3SID in Ethiopia has been heard on 14.082 MHZ CW working Europe and east coast U.S. stations on RTTY from 12:30 to 13:30 UTC. Afterward he went to SSB on 14.284. If you work him, QSL as directed.

4717. More training for new Hams!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-03 00:00:00 UTC
From: teixeira <teixeira@ccnet.com>
Message-ID: <3393EBF7.7100@ccnet.com>
Source record: 196607
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In past, new Hams learned about Ham radio, how to operate ect. with the Novice license. With the no-code Technician we are getting 1st time Hams who know almost nothing. I have seen many problems, mainly operating procedures with new Hams. It's not their falt.....they need training!

I feel there also should be a 1st time training class required. When you make it through the class then you can take the test. "or" Hold a novice license for 6 months to a year.

It might also be a good idea to require a class before testing for the General and above licnses for HF operation.

Don, W6IQ

I agree they need training but it isn't related to the changes in
license classes, except to the extent that perhaps they're not
being welcomed with open arms and that there appears to be much
less elmering going on. Both of these problems are something that
existing amateurs need to help solve, not something that new
amateurs can be expected to solve.

> I feel there also should be a 1st time training class required. When
> you make it through the class then you can take the test. "or" Hold a
> novice license for 6 months to a year.

The only in grade requirement I can recall is that for extra class
licenses some decades ago. Requiring a class won't make up for
elmering and truly well intended coaching that newbies in any area need.
Hopefully the rather jaded attitudes of some that post to this
newgroup stay on the Internet and don't make it onto the air, but I
know that isn't completely true.

> It might also be a good idea to require a class before testing for the
> General and above licnses for HF operation.

Again, a class won't make up for on the air experience and mentoring.
In addition, a little more tolerance of newbies might go a long
way towards solving any perceived problems.

73,
Todd
N9MWB

4719. RS HTX-212 vs. HTX-242, and HT audio question

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-03 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <33946749.4CA3@hp.com>
Source record: 196609

Anybody have any opinions about how the discontinued Radio Shack HTX-212 2-meter mobile compares with the new HTX-242? I'm looking into a 2M rig, and am considering both a used 212 and, perhaps, a new 242. Or a use or new Kenwood or equivalent. What's the current best-buy in 2M mobile?

And as long as I'm asking about 2M, are there any HT's that have decently loud and clear audio? I had a DJ-580T (which I gave to my nephew when he got his license), and the audio was pretty marginal when in my car, which is why I'm wanting a mobile rig.

Thanks!

4722. Beginner Propogation Questions

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-03 00:00:00 UTC
From: jkane@earth.execpc.com
Message-ID: <5n1rd9ngr1@earth.execpc.com>
Source record: 196612

I am looking to buy my first radio. I have been trying to learn as much as I can about the different properties of each band, and the various radio models that work in them.

I am confused why the higher the frequency, the less power standard models have! That seems backwards to me, unless it is a matter of human safety, or type of use. I am tending to lean to the later of these except of course in the HT world.

I understand the basic propogation theory (or what ever it would be called) that the HF bands propogate farther than VHF. And, that low end VHF may propogate during certain conditions while UHF will not.

Now, This is all fine and grand while looking at the ionisphere. But, what about line of sight and ground wave propogation. Or, is it not called propogation when it is not a bounce?

I read Bob Simpleton's page on Transmitter Range. It seems to verify the idea that the higher the frequency the less range the wave can travel. But, there is also a power output in the equation. The higher the power, the farther the signal will travel.

So ... Why do the higher frequency band transmitters have 10-90 watt models, while the HF radios have 100-1500 watt models? Again, I am leaving the HT's out of this for obvious reasons.

A couple of questions to start off with:

Is there a point in transmission power where you no longer gain any range?

Is it possible to send 2M at a distance of 200 miles? (Even with a directional antenna?) Is it a reliable carrier, or will it depend on atmospheric conditions?

Will 2M and up frequencies bend as ground waves, or are they only line-of-sight waves?

I guess what I am looking for is a chart or something that shows maximum ranges for each wave, and at what point (if any) the power input doesn't gain enough to have any value.

For frequency XXX Mhz, does it max out at some point ...

.
.
P . |
O 4 |

```
W 3 _/
E 2 /
R 1 _/
1 2 3 4 ...
Distance
```

or is it ...

```
.
.
P .
O 4 _/
W 3 _/
E 2 _/
R 1 _/
1 2 3 4 ...
Distance
```

and continues to gain distance with each power increase.

Of course, there would be a different chart for each band, but I am hoping such a thing exists, or at least an easy to use equation that would work in a Spread Sheet to make one with.

Maybe I am missing a large piece of the picture here. Please let me know if that is true. I know that acheiving maximum power is not a goal to look to. I just want a better understanding of how the waves travel.

>73, Bill W7TI

Windows (any version) only works if you use off-the-shelf applications. If you care about hardware, or do anything out of the ordinary, it breaks. Windows assumes too much about IRQs, addresses and other hardware issues to work. Linux, and even DOS, allow you to fiddle with those. If you need to use your computer for development-- software or hardware-- windows will drive you nuts.

I use DOS, unix, windows and even OS-9 in my work. Windows is the hardest to use (defined as taking the most time for a particular task) and least "regular." Unfortunately, I need windows to run some applications, so I keep it and use it. Otherwise I would be using Linux or FreeBSD.

4724. Marconi Contest

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-03 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <865367354.4430@dejanews.com>
Source record: 196614

The II MARCONI MEMORIAL CONTEST HF 1997
(http://www.publi.it/ham/marconi)

1) Aim: The MARCONI MEMORIAL CONTEST HF
commemorates the II Century of RADIO and its father:
GUGLIELMO MARCONI. It's a world-wide competition:
everybody can work everybody, only CW.

2) Date and time: Every IV full week-end of June from 1400 Utc
Saturday till 1400 Utc Sunday. In 1997 it will be on
28-29 June.

3) Classes: 1)Single Operator 2)Multi Operator.
Subclasses of class 1: L)Low power (max 100W out) Q)Qrp (max 5
watts out). The operators L and Q in the class 1 will be
marked and awarded.

4) Bands and mode: Only CW, 10m thru 160m (except Warc bands)
are allowed according to IARU Band Plans. The band can be
changed only after 10 minutes you have been on it. The 10
minutes' count starts from the first QSO made on that band.

5) Exchange: The station send RST + a serial number from 001.

6) Qso/Points: Each QSO, verifiable by crossed checking,
count 1 Point.

7) Multipliers: All CQWW countries count 1 multiplier.The same
multiplier can be counted once for band.

8) Final Score: The sum of Qso/Points from all bands multiplied
by the sum of multipliers from all bands.

9) Logs and summary sheet: standard logs are necessary. A
summary sheet is required showing all the QSO details on each
band, class of entry, power, name, callsign, full address of
the applicant, callsign of the operators and a signed
declaration. Computerized logs on diskette are welcome only
in ASCII format. You can apply for the free software to the
Contest Manager: send a formatted 1.44 Mb diskette with SAE
and two IRCs for return postage, or via Internet at the site
http://www.publi.it/ham/marconi . Logs must be mailed within
30 days from the end of the contest and addressed to:
ARI sez.di Fano POBox 35 61032 FANO (PS) Italy.
Please enclose your station description and your comments. A
picture will be much appreciated.

10) Penalties and disqualification: Penalties and disqualification will be applied for violation of the contest rules. Each decision of the Contest Committee will be final.

11) Award: A plaque with certificate will be awarded to the No.1 top scoring station in each class and subclass. A certificate will be awarded to No.2,3,4,5 top scoring in each class as well as to the No.1 top scoring stations in each country in each class and subclass.
The Committee will send to the No.1 top scoring of single operator (if it is not a member) the "MARCONISTA" award of the MARCONI CLUB of LOANO.

Why bother with this discussion?
Ham Radio is both a hobby and a service (in times of emergency) to
special olympics, walk-a-thons, etc. Ham Radio is what YOU (the ham)
make it. That is why it is such a nice hobby/service.

>Any suggestions?

Kantronics, Mirage, and a variety of other companies produce amplifiers for HTs. Either look through QST, CQ, 73 or WorldRadio for the ads, or use one of the webcrawlers to find the websites for Amateur Electronic Supply (AES), or Ham Radio Outlet (HRO), or any of the other relatively national companies that have catalogs to send out, order the catalog, and look through the catalogs. I even think I remember reading that Radio Shack had a two meter HT amplifier, although I personally refuse to pay $3.00 for their catalog as all too often, the uncommon item I want isn't in stock, and I can mail order a similar item elsewhere for less, and get it sooner.

A possible modification to the current treaty regarding morse code testing is as follow:

"The maximum morse code speed testing requirement for general access (phone, digital, etc modes) to any band below 30 mhz shall be 5 wpm. Individual countries may test at higher morse code speeds for access to selected cw sub-bands within their country."

Hi Ed!

When are you coming out for dinner again (we can talk and make fun about
Carl behind his back... really... honest!)

The sooner everyone realizes that there is NO solution to the Great CW
debate which will "end the decisiveness", we'd be a lot better off. There
is no simple solution; whatever solution is ultimately decided upon will
still piss off some contingent of amateur radio participants (just like
incentive licensing, the novice enhancement, and the codeless tech did
before it.)

Instead, we need to decide what we want to accomplish with amateur radio
licensing. Once we have a set of goals, we can decide what structure
the licensing needs to take to fulfill those goals.

Of course there's no way to prove this in advance, but experience so
far has shown brief spurts of interest whenever there's a change that
makes it easier to get a ticket, but little real sustained, long-term
growth. To get that, we need to somehow attract people that have
probably never even heard of ham radio. No tinkering with CW
requirements or question pools is going to do that. We need to get
ham radio back into the schools, so kids will get interested young.
Getting more retired or semi-retired old farts isn't going to do us
much good.

>amateur service to take advantage of our wider band privs. Naturally

>will always have a place, for people who are shy and want to avoid others.

Well, computers have pretty much taken over as the haven for geeks nowadays. There's more money in it, too. However, communications (including RF comms) are going to be even bigger in the future than they are now, so there's plenty of incentive to get involved in hamming to learn about RF. Most hams with a good tech background in RF and computers can just about name their own price in industry.

No. The last time I asked a pertinent question of the ARRL, I got
such a condescending run-around that it left a sour taste in my mouth.
They basically told me that they knew what they were doing, and since
THEY knew, there wasn't really any need for ME to know.

P.S. Ever wondered just what all that money goes for that you send in
for dues? Yeah, I know they print a breakdown in QST every so often
in VERY small print, but it doesn't go into much detail as to who
actually gets the money and how it's spent, particularly at the
Section Level. Lots of stuff lumped in under that "misc." category,
too.

Yea, it's too bad we couldn't have a Volunteer organization like the
VEC's to confiscate equipment from pirates/outof banders/ jammers and
the like.

We could get lots of ham stations started in high schools with all the
nifty equipment we would be picking up.

This poster has hit this one on the head. I was in high school
rather recently (I'm class of 89). I went to a private high school for part
of that time and they would not _let_ a freshman attend Calculus. In fact,
if you tested pre-algebra in your freshman year, you would not reach
Calculus in your senior year. I wonder what high school teaches this stuff
in the first year......

There is a lot of elmering going on... If you consider today's
"elmering" to be acquainting oneself with the contents of a WB6NOA,
ARRL, or W5YI "question pool memorization kit" enough to pass a theory
examination.

One good thing about the licensing system of years past was that you
worked with an elmer to learn the necessary electronic theory and
morse code. You took your test and had to wait for months to get
your license. During that time you studied more and by the time your
license arrived you almost could go take the next level examination.

With today's "instant gratification", 'I want it all now and I don't
want to wait or work for it' mentality, we have "overnight" licenses.
You can buy a book at Radio Shack on a Friday, take your test on a
Sunday, and by Tuesday or Wednesday have your callsign and be "on the
air"..

Is that progress? I don't think so. There is no time for these people
to become acquainted with the community known as "amateur radio".

Of course, when I spoke out against "instant licensing" some time
ago, I was branded a "luddite" and "old fart".

However, this 'problem' goes to show that all technological progress
is not necessarily good when implemented.

>The only in grade requirement I can recall is that for extra class
>licenses some decades ago. Requiring a class won't make up for
>elmering and truly well intended coaching that newbies in any area need.

I still believe that the title of "Amateur Extra" is not one which you
can bestow upon yourself, but instead others must bestow it upon you.
It is a state of being bestowed upon you by those around you, for your
accomplishments and contributions to the amateur service. It is one
reason why I refuse to get an "extra" class license (in addition to having
a ready excuse when I'm working on a project w/ my friends -- "Gee,
I didn't know that was going to smoke -- I'm just an Advanced -- you
guys are Extras...")

Cecil thinks no such thing. He uses that as an example of an irrelevant
requirement for being a radio amateur. I can't comment on your intent
with regard to musical skills. OTOH I'm talking about the elementary
tools needed to be able to understand the very simple basic tenets
of electrical and electromagnetic phenomina.

>>And it is pretty important in terms of determining

But without a rudimentary understanding of the calculus, those tables will
appear to be arbitrary, and one may be tempted to ignore them. And without
a rudimentary knowledge of how the table was generated, how does one
interpolate values between the ones in the table? Hint: it is not a linear
progression.

>>It is also important to the understanding
>>of the operating curves of active devices so that one won't exceed one or more
>>safety limits in operating the unit.
>
>One does not need to work integrals and differentials to read and utilize
>the data from a device data book.

Given the family of E/I characteristic curves of a device, determine the peak
and average safe operating points for the device to avoid exceeding dissipation
limits and avoid generating non-linear distortion. If you can do that without a grasp
of the principles of the calculus, I don't know how (other than by blindly following a

cookbook recipe which may not be completely applicable to your application).

>>It is even needed to understand the inrush
>>characteristics of a power supply filter capacitor.
>
>If the fuse blows, check for shorts. Inrush, for a conventional linear
>power supply can be (and usually is) appproximated by a constant.
>Knowlege of calculus is NOT necessary to understand that the phenomenon
>exists, and to know how to deal with it.

To know the rating needed for the fuse of the supply, one needs to know the integral of the current with respect to time during the charging period. To know what peak current rating diodes one needs, one needs to know the dI/dt of the charging characteristic. How are you to determine either with a constant? And what value should be assumed for that constant?

For example, consider that you have a 20 ampere supply with a filter bank of 250,000 uF. The transformer has an open circuit AC voltage of 18 volts, and a loaded voltage of 16 VAC. What size fuse do you need, and what should be the peak current rating of the diodes to avoid damage from inrush? Assume that the only diodes available have a peak current rating of 1,000 amperes. What steps should you take to limit inrush current?

Those are some of the questions faced by anyone building or field repairing the sort of power supply commonly used in amateur stations.

I think you are confusing cookbook mechanizations with an understanding of the principles of the calculus. How could you understand the relationship between velocity and distance for an accelerating body in your beginning physics class in high school without a grasp of the principles of the calculus? Sure, you could memorize some formulas, but how could you understand why those formulas take the form which they have? Distance is the integral of the acceleration-time product, but if you don't understand what is meant by an integral, you can't appreciate that.

Apparently so. Note that our school district also offers instruction in Japanese for those of our students to whom English is a second language. Assuming that everyone in the South is barefoot and ignorant is a common mistake made by Yankees.

Of course even back in the late 50s when I was a student entering high school, introduction to the concepts of calculus was done in our second semester high school math course. That was necessary or we wouldn't have been prepared to deal with our high school physics course in elementary mechanics. And that was needed to enter our industrial arts shop classes in dynamic machine design. Otherwise students would be likely to do machine setups which would shake themselves apart.

Of course this instruction wasn't done on the formal level that Jeff thinks necessary. That could wait until college for those whose primary pursuit was abstract mathematics rather than the application of math to practical physical problems.

If you are going to use a power inverter while you are running
the engine (which is the only way to use one) you must have a LARGE
battery, two deep cycle moterhome battries are best in place of your
regular battry. You cant draw from the alternator to power the
inverter, it has to draw from the battries and the alternator will
keep them charged.

That is correct. Just as the Morse test is a test of modem emulation skill, the theory test is a test of electronic skills. Neither is a test of behavior, nor is it intended to be. When the psychologists can produce a test which reliably predicts future behavior, you might want to petition the government to impose one on amateurs. Until then, control of behavior will have to depend on post hoc enforcement.

Ah, hah! So the proposal by the ARRL to return to solid copy is just another attempt to dumb down the exams. I knew it! Vince was right all along. Those who don't want to dumb down the exam should tell the ARRL that they aren't buying into reducing the passing score for the Morse test from 70% to 20%. Just say no to only requiring 20% comprehension of the material on the Morse test.

2m, 6m, 10m and CB radio bands were open today.
(around 2:00PM ~ 4:30PM PST, June 3(TUE))

I heard some signals from ????? city, California on CB radio.
I tried to make some contacts... but I couldn't !!!!!
I thought a couple of people replied to me, but I couldn't copy it
!!!! Also I only could transmit in the AM mode... it wasn't a good
choice... but I don't have a transmitter for SSB.

I also heard some music (?) + CW on Channel 17 very loudly at one
time. If you knew where it [the station] was, please let me know.

I live in the southern central British Columbia, Canada.
It's quite good. I usually would hear nothing on the CB
channels... as I live in the small city, but I heard something in the
every single channel today !!

I also heard some continuous digital signal (continuous CW or
something ?) on 26.845 MHz very loudly when I was tuning my HF
scanner. I was wondering what it was. If you know something about
it, let me know.

Well... talk to you later sometime !!

Gary Coffman wrote: "In our school district students learn logarithms
in 6th grade..."

[second request - as usual you're spewing out falsehoods then hiding after
you get caught]

Hi Gary - Please provide for me a contact telephone number of your school
district. To be taught logs would require that they know about functions
and their inverses. Since the log fcn is the inverse of the exponential
fcn, these 6th graders would also have to know all the properties of
the exponential fcn (all the properties of the log fcn fall over from
those of the exponential fcn). These 6th graders would also have to know
that the exponential fcn is one-to-one so that it does have an inverse
(which we call the "logarithm"). They'd have to know that the domain
of the exp'l fcn becomes the range of the log fcn, and the range of the
exp'l fcn becomes the domain of the log fcn. They'd have to know about
strictly increasing and strictly decreasing functions (which is an
alternate definition of "one-to-one").

All the above is the preparation for learning about the logarithm; if
they don't know any of the above, then they aren't being taught logs.

Phone number, please.

Because on the HF bands, you can frequently get "skip" and work long distances. Skip is rare on VHF and above. Since most reception is line-of-sight at VHF and above, you really only need enough power to get out say 30-50 miles. Any more will do little good.

>I read Bob Simpleton's page on Transmitter Range. It seems to verify >the idea that the higher the frequency the less range the wave can >travel. But, there is also a power output in the equation. The >higher the power, the farther the signal will travel.

I had this same question about that page after first reading it as well. Someone here was kind enough to point out that what is happening is that higher frequencies use smaller antennas. Therefore, the power captured decreases with increasing frequency. But this power is not lost or dissipated. Think of it this way - you could install multiple antennas for VHF in the same space required for a single HF antenna. Therefore, each antenna will pick up less energy at VHF than at HF. The amount of power in a given amount of space is essentially the same at either frequency, given the same transmitter power.

Hope this helps. I'll let someone more knowledgable than myself answer your other questions about propogation.

While recognizing that Gary is capable of speaking for himself, I think that the point is that all of the FISTS hype seems designed to paint the illusion that they are somehow "the next wave" or something ... personally, I think that an international organization that can only muster a couple of thousand members in (apparently at least a couple of years) shows how limited the interest in such a cult really is ... that they try to paint themselves as "fastest growing" etc. is really an indication of how pathetic their cause is ...

Before Bill jumps in here, let me take the words from his mouth ... "yes, but you could choose to ignore EVERY SINGLE question on EME and you'd still pass the test and get a license ... not so with the Morse test, which is the ONLY aspect of ham radio with its own separate pass/fail element ... that is the part that is most onerous and outrageous.

I would suggest Super Morse, it worked for me. It uses the Farnsworth method which lets you learn the letters at a high speed (20wpm) but puts the words together at what ever speed you want(5 or 13 wpm).
Good luck, 73, John KU4GY

Well, since you continue to be master of insult, I'll give in to my instincts and say that the only consistently pathetic entity i've seen here is you.

Though you have no reason to be, you actually sound jealous. If you don't agree with FISTS on any issue that's ok. But this constant attack of any positive mention of the group is boorish and indicative of your paranoia.

However, you'll continue with the flames, and FISTS members will continue to fellowship and enjoy amateur radio and morse code in particular.

Send your contribution to SCO or whoever you want. Now that's a cult in the making...:). Nah, really, hard to imagine any cults in our service/hobby.

The point, Greg, is that ham radio is *supposed* to be FAR more than
a "user" service ... it's primary focus is on technical interests and pursuits.
(despite distortions to the contrary by those who wish to promote the
competitive games and "its JUST a hobby" perversions)

> It isn't a matter of needing CW to enjoy the hobby. Consider it a right of
> passage.

Rites of passage (hazing rituals) have NO place in government licensing
schemes ...

4751. CB Dx'ers more sociable than Hams

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-03 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <5mvnsg$43o@news.interlog.com>
Source record: 196668

I spent a number of years dx'ing as a CB'er and during those years made many contacts and had numerous excellent qso's. So naturally I was very excited when I got my amateur licence and the opportunity to work dx on so many more bands.

It didn't take long for that excitement to turn to disappointment when I discovered the overwhelming number of amateur dx'ers who consider "you're 59" a qso and "you're 59, qsl via the buro" an extended qso.

What has happened to the art of conversation? Unlike CB'ers who would talk about anything and everything, hams seem only to want to rack up totals and awards. My gawd, how shallow.

And Gawd help you if you do find a dx'er who does want to chat, because sooner or later some boorish dx'er who's wasted his life savings on band splattering linears will bust in for a 59 or to complain we're wasting precious dx bandwidth. You want to talk about wasted bandwidth, just look at the contests where entire weekends are wasted by many screaming cq and 59.

Personally I can't wait for the solar cycle to improve so that I can venture back to the outbands of 11 meters where dx'ers understand the art of conversation and who realize that dx allows us the gift of learning more about our friends around the world.

There's nothing left to say. It's all a semantic exercise, and a
complete waste of time, but don't let that stop you from
participating. Watching the fervent beating of dead horses does have
a certain amusement value.

>does include having fun, being a hobby, etc. But part
>97 does say its a service. I suppose you will belittle me

There's no contradiction. This has all been explained here recently.

>some more for saying what is written. It is a mandate to

>radio amateur service as being only a hobby then
>we are all ears.

I don't know one ham who got into the hobby because he wanted to
perform a "service" even though he hated every minute he spent
hamming. People get into ham radio for various reasons, but nobody
gets into it because it *isn't* FUN. It's not professional radio,
it's AMATEUR radio. That makes it a HOBBY, no matter what it happens
to say in Part 97. Read my lips: There's no rule that says a hobby
cannot be a service, and vice versa.

It seems you guys have a bone to pick with Microsoft and who doesn't?
But I have to disagree about Win95. When I first got it I was running
an old 386/33 with 8 megs of ram and it worked fine. Now I've
installed a P133 motherboard with 32 megs of ram (cheap anymore) and
it is flawless. I typically multitask several DOS and Windows
programs at the same time and never a hiccup. So how could Linux or
whatever be any better? Free doesn't count - I don't mind paying for
software if it's good.

>>stepping forward to provide leadership in this area, but has refused,
>>in some cases, to even get involved.
>
>I'd really like at least one example of how/when the ARRL
>has refused to even get involved.

I don't recall the exact details, but the ARRL declined to get
involved in cleaning up the mess on 20 meters a few years ago.

The ARRL has always been too little and too late in the area of
repeater coordination.

The ARRL let the two biggest amateur revolutions in recent times go
almost completely unreported until they were nearly over; FM/Repeaters
and packet radio. While 73 was publishing hundreds of articles on how
to build repeaters, QST had nothing. Even now, there's more printed
about 6 meter DX than about FM and repeaters. Same thing with packet.

Ham radio and computers. Same story, basically. (heh)

The ARRL refused to get involved in volunteer testing until the rules
were changed so they could get paid, then after they did get involved
they've tried several times to monopolize the process.

There are plenty of other examples, but those should suffice to
demonstrate the point.

>Additionally, what do you see is needed to provide
>the leadership you expect or desire.

They could start with a process of write-in ballots for uncontested SM
elections, and allow Techs to run, if that hasn't been changed

already.

They could revamp QST into something more useful and interesting than a compilation of boring statistics that nobody reads, Section Reports of interest to nobody but the people named therein, endless contest information that's of limited interest, etc. More "editorial" comment from other than ARRL propagandists, more letters to the editor, better explanation of technical articles. And why should we have to pay $31 bucks for QST, and then have to pay EXTRA if we want to get QEX, where all the new stuff gets explained? Put that stuff in the magazine, and let the DXers pay extra to get all their garbage.

WMP>>
WMP>>Todd Schroder
WMP>>KF4KHM

WMP>"Amateur Radio is a service. Its not a hobby...." Sen. Barry M.
WMP>Goldwater, K7UGA (R-Ret) - 1987.

"...extremism in the defense of liberty is no vice." Sen. Barry M.
Goldwater, 1964 Republican convention acceptance speech.

Meaning no disrespect to anyone in here, but, PLEASE, the word
SERVICE as used in Title 47 USC is a _regulatory_term_. The FCC has
said so more than once. Every single radio grouping in Title 47 has
the word SERVICE...broadcasting SERVICE, public safety radio SERVICE,
personal communications radio SERVICE, radiolocation SERVICE, even
citizens band radio SERVICE.

Everyone seems to be desperately trying to equate amateur radio
SERVICE as some sort of paramilitary group or national treasure trove
of communications capability. The amateur radio SERVICE is primarily
an avocational communications activity for citizens, totally
voluntary, required only to meet certain regulatory standards. While
the legalese language in Part 97 looks imposing, the amateur radio
SERVICE is nothing more than a HOBBY. An avocation. Voluntary.
Optional. It is NOT some quasi-military "service."

Nobody in the amateur radio SERVICE wears the same uniform, does close
order drill, or "enlists" for a given period of time. An amateur
license is good for a period of time just like all other licenses.
While some amateurs have "time in grade" higher than others, the U.S.
amateur radio SERVICE allows lesser time-in-grade class licensees the
same "insignia" (vanity call signs). Some feel this "insignia" gives
them command authority...not so, although they are sorely wounded
spiritually if authority is not respected. Sheesh. Lighten up, people.

Hnmmmm. Maybe its time for KE4IKT to take his great plan to the masses on the Art Bell Show. (Art Nell is W6OBB for those of you not aware.) This seems a great topic to call in on the "Wild Card Line." Its almost as laughable as the spaceship that was supposed to be in the tail of comet Gale-Bopp!

Oppps -- got to run. My own "West of the Rocky's Line" is ringing...

Hi all,
My son just recieved his tech plus and wants to start checking out hf. So I told him if he passes school I would get him a radio. Well he did. Instead of spending a ton of money on a big hf rig, I figured I would start him out with a 10 meter rig first to see if hes really gonna like it. If you can help me out it would be appreciated. You can email me at the following adresses.
zvpa38a@prodigy.com
andre49@juno.com
Thanks for your help

you have to keep pressing the PTT while you transmit DTMF codes (if I
understand you correctly).

> Personally I can't wait for the solar cycle to improve so that I can venture back to the outbands of 11 meters where dx'ers understand the art of conversation and who realize that dx allows us the gift of learning more about our friends around the world.
>
> Alan VE3XAG
> algollom@interlog.com

Hi Alan. Couldn't help but to respond to this one.
It really boils down to YOUR approach to DXing. If you really want a DX Ragchew, try this "CQ DX CQ DX NO QSL's, ONLY QSOs DE XX^XXX, I have generated pileups with that selective CQ.

Unless it is rare rare DX or a contest --- listen listen listen, until you hear a DX station calling CQ. Almost never fails that I can have an extended QSO when I respond. Much depends on what you have to say -- the "rig is, qth is etc" just won't get you much. Ask about the history of the their country, the work they do, places traveled, find common ground.

A few of the many many DX QSOs I've had include:
Falkland Islands -- ragchew about Antarctic exploration & the Island
Siberia -- Ragchew about POLITICS, his visit to the US and much more
South Africa --- QSO about Diamond Mining
England --- Zulu Wars and British History
Belize -- A Swede and I yakked about Andre's Polar Balloon Flight in the 1890's. He won't let any breakers in til we finished

Philippines --- their floods, WWII, his merchant marine travels
Japan --- A doctor, long discussions about medical practice,here and there
A retired Air Force Officer on Tonga -- history of Island, also he flew B-17s
A German station -- his father was a U-Boat commander
JA -- aboard a Muru -- great QSO about life on a merchant ship
Caribbean -- spice exports and his visit to New orleans
Many Many More

About contests -- they ain't allowed on 17 and 12M and generally don't go to the top end of the bands. I have never had trouble getting a QSO during a contest. Also if its a phone contest -- go to CW vice versa. I recall an hour QSO with a station in Iceland during a contest at 28.600 MHz. Ya gotta look for em because there are few of them and lots of us.

About bustin in -- A good DX operator will tell em to stand by till he/she finishes their qso (otherwise black-list) Also they have the option to announce -- no qsls or reports today. Many do this cause they want a QSO not a QSL.

If you can't get an extended QSO from the Caribbean, Australia, Europe even Africa -- you ain't trying or don't have the skills.

Morse code, basketball, bass solos, and now - the calculus. Some demand
Morse code, some demand the calculus. Morse code, the calculus - your
intent must be to provide a complimentary rail for us to bang against.

>OTOH I'm talking about the elementary
>tools needed to be able to understand the very simple basic tenets
>of electrical and electromagnetic phenomina.

For you, the basic toolkit includes a logic analyzer and spectrum
analyzer, for others it includes only a pair of dikes, a soldering
iron, and a volt-ohm meter.

Oh brother - (I visualize someone peddaling faster, and faster...) Yes,
and the log tables, and trig tables have always looked arbitrary as
well. We all lose so much sleep over this dilema.

>>One does not need to work integrals and differentials to read and utilize
>>the data from a device data book.

Given the family of E/I characteristic curves of a device, determine the

how (other than by blindly following a >cookbook recipe which may not be
completely applicable to your application).

I'm sure you're aware there are two commonly used design techniques: synthesis, and impirical. The latter is not as heavily reliant upon the tools you describe as you would have us believe. There is no denying what you are saying in an engineering environment. But you are describing the tools an engineer uses. I doubt you will find much support for the idea that the amateur radio operators must be qualified electrical engineers.

Obviously there are situations in which lacking the ability to solve a simple intergration problem would prevent someone from being able to properly design a circuit. But amateurs are not _required_ to design their radios. They are simply allowed to do so if they are so capable, and are required to operate them according to the law. There is no compelling reason to require amateur operators to have familiarity with calculus as part of an HF entrance requirement. This does not preclude the possibility of recognizing this ability as part of an advancement in grade beyond the introductory level. It's a license to learn, remember Gary?

>To know the rating needed for the fuse of the supply, one needs to know the

Ever hear of an R/C time constant? Please, what can you tell us about their common use as constants?

>For example, consider that you have a 20 ampere supply with a filter bank
>of 250,000 uF. The transformer has an open circuit AC voltage of 18 volts,
>and a loaded voltage of 16 VAC. What size fuse do you need, and what should
>be the peak current rating of the diodes to avoid damage from inrush? Assume
>that the only diodes available have a peak current rating of 1,000 amperes.
>What steps should you take to limit inrush current?

Are you fusing the primary AC, or the DC supply? For the primary, I'll need more info on the transformer. Of course, one must bear in mind that one can only purchase fuses that have at most 2 significant figures, so PRECISION TO FOUR DECIMAL PLACES IS A LITTLE LUDICROUS!! Besides, the ratio between the instantaneous peak current and the sustained current ratings of a slo-blo fuse is fixed. One therefore has to choose a fuse which will not blow under normal inrush current, but will blow when normal sustained current is exceeded (by greater than some amount, plus or minus). The choice is simply among the best available compromise values - less need for precision, yet again.

>Those are some of the questions faced by anyone building or field repairing the
>sort of power supply commonly used in amateur stations.

>>I recall my calculus classes in college (not in high school). I remember
>>something about the 100 integration skills we had to master the first
>>semester. It never struck me as "basic stuff" Gary. Glad you think it is
>>though.

>I think you are confusing cookbook mechanizations with an understanding
>of the principles of the calculus.

Your last reply also reported on my alleged "confusion", an approach you happen to share with Vince Biancomano. I think you take me for a fool Gary, and I don't appreciate your continuing to make these arrogant, patronizing remarks to me in post after post. For someone with such great faculties at his disposal, you display a profound degree of confusion when it comes to "differentiating" real from imaginary, and more to the point - practical from the ideal.

>How could you understand the relationship
>between velocity and distance for an accelerating body in your beginning
>physics class in high school without a grasp of the principles of the calculus?
>Sure, you could memorize some formulas, but how could you understand
>why those formulas take the form which they have? Distance is the integral
>of the acceleration-time product, but if you don't understand what is meant
>by an integral, you can't appreciate that.

You are evidently not familiar with the Harvard Project Physics courses, and others. The concepts are indeed taught (and understood) without reliance upon integral and differential calculus. Only in the special case in which the variable does not change linearly with time AND it's average value over the interval cannot be determined, is it necessary to evaluate the integral of the function. Differentials are expressed simply as deltas.

It has been shown that the calculus does not help the beginning student to understand and garner an intuitive understanding of the underlying principles - it in fact stands in the way of it. The late Richard Feynman at Cal Tech took great strides to avoid the dependence upon calculus in his lectures in the interest of helping students to gain a gut feeling for the material. Isaac Asimov does a very credible job treating the fundamentals, sans calculus, in his book "The History of Physics"

The majority of basic Newtonian mechanics problems can indeed be solved with algebra and trig - the same holds true for amateur radio related electronics problems. I'll not let you have the last word on this point Gary, unless it is capitulatory in nature. ;-)

Michael,

Go to your local radio shack store and look in the Parts RSU catalog.
Find the listing for stock number 19-1125 and get the RSU number for the
users's manual. You can have the salesperson order you a replacement
copy. It should take 10-14 days and you can have it delivered to your
home or business. I'm guessing the price would be approx $10 plus $2
shipping.

> there a mod that will enable you to store them?

David,

The HTX-212 will not store out-of-band freqs in the memory channels.
However, it will RX them in the VFO mode. The HTX-242, the newer
version of the HTX-212 does have the out-of-band memory feature. There
is not a mod to defeat this. The only mod is MARS/CAP which is a keypad
sequence.

I've had my HTX-212 for over a year and a half and enjoy it quite a
bit. However, when I go mobile with it in Downtown Columbus, the
intermod wipes out the RX on the radio, even with CTCSS. I've gone
through some other large cities (DAyton, Toledo, Flint, Saginaw) with
the radio and have not had the intermod problem. I think it's something
local in the Columbus area.

If life and/or property are in danger, you can do most anything of which
you are capable to render aid and assistance.

I have rendered assistance to unlicensed operators who had sinking
vessels at sea and were operating on ham frequencies WITHOUT any kind of
amateur radio licenses. In all cases I did what I could for them (in
some cases with a Coast Guard Station on the same HF frequency) and then
I promptly reported the incident to my local FCC monitoring station
while making appropriate entries in my station's log. In all cases, I
got an "atta boy" from the FCC guys.

The emergency just has to be legitimate in order to make the operation
legitimate.

They (the large ones, anyway) also do a lot of clever marketing to
sell bells and whistles that are cheap to manufacture. It costs money
to build a good RF design. It's dirt cheap to add software gimmicks
to make it look like the "new" radio does more, better, than the old
ones.

>is no incentive for them to bring out radically new designs as long as
>the amateur community doesn't vote with its dollars to confirm that
>decision. There have been a few radical designs offered to amateurs,
>and their sales were very lackluster. That's a pretty strong signal to

I don't recall many (or any) radical designs that were workable,
affordable, and properly advertised that didn't have some success.

>Many of today's amateurs are terrified of modern technology. They
>think that they can't understand it or work with it. So they've withdrawn

I disagree. Many hams I know have to have the "latest thing," even if
they don't have much use for it.

>familiar, following the same patterns that amateurs have come to
>accept. I'll be very surprised if Kachina sells many of their new
>radios. They are too radical for the tradition minded amateur.
>(I hope I'm wrong.)

How are they going to sell it if they don't advertise it? I've never
even heard of it until you guys mentioned it, and I check the ads in
two ham magazines every month. Perhaps I missed their ad. If I did,
it's THEIR fault for not catching my eye. Nobody's going to beat a
path to any door if nobody ever hears of the "better mousetrap." For
example, the WinRadio is a rather unique receiver targeted at SWLs and
scannists, and I've seen tons of data on that. I even downloaded a
software demo from their web site, and it's a very interesting little
gimmick. I understand similar stuff is in the works for hams, but
I've seen little or no information on it anywhere. Last I checked
Icom and Yeasu's web pages, there was nothing of particular interest,
other than the Same Old Stuff.

> And much of the future of communications systems is software based
>and software driven. Anyone with a PC can develop code. Amateurs
>working in the spare bedroom are at no real disadvantage doing that
>against some corporate drone in a cubicle of some conglomerate.

That's true enough, and a Good Thing. Still, most of that stuff needs hardware, and there's a shortage of people who integrate hardware and software in useable, reliable products.

I'm going to be in New York City from June 11-17, 1997, with flights from Minneapolis-St.Paul Int'l to La Guardia(did I spell that right??). I am planning on bringing my Kenwood TH-22AT, high-gain rubber duck(contradiction, I know), a PB-32 battery, wall charger, and a dry cell pack with about four packs of AA's. Also, I am going to bring my repeater books, and a log book. My questions are: 1. when I pack this, I am going to put it in my checked baggage-will security have a fit when it comes up (if so, what do I do?). 2. Any suggestions of what to pack/leave out? 3. How do I id?

Thanks and 73

I have a Kenwood TS440 and just found a Yeasu FL2100 linear at the Rochester Hamfest that I would like to hook up. The internal relay in the Yeasu switches on when it is shorted to ground. I have followed the meager instructions in the Kenwood manual about how to trigger this when the rig is keyed, but cannot seem to find the correct pin on the remote connector. I have moved the jumper on the Kenwood control rely to on, as per instructions.

Any help would be much appreciated.

Thanks. Rich, AA2UP

Maybe. They don't rule me. Nor do they rule any of the people I
know to be guru types. We all have a standard approach to
benchmarking the difference. We dump down and ooperate
in the presence of the person poasting, and let THEM compare
operating speeds and requirements.

Rather than give data for useless arguements, try it yourself.
See how much extra memory and processing capability
3.1, 95, and NT use up without justifying it in any way but
that stupes and dupes can use it cheaper.

The pro programmers that I know tend not to use the mouse to make
things easier for themselves when they have to use WIN xx,
they go to the keyboard, and run much faster than the mouse will
allow.

Win is cotton candy as far as I am concerned, and I can get by
without MS DOS, too. There are other op sys available, some

in shareware, so yo can get good with them and then register
them if you keep them.

MS does, not ruel me, I say again.

Depends what you mean enjoy the hobby.
The hobby is a service.
You are supposed to contribute your share to the service,
in service to the public, in contribution to the ever
advancing state of the technical AND communicative
arts, and to the maintenance of a TRAINED pool of
operators for the nation in times of need.

If you consider that to help support a Japanese electronics
manufacturer is all you need to do, then go for it.

If you are a cotton candy lover, and need nothing but
a smear of it on your face to be happy then have fun.

If you want to call yourself an expert, then, you have a different
set of requirements. You must be able to do teh proper proceedures
so that anyone, anywhere will hear the same thing when you talk, or
use abbreviations, or try to tell someone something in such bad
conditions that yo must use phonetics to get through.

You must be able to tell by ear and by instrument what the conditions
are in your equipment and the conditions in the other ham's equipment.
I call to mind a ham here in Tulsa, who came up on the frequency
I was on ot one time, and sait, "Old man, you sound about 5 k high,

Would you check your output? I did, and sure enuff I was a step high

on my little knob.

He did it all with his ear, no instrument, no help from any non-techie

who insisted on barely knowing enuf to stay near the radio so the mic
cord would not break.

He is a code freak, BTW, and says that's how he knows those things.

4798. Re: Hobby or service?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-04 00:00:00 UTC
From: aruder@pipeline.com
Message-ID: <5n3qjt$rv5@camel4.mindspring.com>
Source record: 196498

Someone said:

>Just what "service" does amateur radio provide? Passing out coffee
>from a Red Cross truck or totally non-essential communications in
>a disasted area that can now be provided by cell phone and numerous
>other methods? Listen to some of the stuff on 20, 40 and 80 meter
>phone and then come back and talk about "service." It's a hobby and
>a pretty ugly one at that.

Yah. Like Oklahoma City. Classic Example. The city services were
overloaded. The state services were in use. The TV said "Please
stay off your Cell phone unless it's an emergency." The news said the

emergency people complimented the people who stayed off the overloaded

cell-phone repeaters.

I was there. I never got near a Red Cross truck. BTW, the Salvation
Army was who was passing out food and coffee, and keeping the
overworked rescue volunteers from having to spend time going to some
appointed place to eat. In such an emergency, TIME is one of the
most critical parts, and the Salvation Army's despised donut shops
save TIME, and therwith, sometimes, lives. It is ever thus.

I didn't pass out sandwiches, but I did take a nurse across town to
get to a counselling session where the people who were there were so
tired they were getting owl-eyed.

I did get into a tiff with a cop who wouldn't let me pass, and
wouldn't let me ask him to call his boss until I blew up and said
"You're one of thos cops who can't listen, aren't you?" then he let
me ask what I needed to ask, which was where was his command post.
was.

I did haul a bunch of kerosene in my car for the heaters that allowed

doctors to work at the scene.

That Kerosene, BTW, is one of the things the Salvation Army doesn't
get credit for when people sneer at the idea of "coffee Trucks"
being what hams do at disasters. It aint just coffee.

If the hams weren't needed there, they were sure overworked for
nothing. The local hams were all owl-eyed.

I didn't see the Red Cross, except on TV, I don't know what they did.
I gave my wrist watch to a ham who was a doctor, and was using
ham radio to further the work of other doctors at the scene. A doc

needed a watch, having busted his. I got on the air and said I had a spare. Within the hour, I had given someone my car clock, my travel clock, and finally my wrist watch, and they were all needed.

The hams who needed my raggedy-ass rig included men and women so tired they didn't remember where they were some of the time. I had one lady grab the mike and walk away with it while talking about bandages. She came to the end of the cord, and soon after that the radio quit. I went back to tulsa soon thereafter.

I was there, and I believe the hams there did yoeman duty.

I was on the air during "Terrible Tuesday." If you don't know what that means you aren't qualified to discuss ham services anyway. The hams all over the midwest were sending health and welfare messages, not just requests for coffee. Their practice in field days stood them in good stead then.

Are you an old enuf ham to remember Wichita Falls? 40 people died. The city fathers said if it were not for the hams chasing the tornado and keeping the authorities warned of it, then the death toll would have been ten times that bad. hams again. Where were you?

I was in Springfield MO, when a hook came out of the clouds and all you could see was a thin black line flickering in an area of rolling wisps of smoke under the cloud base. When I reported it, some other ham came on and said "I'm right under that place and I can't see a thing" Maybe that was you?

Mostly, ham radio does perform services. You might look into trying to see what they do before you sneer at it.

ciao.

>bite-sized chunks instead of having to pass an "all or nothing" test.
>(especially since the code test is currently holding down that job).

In the several posts, I saw no mention of the need for slow and fast
lanes for traffic, so that the emergency needs may utilize as many as
possible of the available operatos.

If you have a 35 WPM ham tied to a 5 WPM ham, you will get very little
traffic passed, but if the hi-speed opors can get together, and the lo

speed hams can, too, then more traffic gets passed when it is most
needed. Call it impedance matching.

>webmaster@nuwaysupply.com

I don't know where you are, but 'your' bttery dealer isn't yours
at all, at all. You are his. The dealer we use in Tulsa, he would
do the tests free, and has several times.

Also he explained that to me, because a small lamp was left on, and ran the batt down.

Old batts were classed in total power storage. new batts are classed in cranking power.

New batts are less expensive to make, but do only the one job they are made for. If you are willing to pay more for deep-draft batteries,

you can have the old style. They require more service, and may not last as long.

That's what I heard.
Hope it helps.

>Am I getting closer?

Maybe. If he/she likes that part more than competence, yah.

For HAVE TO use, that depends on what you want. If you want to be a
button pusher all your life, and follow the others around, go-go-go.
Go Nocode.

If you want to be one of the competent, even super-competent
hams who seem to almost be wizards, then learn code, and STOP USING
VOICE or anything BUT CW, until you have completed 100 serious QSOs
with at least the minimum of info interchange, (you know, all that WX
HR, My rig... UR RIG?, etc.)

When you've done that, then go back to the phone lines and hear how
much more informative those bands are to you. You are on the way to
hearing the voice of the ric you are using, that of the other guy's
rig, the weather, the sun, and other things you never knew existed,
and you are on the way to using that new recognition to better your
performance.

Then, yo are on the way to being a REAL, good ham.
If you also learn good operating proceedures, of course.....

You saay at one and the same time that CW is not like music, and that
the effort to preserve an exactitude of expression still has
recognizable individual characteristics, and then you say that
musicians strive to stamp their personality on music? Where did you
learn music?

They only taught Jam sessions?

They didn't teach Classical music?

You didn't learn to play a piano in an absolute precision so that the
original intent of the original author shone through like a beacon
to the long ages fololowing?

You are right. You really are a no-coder in all senses of the word..

Someone answered:
>Isn't that the same for *any* mode of operation in the amateur service.
>To use SSB, you either know how to speak or you don't....

Negative in both cases. One of the biggest training needs in ham radio
is how to shut up at need and how to stay shut up at need.
the ham world, like the rest of the world, is populous with idiots who
got nothing to say, but insist on saying it anyway. I know very few
who can't improve in this area. I am bvad at it. You probably are
also..

The CW answer to this includes Q-signals. They increase efficiency
on voice WHEN PROPERLY USED. That is to say a lot in a short space.

The prob is that a lot of coders and a lot of no-coders also, don't
want to be effective and efficient. They seem to want to be
conspicuous consumers of spectrum.

The ARRL, of course, is only trying to promote itself as the final
authority in ham radio.

I don't count them.

We are a small Police Department in Texas. We have 20+ Bendix/King AN/PRC-127 hand units. These units were procured from the military for use by tactical officers.

Bendix/King is unwilling to talk about these radios other than the fact that they acknowlege they exist. It is very frusterating - makes one want to think about a boycot.

We have no real budget at the department and these radios have filled a void that otherwise could never have been accomplished.

I have heard of several modifications that can be performed on these units. I am seeking information on any and all modifications that can and have been done to these radios. Such as installation of the high/low power switch, installation of the scan switch, etc. . .

Also seeking anyone that has accessories that they would be willing to sell or donate (for tax write off) for these units.

Anyone with information on these units please e-mail me at hhmercer@airmail.net

Thank You

Sgt. Lindsay Hodgdon
Lone Oak Police Department
Lone Oak, TX

Anyone with any information of the AN/PRC-127, I am interested in visiting with you. Anyone with information about the AN/PRC-127 (A), Please let me know what the revision (A) is . . .

It should all work fine. Do you hear the relay going on and off?
This is important, it is loud enough to notice. The little black
switch on the top of the rig must be in the correct position for
the amp relay to be working correctly, put it into various of
the 3 positions till you hear the extra relay clicking away. Then
check the connections of the accessory connector if nothing is
going on. Check the output of the connector to see that the
resistance to ground actually goes to zero. Then you can tell if
the Yaesu amp relay has a problem.

Good luck.

I am not going to publish anything. I am not trying to build a
publishing empire like the ARRL.

Also, how are you going to get paid staff to work the
>halls of Washington and show up at the ITU meetings, if they'll even grant
>your group a hearing?

There will probably be no staff.

THat takes bread too! Frankly, I'll keep my
>membership in ARRL, and work for positive change to keep my hobby alive and
>vibrant into the next century. Go away little boy, take your delusions of
>grandeur somewhere else.

I am not your little boy. I am 48 yrs of age. Talk about a lack of
education!!
>
>Btw, this isn't a flame.

Boy it sure fooled me.

Be realistic for a moment. One buck ain't a lot,
>and any half green fool knows that you get more for your arrl membership.
>Can you provide a lab on a par with arrl labs for testing new equipment and
>making a report on it to membership?

Why have a lab when the ARRL members already pay for a nice lab? Our
members have the benefit (read someone's copy of QST ... in the
library if necessary) without the expense.

How about educational
>materials to get new folks into the hobby?

Don't plan to make any. The ARRL has many fine pieces already. ASK
them for some ... make them spend their members money not ours.

Before you can talk to large
>publishing houses about manufacturing a fairly good run of your product,
>you've gotta have some up front money.

Don't need to, everything will be free (publishing costs) on the
internet.

Carl,

ARRL does not have a PAC.

Like all corporations, ARRL is audited yearly for tax purposes
(yes, ARRL pays taxes) by an independent outside auditor, and
the results are published in an annual report. Contact your
director or HQ to learn how to obtain a copy.

Yes, allow me to add my suggestion for the J-pole antenna too ! I have built several, and use them when traveling, hiking, even fly one up a tree when I am camping ! Real easy to make, real cheap, and you have the pleasure/pride of making it yourself !

Here is the answer to my own question......Thanks

Don, W6IQ

97.407 Radio amateur civil emergency service.

(a) No station may transmit in RACES unless it is an FCC-licensed primary, club, or military recreation station and it is certified by a civil defense organization as registered with that organization, or it is an FCC-licensed RACES station. No person may be the control operator of a RACES station, or may be the control operator of an amateur station transmitting in RACES unless that person holds a FCC-issued amateur operator license and is certified by a civil defense organization as enrolled in that organization.

(b) The frequency bands and segments and emissions authorized to the control operator are available to stations transmitting communications in RACES on a shared basis with the amateur service. In the event of an emergency which necessitates the invoking of the President's War Emergency Powers under the provisions of Section 706 of the Communications Act of 1934, as amended, 47 USC 606, RACES stations and amateur stations participating in RACES may only transmit on the following frequencies:

(1) The 1800-1825 kHz, 1975-2000 kHz, 3.50-3.55 MHz, 3.93-3.98 MHz, 3.984-4.000 MHz, 7.079-7.125 MHz, 7.245-7.255 MHz, 10.10-10.15 MHz, 14.047-14.053 MHz, 14.22-14.23 MHz, 14.331-14.350 MHz, 21.047-21.053 MHz, 21.228-21.267 MHz, 28.55-28.75 MHz, 29.237-29.273 MHz, 29.45-29.65 MHz, 50.35-50.75 MHz, 52-54 MHz, 144.50-145.71 MHz, 146-148 MHz, 2390-2450 MHz segments;

(2) The 1.25 m, 70 cm and 23 cm bands; and

(3) The channels at 3.997 MHz and 53.30 MHz may be used in emergency areas when required to make initial contact

with a military unit and for communications with military stations on matters requiring coordination.

(c) A RACES station may only communicate with:

(1) Another RACES station;

(2) An amateur station registered with a civil defense organization;

(3) A United States Government station authorized by the responsible agency to communicate with RACES stations;

(4) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.

(d) An amateur station registered with a civil defense organization may only communicate with:

(1) A RACES station licensed to the civil defense organization with which the amateur station is registered;

(2) The following stations upon authorization of the responsible civil defense official for the organization with which the amateur station is registered:

(i) A RACES station licensed to another civil defense organization;

(ii) An amateur station registered with the same or another civil defense organization;

(iii) A United States Government station authorized by the responsible agency to communicate with RACES stations; and

(iv) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.

(e) All communications transmitted in RACES must be specifically authorized by the civil defense organization for the area served. Only civil defense communications of the following types may be transmitted:

(1) Messages concerning impending or actual conditions jeopardizing the public safety, or affecting the national defense or security during periods of local, regional, or national civil emergencies;

(2) Messages directly concerning the immediate safety of life of individuals, the immediate protection of property, maintenance of law and order, alleviation of human suffering and need, and the combating of armed attack or sabotage;

(3) Messages directly concerning the accumulation and dissemination of public information or instructions to the civilian population essential to the activities of the civil defense organization or other authorized governmental or relief agencies;

and

(4) Communications for RACES training drills and tests necessary to ensure the establishment and maintenance of orderly and efficient operation of the RACES as ordered by the responsible civil defense organization served. Such drills and tests may not exceed a total time of 1 hour per week. With the approval of the chief officer for emergency planning in the applicable State, Commonwealth, District or territory, however, such tests and drills may be conducted for a period not to exceed 72 hours no more than twice in any calendar year.

I know many who have learned Morse Code using Joe Speroni's
MORSE ACADEMY program. I also used it to learn how to copy
using a keyboard.

You can get to it at his website:

http://www.speroni.com/AH0A.html

He also has a great april fool's article there on supeconducting
antennas.

Morse Academy is probably gonna do the trick for you. It is available
at:
http://www.speroni.com/AH0A.html

Here is a brief comment from the notes on the program with respect
to sound cards:

"MA supports sound output via the PC's sound chip, the
Disney Sound Source, or an ADLIB/Sound Blaster
compatible music card. There are also instructions on
how to build your own sound card that operates from
the printer port (useful for notebook portable
operation). The quality of audio output from music
cards is good enough to produce professional code test
tapes."

I have found just about any hamfest that has somebody selling CDROMs has a couple of choices. I recently bought the "InfoMagic LINUX Developer's Resource" for $12. It contains RedHat 4.0, Slackware 3.1, and Debian 1.2 kernals. Plus X-Windows, and an enormous amount of software and on-line documentation (6 CDs). Installation was simple by making a boot disk from a dos machine. (I prefer the RedHat as it needs only a single boot/install diskette). I now have a cool X-Windows interface, AX.25 on packet radio, Web Server, FTP server, Telnet server, and much much more. Hard to beat that price for all the neat stuff!

Well, I'd suggest the manufacturers are building what the amateur
community is demanding. They aren't stupid, and are guided by sales
figures and competitive pressure just like any other industry. There
is no incentive for them to bring out radically new designs as long as
the amateur community doesn't vote with its dollars to confirm that
decision. There have been a few radical designs offered to amateurs,
and their sales were very lackluster. That's a pretty strong signal to
the manufacturers not to do that.

Many of today's amateurs are terrified of modern technology. They
think that they can't understand it or work with it. So they've withdrawn
to being appliance operators, and they want the appliances to be
familiar, following the same patterns that amateurs have come to
accept. I'll be very surprised if Kachina sells many of their new
radios. They are too radical for the tradition minded amateur.
(I hope I'm wrong.)

> We (amateurs) can not advance the art on our own anymore.
>The technology and cost of building has far outreached the
>normal ham. So advancing the Art has to take a different route.
>Service and advancing the Art will take us into the future,

>accepting carrots will let the spectrum fall to the advanced
>technology who needs it.

Nonsense. Of course we can advance the art. It is easier for us
to do so today than at any time in our past. We've never before
had such access to powerful and inexpensive components. And
those components make design easier for us by encapsulating
entire subsystems in single VLSI chips.

And we've never before had access to such powerful design tools.
We can use spice and other modeling programs to model circuits
and adjust parameters before we even begin to heat up a soldering iron.
We have schematic capture and board layout tools that allow us to
easily translate our design models to hardware. And thanks to surface
mount technology, that hardware is easier to build and debug.

And much of the future of communications systems is software based
and software driven. Anyone with a PC can develop code. Amateurs
working in the spare bedroom are at no real disadvantage doing that
against some corporate drone in a cubicle of some conglomerate.

If we *want* advanced radios, we can have them. The problem is
that most hams don't want such radios, and wouldn't have a clue
about how to design or build them if they did. The bulk of building
is done by nostalgia buffs working with vacuum tubes, or by QRP
enthusiasts interested in simple low power radios, or by those
building QRO amplifiers. Very few are interested in building high
performance radio systems. But they certainly could do so if they
wanted.

The components are there, the tools are there, all it takes is the
will to use them, and a bit of effort to learn about the technologies
available. Many hams have convinced themselves that they can't
understand or work with modern technology, but that's not true.
It's easier today than it ever has been. VLSI and DSP have seen
to that.

>power supplies.

What's instructive about this is that the entire transmitter uses only 11 active devices. A modern radio uses thousands.

But a modern voice and data radio can be built using only a MB1501 synthesizer chip, a MC2833 transmitter subsystem chip, and a MHW607-2 hybrid power amplifier chip. We could add a couple more chips, a MC13135 and a LM386, and have an integrated transceiver, all controlled and driven by a PC (or a single chip micro, buttons, and LCD display). VLSI has made that possible. We can design and build at the block diagram level today. It doesn't glow in the dark, but it doesn't occupy a relay rack either. We could
slip it in a pocket of our laptop's case. Any amateur versed in modern technology should be able to understand how it works at a glance. Unfortunately, too few amateurs, old as well as new, are versed in modern technology, and consider such a simple transceiver beyond them. That's a shame.

(In fact, that isn't even a modern transceiver. It is 80s technology. But a complete modern I/Q radio can be even simpler to implement, though most of it is in software.)

But of course that is not, and never has been, the meaning of elmering. Elmering has always been the process of befriending and helping along those who are newly into an activity. What new hams all too often get instead is the cold shoulder or insults from those with long experience in the field. The time for real elmering to begin is after the tests end.

In a life or death emergency, anyone can operate anywhere. You may have to
answer to someone afterwards IF it was your call as to whether it was
"life or death," however.

There's an incident I heard about a couple years ago where a station
owned
by the local Red Cross chapter was operated by an unlicensed operator
during an emergency. It was quite contentious because this individual
told other operators to get off the frequency, and offered no callsign.

I care, because I use it. Because we Amateurs are supposed to be self-policing, I go out of my way to "discourage" sorry individuals who don't deserve to be there.

As a self-policing group, we are SUPPOSED to jealously guard the territory to which we have legal title.

Bootleggers and pirate operators have no claim, no right, and no brains if they think there is any legally valid argument to support their illegal use of amateur frequencies.

If you are going to bootleg, stay below 28Mhz and we don't have anything to say about it... however you might get a chance to see how jealous the military and US Government can be when you usurp THEIR frequencies.

With the solar cycle changing in the other direction, it will near impossible to hide in the coming years... and light will shine on the cockroaches.

Operating a radio is like driving a car. It isn't a "right", it is a privelege.

IT can be done..however there are numerous restrictions

the situation MUST BE LIFE AND DEATH
NO PHONE access must be avail.in others words no phones in a reasonable
distance (judgement)
and all other forms of communications must be down or not avail
it can happen but not bloody likey.
bottom line
JUDGEMENT CALL but it can be done
I kknow i have done it..

Source record: 196536

Well, I've been out of amateur radio for a while, and now that I'm back and in the market for a 2-meter mobile, I see there's one by ADI. Really inexpensive...like $229 vs. $269 for the Kenwood/Icom gear. HRO says they're selling very well.

Anybody have an experience/opinion about these ADI 2M rigs? (Sorry if this has been asked recently).

Source record: 196538

On Wed, 4 Jun 1997, Bernard Scott Hale wrote:

> Don't do it.

Whyever not?

The problem with the TH-79A is that it was designed (according to the Tech I spoke to at Kenwood) "only for the *repeater* portions of the 440 side. This means, without an "out of band" mod, you can't access anything below (if memory serves) 438! Our Amateur bands go below that!

Doing the out of band mod lets you listen to *significantly* more than just the ham bands, and, in an *emergency*, "anything goes", and you may be very thankful that you chose to modify your radio so that you can summon help!

4841. for the ARES folks, etc.: freeware hurricane tracking system

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-04 00:00:00 UTC
From: jim@n5ial.gnt.net
Message-ID: <1997Jun4.001936.18524@n5ial.gnt.net>
Source record: 196548

First off, I'd like to apologize for the fact that this post is only indirectly related to amateur radio. The only reason I'm posting this here is because I know, from first-hand experience, that Hams along the US Atlantic/Gulf coast, particularly those who run UNIX, are likely to be interested. But since others may not be, I'll keep it short and to the point. I've set followups to e-mail, btw, for this same reason (along with the fact that these days, I am rarely able to keep up with non-work-related news).

I've written a freeware hurricane tracking program called JStrack. I wrote it as a UNIX-based system, but since it's written in pure Tcl/Tk, it should be able to be configured to run on any platform that Tcl/Tk is available for, which includes dos/windows, Macs, and others.

For more information, see http://www.gnt.net/~n5ial/jstrack.html or feel free to e-mail me directly. If anyone does get it working under any non-UNIX systems, or if you have any comments, suggestions, etc., I'd *DEFINITELY* like to hear about it.

With that, I promised to keep this short, so....

Later,
--jim

PS: I'm not an HTML guru, nor am I a tech-writer. Comments and suggestions on the web page are also quite welcome....

4842. QST All North Carolina Amateurs -- NC ARRL Field Organization has two internet mailing lists

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-04 00:00:00 UTC
From: errol@pobox.com
Message-ID: <3394bc71.34397006@news.ipass.net>
Source record: 196549

To: All North Carolina Amateurs:

The North Carolina ARRL Field Organization now has two new internet mailing lists (listservers), thanks to the efforts of Gary Suddreth, KD4YTU; Errol Casey, KD4IHW; and Steve Perry, KB4FXE.

The first list -- nc-arrl -- is for all hams in the NC ARRL field organization. You can post messages that will be quickly received by everyone else subscribed to the list.

The second list -- nc-arrl-announce -- is a "read only" list. You will receive announcements and bulletins from the NC ARRL Field Organization leadership.

I hope all North Carolina Amateurs with e-mail capability will subscribe to BOTH of these lists.

Instructions for subscribing to the lists are provided below, and, for those of you who are not familiar with mailing lists, a basic description is also provided below.

The exact nature of each list will be determined by experience as we use them. The "announce" list will be more formal, with bulletins posted by NC Section leadership. During emergencies and exercises, we will post situation updates (at least as long as internet service holds up.) We can also announce additions to the NC-ARRL web site, hamfests, and about anything else of section-wide interest. Note that we will NOT be copying W1AW bulletins, the ARRL letter, or anything else that you can receive by subscribing to another mailing list.

The "nc-arrl" list will be available for your postings and bulletins, and anything pertaining to the Field Organization is fair game. For example, if your ARES group is involved in an operation, post status reports. At the conclusion of the event, post a review. If you need advice on how others have solved a problem, post a question. However, local events such as club meetings, VHF nets, VE exam sessions and such should NOT be posted on the list. These activities can be listed in the appropriate sections of the NCARRL web site -- http://www.ncarrl.org.

These mailing lists are not designed to replace our radio communications in any way. Rather, they are intended to supplement and improve our radio system. Informal surveys at ARES and NTS meetings over the past year have shown
that internet e-mail is BY FAR the most common means of communication

to the greatest number of hams in the NC Section. With these mailing lists, we can reach Section Amateurs more quickly and completely than by any other means available.

Please forward this message (via e-mail and on nets) to all North Carolina Amateurs!! Also, pass it on to your club's newsletter editor and webmaster. It will take some effort to get all North Carolina hams with internet e-mail subscribed to these lists, but that's our goal!

Thanks & 73

Reed Whitten, AB4W
North Carolina Section Manager

==========

HOW TO SUBSCRIBE TO THE NEW NC-ARRL MAILING LISTS:

Send an e-mail message to:

hamlist@ncarrl.org (SUBSCRIBE only to this address - do NOT post
messages to this address)

Leave the subject line blank
(if you server requires a subject, e.g., AOL, put one in - anything in
the subject line will be ignored.)

In the body of the message, ONLY enter both of these lines:

subscribe nc-arrl
subscribe nc-arrl-announce

The mail server will pick up your e-mail address from your message.

But, if you want to subscribe with a DIFFERENT e-mail address, use the following
format:

subscribe your.email@your.domain nc-arrl
subscribe your.email@your.domain nc-arrl-announce

HOW TO POST A MESSAGE TO THE NC-ARRL LIST

Send your message as e-mail to:

nc-arrl@ncarrl.org (POST messages to this address. DO NOT SUBSCRIBE
or UNSUBSCRIBE to this address - it won't work!)

The message will be rapidly copied to everyone subscribed to the list, including yourself, so you should soon receive a copy of your message.

Any questions? Post your question to nc-arrl@ncarrl.org, or send
e-mail to:

Errol Casey
NC ARRL PIO
errol@pobox.com or kd4ihw@pobox.com

A BRIEF DESCRIPTION OF MAILING LISTS

Mailing lists are also called Listservers and Reflectors. Their job is to let you send a message or bulletin to ONE e-mail address, and have that message automatically re-sent to EVERYONE else who is subscribed to the mailing list. A listserver is physically housed in a specialized computer with a full-time, high-speed internet connection. The nc-arrl lists live in a computer at the Western Piedmont Community College, operated by Gary Suddreth, KD4YTU.

There are thousands of mailing lists operating on the internet. Each one exists to serve a special-interest area. Some lists have just a few subscribers, and some have thousands of subscribers. Messages sent through a mailing list should always be "on-topic" -- that is, it should be relevant to the purpose of the list.

When you subscribe to a mailing list, you will usually receive an automated e-mail response from the computer that houses the list, acknowledging your subscription, and giving you additional instructions about how to use the list. Then, whenever anyone sends a message to the list address, you will receive a copy of that message in your e-mailbox.

Some mailing lists are very busy, and a subscriber may receive dozens or even hundreds of e-mail messages a day from the list. We don't expect the nc-arrl lists to be anywhere near that busy, but during an emergency you may see quite a bit of traffic on them.

The ARRL operates several mailing lists that you probably should subscribe to. Among them are W1AW bulletins, the ARRL letter, and the "Fieldorg-L" list for members of the ARRL Field Organization. We will post regular bulletins on nc-arrl-announce with instructions on how to subscribe to these and other lists.

If I'm not mistaken, what has actually been proposed is going back to
the one-minute solid copy out of five minutes, like the FCC used to
give. So, let's see now, 1 out of 5.....gee only a 20% score to pass!
MUCH easier than 70%!

Well funny me. I always thought that an Amateur Extra Class ham was a
ham who had the words "Extra Class" typed on his license from the FCC.
Thanks for the insight from a 'more experienced (older) ham'.

If by "they" you mean FCC, then by gum they do have Internet connections!
WWW.FCC.GOV is an excellent site, with prompt posting of decisions, both
with the original (.WP) and HTML-ized versions, and various other info.
When you look for amateur radio there, you realize how small it is in
context... it's right where it belongs as one of many "services" in the
wireless bureau.

Carl, you bitched about someone else making pseudo-quotes with your name on them. You were so vehement, that you put PGP signatures on your posts for awhile. Yet, you do the same thing. What a hypocrite!

>I am looking into purchasing a 900 MHz cordless phone. I can't get any
>specs from the various owners manuals I've looked at. What is the maximum
>allowed power that these things can transmit?

I'm aware of some that put out 80 mW, which is 100 times more than
non-spread-spectrum units can put out. My escort 9020 runs 40 mW, direct
spread.

>Which models are "true" spread spectrum?

The Escorts are. Alas, they're also bankrupt, so I'm not sure who if anyone
will be making them any more. I think Radio Shack and others remarket them
too. Excellent performance, with range of a couple of city blocks in
favorable circumstances (lots more on open water, I'm sure). Absolute
corded quality, due to its 64 kbps PCM audio transmission.

I think the Lucent is spread spectrum too, though more of a hopper than
Escort's P/N coded direct spread. Said to sound good, but a higher price.

Even if completely accurate and in context, I'd hardly take the
nth-hand report of the self-serving comments of one bureaucrat (made
clear back in 1981) as proof that the ARRL's opposition to no-code was
the "primary reason" we lost part of 220.

It may or may not have been a contributing factor. The ARRL certainly
did nothing much to promote use of 220, so they certainly share blame
for the loss. I just question that the FCC gave away a large chunk of
our band (violating its own rules in the process) just to get even
with the ARRL for some personal grudges.

I suggest you don't start any fun and games in *this* area. Better
folks than you have been discouraged from breaking the rules around
here. We take a dim view of outlaws and bootleggers on the ham bands.
We have an active team who DFs jammers and other scofflaws. Perhaps
that's why we have very little ongoing problems with such things.

>To which the FCC either does nothing, or...on a good day...sends a form

Probably because you're a lazy, unmotivated, selfish individual who
probably shouldn't have been in ham radio in the first place. The
fact that you think "Radio Gods" are in the majority on the ham bands
tells me that you haven't spent much time on any of those bands. My
guess is that you don't have a ham call in the first place, since you
posted anonymously.

As long as you are licensed by the FCC and operate anywhere in the US and it's posession (wherever FCC has jurisdiction), it is legal. However, don't know about overseas or Canada.

Seems Space Station MIR is back again.
I heard some kind of signal on 145.800 too.

I will try to update the information on this newsgroup.

I hope nobody who reads this post thinks I"{m in any way endorsing what
this guy says.

On 1997-05-29 sco@sco-inc.com said:
>Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.policy
>>One potential name
>>already submitted for the new national organization is
See? It's already submitted. Did you vote?
Any members other than this goofball yet?

>the ....
>UNITED STATES AMATEUR RADIO ASSOCIATION
>Membership for new hams (within the first year after they become a
>ham shall be FREE).
>Membership for hams who are not now members of A.R.R.L. shall be
>FREE for the first year.
>Basic membership for all other hams shall be $1 for the first year.

ANd what is this guy going to use for funding? If you're going to lobby
for change, you have to lobby the fcc, and get the word out. This takes
money. You've got to be able to get out some literature which is well
written and appears professional before you can get the bureaucrats to even
listen to what you've got to say. How are you going to do this on such a
limited budget? Also, how are you going to get paid staff to work the
halls of Washington and show up at the ITU meetings, if they'll even grant
your group a hearing? THat takes bread too! Frankly, I'll keep my
membership in ARRL, and work for positive change to keep my hobby alive and
vibrant into the next century. Go away little boy, take your delusions of
grandeur somewhere else.

Btw, this isn't a flame. Be realistic for a moment. One buck ain't a lot,
and any half green fool knows that you get more for your arrl membership.
Can you provide a lab on a par with arrl labs for testing new equipment and
making a report on it to membership? I've read about more than one piece
of gear I've bought in Qst's product review. How about educational
materials to get new folks into the hobby? Before you can talk to large
publishing houses about manufacturing a fairly good run of your product,
you've gotta have some up front money. Well, guess that shoots that down
too---hmmm, wonder what real good you're going to do the ham radio
fraternity here in the Good ol' U.S. Could it be none? Looks that way to
me.

>KE4IKT

No thanks ... sadly Leslie (SCO) completely lacks credibility, because it's
painfully obvious that he doesn't have a clue as to how the FCC or ITU work
or what it takes to establish, finance, and run a national organization ... and
he's made it very clear that he's looking for support for HIS *personal*
agenda,
NOT looking to form the truly *representative* organization with the leadership
capability that we need ... it pains me to say that, because we *really* need
an organization, but I cannot say in good conscience that I have any faith in
Leslie's "join for free and send *ME* to Geneva and *I'LL* do (the impossible)
without a clue as to how things work" approach ...

As for FISTS, their political agenda is repugnant ... other than that and being
backward, stagnating, and anti-progress, I suppose most members are decent
folks ... as Luddites go ...

I certainly didn't mean it as progresive ... more like they are trying to
foster this image of FISTS as a growing, political dynamo ... rather than
simply a miniscule collection of radical Luddites trying to turn back the
clock and live in a nostalgia world ...

I *like* the idea of the IRS launching an investigation of the finances and
political activites of FISTS ... where does all that money go? do they
follow or violate the rules for PACs? inquiring minds want to know ...

For that matter, as a dues-paying member who is NOT pleased with
the lobbying activites of the ARRL, I'd like to see their PAC and publishing
empire given close scrutiny as well ...

Hams will buy anything if you hang a few bells and whistles on it.
They'll buy neat new stuff, too, if it's affordable and has a
perceived use, and is marketed properly. A perfect example is the
TNC, in all it's variations. Once the price dropped to a reasonable
level, many thousands were sold, and continue to be sold.

>HF spur gardens that use the same basic tx/rx architecture that

>of replacing VFOs with synthesizers and adding a bunch of memory
>channels and other bells & whistles features ...).

Well, if you come up with something demonstrably better and reasonably
affordable, hams will buy it. Seems to me that the commercial folks
are still using pretty much that same old technology, too, so it must
still be cost effective and technically feasible.

>Simply put, if hams continue to remain backward and fight like hell
>to keep new technologies from being used in the service, then the
>rice-box makers will keep making outdated rice boxes for outdated,
>technically backward hams ...

Crap. I see no evidence of any such conspiracy to keep you or anyone
else from producing new technology that's superior to present
products. If there's anyone to blame for sub-standard gear being
peddled to hams, blame the manufacturers and marketers, not the hams.
Show me a radio clearly superior to my 1982 IC-290 all-mode two-meter
radio, and I'll consider replacing it. By superior, I don't mean "so
damn small it requires a fan to operate" either. I've been waiting
for a 2 meter/220/440 tri-band handheld now for many years, but
nobody's making one.

Yeah, but that was ages ago. Most of today's EMEers are probably not
contributing much to the state of the art, at least on bands where
it's all been done hundreds of times before.

>Members of any radio service can occupy spectrum, look at CB, but to

>are being.

That's a distortion of the situation, though. We need innovators to
invent new stuff, but we also need lots of "bodies" to buy and use the
neat new stuff. Otherwise, what's the point? If all the ham bands
are going to be used for is technical experimentation and innovation,
then only a sliver of the present allocations are needed, and even
those could be shared with other services. Almost all the public
service functions done by ham radio could be done on commercial
frequencies. In fact, many hams do exactly that, using service bands
in conjunction with the ham bands when providing coordination for many
parades, races, charity events, etc.

The fact is that hardly anybody really cared if they gave away 220.
They still don't care. Were YOU active daily on 220 before they gave
it away? Are you active daily on 220 now? If not, you're part of the
problem.

>I am looking to buy my first radio.

Congrats, but do not buy a HT.

>I am confused why the higher the frequency, the less power standard
>models have! That seems backwards to me, unless it is a matter of
>human safety, or type of use.

It is a mixture if history and type of use. Whereas HF radios
are mainly intended for fixed operation (large antenna!)
VHF and up radios are to a large extent used portable or mobile.

Note that many VHF mobile radios come with around 50 W now.
And a matter of price: adding 100 W out to a VHF radio
used to have a significant effect on the price.

>Or, is it not called propogation when it is not a bounce?

When the signal finds its way from the TX to the RX this is
propagation.

>I read Bob Simpleton's page on Transmitter Range. It seems to verify
>the idea that the higher the frequency the less range the wave can
>travel. But, there is also a power output in the equation. The
>higher the power, the farther the signal will travel.

This is basically incorrect. 14 MHz will more likely go round the
world than 1.8 MHz. and 50 MHz will do so as well in the sun spot
maximum.

>Is it possible to send 2M at a distance of 200 miles? (Even with a
>directional antenna?) Is it a reliable carrier, or will it depend on
>atmospheric conditions?

Surely 2M depends on atmospherical conditions. But if you look into
the records of 2m contest stations, you will find the following
results:

Virtually every day there is propagation possible beyond the
horizon by a mode called tropo scatter.

For two stations the following distances (very roughly) can routinely
be achieved without favourable tropo conditions:

100 W, 10 dB antenna gain: 300 km (200m)
800 W, 10 dB 500 km
1 kW, 16 dB >800 km.
>

>Will 2M and up frequencies bend as ground waves, or are they only
>line-of-sight waves?

They scatter.

>I guess what I am looking for is a chart or something that shows
>maximum ranges for each wave, and at what point (if any) the power
>input doesn't gain enough to have any value.

In fact similar results are possible on higher bands,
if you keep the *size* of the antenna the same, i.e.
increase the gain. Having someone at the other end becomes
an increasing problem.

On 10 GHz e.g. new propagation modes come in, namely rain scatter,

>P .
>O 4 _/
>W 3 _/
>E 2 _/
>R 1 _/
> 1 2 3 4 ...
> Distance

Simple geometry sais, that the range goes as the squareroot
of power times antenna gain. But the farther you go, the more
effect you can expect from propagation conditions. That what makes
VHF and up intersting.

>Of course, there would be a different chart for each band, but I am
>hoping such a thing exists, or at least an easy to use equation that
>would work in a Spread Sheet to make one with.

The spreadsheet cannot predict weather fronts, sporadic E clouds
of auroras...., simple fornulas work on tropo scatter, however.
(see above)

73, good luck, Moritz

No, You didn't read your own post. I was simply responding to the
statement that the ARRL was proposing 100% copy.One solid minute out
of five is NOT 100%. That's all I was saying.

Actually, this is what the new FRS was set up for. Low power (1/2 watt) UHF operation on 14 channels (7 of which are GMRS channels also), no FCC license is required, just pick up the radios (Radio Shack, etc.) and use them.

Someone else pointed this out but I'll reitterate. Call cq dx ragchew or
cq dx qso no qsls qso only. I've ragchewed with plenty of DX. Also try
using other languages I have spoke with several spanish and latin
american stations who do not speak english so their only alternative is
to do "59 qsl" contacts.

> And Gawd help you if you do find a dx'er who does want to chat, because sooner
> or later some boorish dx'er who's wasted his life savings on band splattering
> linears will bust in for a 59 or to complain we're wasting precious dx bandwidth.

Then kindly tell him to go piss up a rope, if the dx station wants to
talk to you all night thats no one elses concern. No one has any
"rights" to work a dx station. I have had several break in to my dx
qso's and ask if they can "just make a quick contact" I politely ask
them to wait until my qso is over or try another day.

> You want to talk about wasted bandwidth, just look at the contests where

I'd like some details on this story if you have any. How did he loose
his HT? Did the FCC confiscate it? I suppose if it were a fender bender
and he had access to local ham repeaters it would have been in
appropriate.

I'll be in Cedar City for the Shakespearean Festival next
month and will, of course, bring my HT with me. After
hitting the books, I've found some freqs that look
promising. Have I missed anything? Can someone give me an
idea what I might expect out of the freqs on this list?

Anything along I15 south of Cedar City would also be helpful.

Thanks in advance! Please e-mail directly.

>May the beeps be with you, Jerry

Actually, Jerry, you never thought of it at all. A perusal of Deja Vu will show
that Squggy introduced the term 'beeper' in this forum. And I can assure
you that if Squiggy introducted it, the intention was indeed to be derogatory.

You should not CONSIDER the tones generated by CW operations. You should
turn on a radio and LISTEN to them. Morse code, as heard on an HF receiver,
doesn't 'beep'. It goes DIT and it goes DAH, and sometimes it goes CHIRP,
but it never goes BEEP. Your ARRL code tape at five words a minute may,
however, go 'beep'.

I'm sure you would find it unoffensive, it wasn't directed at you. If , in
fact, 'beep' was the correct word to describe the sound of Morse code on an HF
radio (which it isn't), and if, in fact, the term 'beeper' was 'descriptive of
the avocation' (which it isn't) then unless you or your friend Squiggy are
communicating on HF, using Morse code, with the posters in this forum to whom
you refer as 'beepers' (and I'm sure you aren't), the use of the term can be
construed only as derogatory because you have no idea who 'beeps' and who
doesn't.

Using your logic, can I assume that since most no code techs are no code techs
because they can't copy Morse code, that most no code techs are operating on
VHF, that most hams are good people, that most hams are buddies with other
hams, and that all human beings have an rectum, that is OK to call a no code
tech a "VHF Good Buddy Asshole Than Can't go Beep" and no one will be offended
by it ? I kind of doubt it. Even if your assumption that 'insult is in the eye
of the beholder' is true, I can't imagine too many no code techs who wouldn't be

offended if someone called them a 'VHF Good Buddy Asshole That Can't go Beep',
can you ?

So what do you think, Jerry ? Maybe we should conduct a poll of the no code
techs here and the people who use Morse code and see what they think ?
After all, being offensive is why most people are here, right ?

73, Jim KH2D

4889. Sunspots and Global Climate - An Appology

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-05 00:00:00 UTC
From: Mike Flaugher N9LLX <flaugher@thepoint.net>
Message-ID: <01bc71c5$67b8edc0$dfa2f6ce@flaugher.thepoint.net>
Source record: 196396
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.shortwave,sci.astro,sci.astro.amateur,sci.environment,sci.geo.meteorology

Over the last few months I've tried to "stir the waters" a bit to provoke some discussion on sunspots and climate, a subject I got interested in as a ham radio operator years ago. Lots of people responded and sent me e-mail, but an article I read the other day by George Reid at http://www.agu.org/revgeophys/reid00.html finally put the while thing into perspective for me. I realized then that I'd been preaching to the choir, and also that it's likely to be SOME time before a real solar-Earth connection is developed.

It seems there are a lot of scientists, good scientists at places like NASA, NOAA, Yale, Harvard, etc. who have found strong correlations between solar change and climate/weather change on Earth. The correlations themselves are not in question. The problem is that they are ONLY correlations and we do not yet understand the mechanisms. Every explanation why a decline or lengthening of the sunspot cycles correlates with global cooling and increase and shortening of the cycles leads to global warming are theory. Proof according to the "scientific method" is needed, and proof promises to be hard to come by in this case. The need for research is great, but right now a lot of our efforts are being poured into anthropogenic (manmade) global warming.

My appologies to anyone and everyone I may have misunderstood. Like many, I have a real gut feeling that the sun is a major player in our weather patterns and long-term climate, but I now understand that we have to play by the rules. Until these things get proven out it's premature to tout solar power as the real biggie. Too bad because if we HAD this knowledge it would go a long way toward helping climatologists explain the warming and cooling anomalies we've been experiencing since sunspot cycle 22 started into decline.

Check out the neat "Graphical comparison of cylces 21, 22 and 23" at the DX Listener's Club page at http://dxlc.com/solar/. Also check out cycle 20 which "correlated" with the cooling patterns of the early 70's. Is another cycle 20 on the way? Hmmmm.

Drew,

If you are not suggesting to do this because it is illegal, then why to
do suggest it and perhaps entice others to commit illegal acts. Your
posts are anti-ham and freeband specific (refering to previous posts of
course). Your regard on the radio spectrum is anti social and without
regard for others or agencies and institutions.

What is up with you?

Jon, CBer and Hammer

4892. Help! Changing XTAL in Mitrek Channel Element

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-05 00:00:00 UTC
From: Scott Sidener <sidener@umr.edu>
Message-ID: <5n6r1b$i0o$1@news.cc.umr.edu>
Source record: 196399

Hi,

I am trying to tune up 3 motorola mitrek radios in the ham band.

I have bought crystals for the channel elements and know that if the
freq. changes significantly then at least one cap and one inductor need
to be changed in the channel element to get the crystal to oscillate.

I believe this is called "compensating"

Can anyone prescribe what to change in the channel elements to work?

Here is what I have:

Original New
Channel Freq.
Freq.

168MHz 145MHz Both Tx and RX kxn1088 and kxn1086
460MHz 440MHz Same as VHF
46MHz 50MHz Kxn1085 and 1087 I think.

Any help would be greatly appreciated.

Thanks,

Scott Sidener N0WFL

>Every new ham who happens to
>have a mind of their own and who doesn't want to kiss the Good Ol'
>Boys' asses gets the same treatment. And guess what, another satellite
>service wants the ham bands. I say, TAKE 'EM!

Absolutely. As one who works in the commercial radio industry, I would have been a strong ally to help preserve ham radio against the commercial interests. But now, after experiencing firsthand the absolute waste of spectrum space that takes place there, I find myself a strong supporter of the little LEOs and the other new, hi-tech services on the horizon who wish to make their home on the VHF/UHF amateur bands. Which is a more efficient use of publicly-owned radio spectrum? A high-tech satellite system for digital communications...or a bunch of radio cops, little generals, and endless discussions about Morse code and health ailments.

This is just another example of what I call "the wimp factor" in American government today. Our representatives sign all these ridiculous treaties that bind us to the whims of the rest of the world, then stand by and watch as the other nations ignore the agreements. But WE can't disobey the treaty because "that wouldn't be right...we might make someone mad at us!" Screw the rest of the world! We're the strongest nation on earth, we should do what benefits us tyhe most. If they don't like it, too bad. What are they going to do about it?

So, basically, what you are saying, Spew, is that the Codeless Technician License, the license that was going to "get hoardes of technically elite" people into our hobby... The license that was going to "save our bands by flooding them with new blood" ... and so on, and so forth (pick up any circa 80's QST and read the numerous reasons why the Codeless Tech license was a "good thing") ... Has basically been a complete, utter, abject failure.

(PS: I wouldn't talk too loudly about "radio cops", since you yourself personally advocate going out and pinning other people's coax cables when you disagree with them....)

Dear Sir

The new version of the Aircraft Tracking Software for Windows
has already arrived.
This E-mail contains the following info:
-Program URL
-New Version Features

.....
For more detailed information and Demo Version Download visit
the program's homepage at

http://www.geocities.com/SiliconValley/Lakes/9420
.....
DON'T FORGET THAT REGISTERED USERS WILL RECEIVE FREELY THE UPGRADES
OF THEIR REGISTRATED VERSIONS.

New Version main features:

-Estimate waypoints feature (previews next enroute waypoints)
-Export to TXT feature (exports Airnav's log files to text so you
can show your friends your logs)
-Estimate ALL (estimates ALL slots waypoints and times with only one
click)
-Cross Dateline tracking (dataline crossing enabled: specially
for Australia and New Zealand Users)
-New Airport database
-Instataneously current flight coordinates and speed calculation
-Set System Date and Time within the program
-Registration via user Name, ID and registration number (for a quickly
registration of AirNav)
and more...

Thank you very much, Andre Brandao,

WHY?

Why should I have to manually decode Morse to use it. Why not also
require a sending test by touching 2 wires together. I can operate
packet without being able to manually decode it why shouldn't I be
able to operate Morse too.

I can't receive radio signals without a radio, why shouldn't I be able
to use a computer to operate Morse?

The Commissioners barely know that we exist ...

But some officials *are* a LOT like what you suggest ... witness Mr.
John Johnston of the FCC's response on the issue at

http://www.nocode.org/articles/wills.html

... "declining to help us to reach concensus" my ass!!! Johnston is,
I believe, an "old-time, Extra Class ham" and has ruled over ham matters
at the FCC for many years ... I am strongly inclined to feel that he is in
league with the league (no pun intended) WRT maintaining the Morse
Hazing Ritual as a gatekeeper over entry into our ranks ...

I find his dismisall of the validity of the protest over Morse to be
an abust of discretion and would urge all hams who favor modernization
of the regulations WRT Morse to write to the Chief of the Wireless
Bureau complaining about Mr. Johnston's actions.

>why

From what some hams who post here do post, one could wonder WHY
they have a ham license. So what ?

Depending on the topic of discussion, having a license does help in the credibility department, but as it has been pointed out many times, you don't need a license to post here. This is usenet, not ham radio. There aren't any stupid questions pertaining to ham radio. Since it's a hobby/service that attracts people from all occupations, many beginners have questions that may appear 'basic' to people with electronics or radio experience, but that in no way makes the questions 'stupid'. With all the online callbooks available on the internet, and with all the information Masa has provided in his messages, it should be real easy for you to go look up his callsign if you really need to know what it is. Keeping callsigns a 'secret' is a phenomenon that seems to be found here in usenet - most hams plaster their call sign all over the place, but for some reason that doesn't happen.

Your message makes me wonder WHY you have such a burning desire to know if Masa has a 'legal' ham license. Have you just been appointed Chief of the Internet Radio Police Department ?

aruder@pipeline.com (Lou or Annette Hinshaw) wrote:

>The CW answer to this includes Q-signals. They increase efficiency
>on voice WHEN PROPERLY USED. That is to say a lot in a short space.

Very seldom. In fact, it often takes more time to use a Q code on voice than to just use the proper word. For example, "XYL" is three syllables, whereas "wife" is just one syllable. Same thing with "QTH" and "home," not to mention that most hams will say something like "home QTH" or "work QTH." It's generally much better to just use plain English when you're on voice.

>The prob is that a lot of coders and a lot of no-coders also, don't
>want to be effective and efficient. They seem to want to be
>conspicuous consumers of spectrum.

There's a time to be efficient, and a time to have fun by communicating.

Yep. That simple fact is painfully obvious to everyone who isn't
trying to use the word "service" to promote some personal agenda.

>license is good for a period of time just like all other licenses.
>While some amateurs have "time in grade" higher than others, the U.S.

4916. * Update: Windows Logging/Packet Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-05 00:00:00 UTC
From: m.mcamis@valley.net
Message-ID: <5n500kive2@dartvax.dartmouth.edu>
Source record: 196457

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible
set of coordinated logging and packet features.

XMLog is available on my home page:

http://www.xmlog.com

A new version (2.00) is now available which includes
support for PacketCluster nodes operating on the Internet.

*** Feedback ***

Let me know if you:
- Want more info
- Can't fetch the file
- Want a diskette instead

Have fun...

How about the "frequency coordinators," whose primary purpose
in life is to assure that nobody else can use freq xxx.yy "because
that's George's repeater pair" ... never mind that George's repeater
is silent 95% of the time ... these are the people and groups who
will bitch and whine at the prospect of sharing with some SS system
that they would never know was there 99.9999% of the time if they'd
simply install a CTCSS decoder on their repeater system ...

I started playing with linux since Linus first offered it for ftp and I
have been a devotee ever since, the way it has advanced still amazes me.
I couldn't see any other outfit putting AX25 into their Operating
System.
Like you I do everything on a linux machine, work and play. The
dosemu(lator) and Wabi and Wine allows me to handle the EXCEL, Word6 and
PowerPoint stuff I get thrown at me. All this with no rebooting, all my
other stuff like X3270 via ppp into our Corporate mainframe and pdf docs
work fine.
Regards

I see the ARRL as functioning like a PAC ... they take
money (from us members) then they use (some of) it
to pay Mr. Imlay's bills so that he will lobby for them
in Washington and represent them before the FCC ...
I think it walks a lot like a duck ... and it certainly has
enough "quacks" ...

>Thanks John K7FD

The Al-811 does everything it's advertised to to. I bought it for the simple reason that I didn't have to run a separate line for it(my radio room is going to change soon, and I didn't want to have to run a line twice.) It draws 8 amps on 110V, sounds nice, loads easy, and if you poot a tube, they are only 15 dollars. I was amazed that it didn't run very hot. Fire up a 30L-1 and you can cook breakfast in a skillet on top of it. I am running 550 watts ssb at about 55 watts in from a Yaesu 990 (assuming the 990's wattmeter is accurate.)

I have no knowledge of the ALS600, so cannot offer any comparison.

I don't suppose anyone knows of a program/kernel/etc. that will
connect to a Netware 2.12 server? (I know about ncpfs but it appears
to only support NW3 and greater)

Is Wine now reliable? I've got a copy on a Yggdrasil CD set I bought
at Dayton last year but it warns in many places of instabilities in
Wine. Right now, I'm planning on simply setting aside 25% of my hard
drive for a DOS/Win3.11 partition. "lodlin" works great, allowing
easy switching between OSs, especially with the DOS partition mounted
on the Linux side too.

>Recently I was told by a RACES person that in an emergency any license
>class can operate on the HF bands. I have never heard of this.....at
>least not without a control operator? Anyone have an answer?

Yes, this is true. In the case of possible loss of life or property (that
type
of emergency) any band can be used by anyone.
Also true in case of disaster such as earthquakes, hurricane, etc.

An interesting note, an amateur radio operator recently used his handheld,
which he had converted for out of band, to contact the sheriff regarding
an accident. This was deemed not to be applicable to this rule, and he
ended up losing his handheld over the deal.

Actually Mike I never thought of it as derogatory. It is somewhat descriptive of the avocation. It does seem that the procodetest (yes I know I made that all one word) folks do to take insult from the term but I find it rather unoffensive. It seems to me a beeper is, one who beeps, considering the tones generated by CW operations it is a rather accurate term. I submit insult is in the eye of the beholder.

May the beeps be with you, Jerry

I went to his web page and he says his call sign is:

VE7JPN

which is interesting coincidence since he came from Japan.
Now, a quick QRZ look up shows that there is no VE7JPN, and that the
VE7xxx's are in VE7Ixx....

So, the question begs: Is he legal?

Your call....

The only thing I know of that would refer to what you're asking for is
MiniLinux by sp2ong.
It can be downloaded from ftp.li.ncu.edu.pl from the directory
/pub/hamradio or something.
It works out of the box and gets installed on a msdos partition.

I had lost my instructions to my 2m ht from RS. I called and the local
store could order me a replacement. It seems the cost was less than
$10. Hope this helps.

4938. Yaesu FT-747 Transmit Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-05 00:00:00 UTC
From: David Lafferty <djlaff@mtnhome.com>
Message-ID: <01bc71a6$7aa9f600$a565b4cc@djlaff.mtnhome.com>
Source record: 196479

A local ham friend without Internet access has requested I seek net assistance
for a problem with his Yaesu FT-747.

The radio will work normally for a period of time, then simply stop transmitting.
Sometimes turning the radio off and on will clear up the problem, other times
it has no effect. The radio usually performs normally into a dummy load.
He uses a tuner to an all band dipole, but thinks maybe the problem is in
a VSWR protection circuit in the radio. (He's used two tuners different
tuners and the problem will occur when both of them show a match).
If anyone has experienced a similar problem, please drop a line. Thanks.

From what I know about the law, in general, there are a LOT of laws
you can break. An example or two could include a person whithout a drivers
liscece driving someone to the hospital. Even though you broke a law, the
judge will look at it as "mitigating circumstances"- if they even
prosecute.

A more applicable situation would be if I where on a small pleasure
craft. If the other person on board was a Ham with a small 10 metre rig and
suddenly got injured of deathly ill, I could call for help on his rig- even
though I don't even have a ticket. A specific, life threatening situation
gives you a LOT of latitude in the eyes of the law. The terms and specific
laws vary from state to state. But in a general emergency.......???

I'm amazed at all of the "fools" that list their complete address in
the callbook, including myself. I've never been robbed because I
listed my full address in the callbook. I wonder if anyone else has?

If someone wants your address, he/she will get it and you can NOT stop
them. A determined person can find out where you live. Hiding behind a
POB will not help. (It may slow them down but it will not stop them).

Chris Imlays' services are not retained as a lobbiest, and
ARRL has nothing that resembles a PAC, walks like a
PAC, or talks like a PAC. PACs are set up to "financially
assist" favored politicians or causes. ARRL does not
participate in such assistance. Maybe you were thinking
of the NRA goons.

Why not?

It allows you to recieve much more, and when used in the extra low power mode provides for a nice signal generator on frequencys outside the ham bands. Will it transmit, yes, but thats always been the responsibilty of the amateur.

Check out qrz.com for thier radio mod page, I think you'll find several mods.

Hello everyone!

Once again I'll be out calling CQ on 50.400AM this weekend.

So far I have about 10 grids. Most from up north.

I'll call CQ on the hour starting at 10:00pdt through 20:00pdt.

Hope to get some new grids this weekend.

If you have not checked out my 50AM web page please do so.
I've also updated all the grids and calls to date.

Hello, I was wondering if anyone had the service manual for the TS-830S and would be willing to send me a copy. It would be very appreciated, and I will cover all expenses. Also if anyone has the mod to give the 830 a 7 digit readout (someone told me there was one) I would very much appreciate it also. Thank you for reading.

SB QST @ ARL $ARLB031
ARLB031 Vanity call sign update

ZCZC AG31
QST de W1AW
ARRL Bulletin 31 ARLB031
From ARRL Headquarters
Newington CT June 6, 1997
To all radio amateurs

SB QST ARL ARLB031
ARLB031 Vanity call sign update

Electronic filing has proved to be a popular among vanity call sign program applicants. The FCC in Gettysburg reports it received a total of 682 vanity call sign applications during May, and more than two-thirds of them were filed electronically.

As of June 6, the FCC had run vanity applications received through May 30 (the last business day of the month). The FCC granted 161 new call signs in the latest run. Another 207 applications were put aside in the work in process (WIPs) stack for special handling.

The FCC has not said when vanity Gate 3 will open.

The ARRL Letter
Vol. 16, No. 23
June 6, 1997

Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* Texas hams help in tornadoes' wake
* Hams in Bangladesh link stricken areas after cyclone
* Queen Elizabeth II to talk via ham radio
* Long-distance rescue
* RS-10/11 reported silent
* New regulations in Poland, Finland
* Solar update
* IN BRIEF: Address, call sign updates; Thanks, ICOM!
Phase 3D Ariane 5 vehicle heads for launch site;
KB5UAC to do more packet; Newsline's YHOTY
nominations due; Special event honors VOA;
Special event marks Lansing's 150th; Circus train
special event; Disaster preparedness workshop set;
Amateur Radio Supply closes; Western Samoa
QSL bureau closes; NE602A replaced by SA602A

HAMS HELP IN WAKE OF DEVASTATING TEXAS TORNADO

Last fall, it was just a test, but on May 27, nearly 100 hams in Travis and Williamson counties in Texas faced the real thing when devastating tornadoes swept through central Texas, killing more than two dozen, injuring many others, and causing extensive property damage. Hams from Waco to Austin were involved as the killer storms tore through the heart of the Lone Star State. District Emergency Coordinator Joe Fisher, K5EJL, of Austin, Texas, says the earlier training activity paid off. Back in November, ARES groups from the two counties and Red Cross participated jointly in a 6 to 7-hour-long drill. Hams tested their communication capabilities, and the Red Cross tested its disaster response effectiveness in the event of floods and tornadoes.

After the tornadoes struck for real, Fisher said the limited range of Red Cross radios made it necessary for some hams to shadow Red Cross officials and help with communication when needed. At one point, the Austin emergency medical services director was unable to reach the hospital in Georgetown, Texas, on the telephone to find out the condition of the hospital and if it

could receive and treat storm victims. Fisher says a ham was sent to the hospital and was able to relay the needed information back to Austin.

National news reports focused on the town of Jarrell, nearly flattened by one of the several tornadoes that struck the region during a 24-hour period. Weather forecasters say that a stationary front was responsible for the severe weather. "You can't imagine the devastation until you see it," said Williamson County EC Dan Poggemiller, KB5TWO, of Round Rock. Just eight years ago, another tornado killed one person and badly damaged Jarrell--located north of Austin.

Poggemiller said a two-meter repeater installed in Wallberg after the last tornado in Jarrell "worked flawlessly" this time around, after ham radio became the primary link to the outside world for a time when the cellular telephone network went down. "We were basically the only communications that they had for approximately two hours," he told Amateur Radio Newsline.

Williamson County Emergency Services Director John Sneed had high praise for Amateur Radio. "The hams were very instrumental in continuing to provide us the communications throughout the entire county during the tornado. They were able to help us as far as getting information from the tornado scene," he said.--Jennifer Gagne, N1TDY; Amateur Radio Newsline

BANGLADESH HAMS ASSIST IN CYCLONE RELIEF EFFORT

Ray Gerrard, G3NOM, was on business in Bangladesh recently when a major cyclone hit the coastal areas, killing 130, injuring 2000 and leaving 1 million people homeless. Telecommunication links with the stricken areas were cut for four days. To fill the gap, Gerrard reports, members of the Bangladesh Amateur Radio League (BARL) set up HF radio links (40-meter SSB) to help the Bangladesh Red Crescent Society and the Bangladesh CARE organization with their relief operations.

Two teams set off May 19 from the capital city of Dhaka to set up stations at Chittagong, Chokaria and Cox's Bazaar in the coastal disaster areas to keep in touch with the capital. The BARL leaders were Manzu, S21AM; Anwar, S21L; Rana, S21R; and Dipu, S21D. All radio equipment had to be carried in, including generators and batteries for fixed and mobile installations. At the Dhaka end, Saif, S21A, and Nizam, S21B (BARL president and vice president respectively), plus S21AS, S21AR, S21S, and S21X, and others operated the control stations.

An article in the Bangladesh Independent newspaper described the BARL effort as "a laudable role."--thanks to G3NOM; via the Internet DX Mailing List

ROYALTY ON THE RADIO

Great Britain's Queen Elizabeth II will take to the ham bands ever so briefly later this month while on a visit to Canada. Paul J. Piercey, VO1HE, president of the Society of Newfoundland Radio Amateurs (SONRA) reports that on June 25, 1997, the Queen will visit Cabot Tower on historic Signal Hill in St. John's, Newfoundland, to commemorate the 500th anniversary of John Cabot's "Voyage of Discovery." (This is also the 100th anniversary of Cabot

Tower, built in 1897 to commemorate the 400th anniversary of Cabot's voyage.) But there's also an historic radio connection to the site. SONRA operates a ham station in this building to commemorate Marconi's reception of the first transatlantic wireless signal in 1901 at a location some 300 feet from the tower.

SONRA arranged the contact between VO500JC, the Cabot Tower station, and GB500JC, in Bristol, England "in order for Her Majesty to make a brief statement using Amateur Radio," Piercey said. Bristol was the port from which Cabot began his voyage in 1497. Piercey and Dan Goodwin, VO1MX, will be the operators for the event.

Although all arrangements for the radio schedule are in place, Piercey says the exact time and frequency will not be announced ahead of time "because of obvious reasons of the possibility of interference." The QSO will be recorded on audio and video for historical purposes, however. Piercey said it's believed that this will be the first time a reigning British monarch has participated in this type of event using Amateur Radio. "We in SONRA are honoured to be a part of it," he added.

Coincidentally, Prince Philip will be opening Admiralty House--another historic site and now a museum--at roughly the same time, Piercey said. Admiralty House--just outside of St John's in Mt Pearl--was a North Atlantic listening post during both world wars. Piercey said SONRA is helping to install a modern ham station there "with a primary focus on satellite and SAREX communications" (see http://www.ucs.mun.ca/~brads/sonra), but the station might not be ready for use when the big day arrives. As the Patron of the Radio Society of Great Britain (RSGB), Prince Philip is no stranger to ham radio, but there are no plans for him to go on the air during his Admiralty House visit.

LONG-DISTANCE RESCUE SUCCESSFUL

Mervyn Dennis, VE3URN, of Toronto says he recently ran across a highway accident--on 20 meters! Dennis said he was in QSO with his long-time friend Rupert Walford, 6Y5RW, of Montego Bay, Jamaica, last month when Walford was involved in a head-on collision and found himself trapped inside his vehicle on a lonely highway. Dennis reports he contacted emergency services and Walford's spouse in Jamaica via telephone, while staying on frequency to offer comfort and assurance to the injured ham, whose radio amazingly was still operational.

Although Walford was extricated and hospitalized overnight, one passenger in the car died and three were hospitalized with serious injuries. Dennis said the accident occurred when another vehicle attempting to pass two other cars ended up in Walford's path and the two cars collided. He says Walford is still recovering from his injuries but has been active on the air. "I was speaking to him a few days ago," he said.

RS-10/11 REPORTED SILENT

The RS-10/11 satellite seems to have gone silent since late May, according to various reports. Jess Burmeister, KB0VUU, reports making two contacts on

RS-10 on May 25 (with KB4LCI at 1745 UTC and N0IBT at 1930 UTC). But, on May 26 at 1630 UTC, ARRL staffer Steve Ford, WB8IMY, reported hearing "nothing, not even the beacon." Since May 26, AMSAT News Service says it has received several other reports from around the world confirming RS-10 is silent. Mark Behrens, W4GP, states he checked all of the A, K, and T beacon frequencies for RS-10 and 11 and heard nothing. That particular pass started in eclipse and came into the Sun about half way through. There is no official word as yet on what has caused the silence of RS-10/11.--AMSAT News Service

HAM RADIO OVERSEAS: NEW REGULATIONS FOR POLAND, FINLAND

New ham radio rules announced in Poland and Finland give some insight into how ham radio is licensed and regulated outside the US. For example, how many US hams know that Poland has a code-free ticket and a minimum age to be licensed? The National Radiocommunications Agency of Poland announced two new classes of Amateur Radio license in that country, effective January 1, 1997. Class 3 includes a 5-WPM Morse code test and authorizes operation on 3.550-3.750, 28.050-28.500, 144-146, and 430-440 MHz. Class 4 has no Morse code examination and authorizes operation only on 144-146 MHz. Morse code and voice operation is permitted using an output power of no more than 15 W. IARU band plans are to be observed. The minimum age is 12 years. Call signs begin with the prefix SQ, followed by the usual call-area numeral and a three-letter suffix.

The Finnish Amateur Radio League, SRAL, advises new regulations for Finnish amateurs, effective April 1, 1997. The main changes are: (1) 135.7-137.8 kHz is available to all holders of general or technical (CEPT 1 or CEPT 2) licenses, with an output power limit of 100 W. (2) 3400-3408 MHz is available to holders of general or technical licenses. (3) The 160-meter band is expanded to 1810-1855, 1861-1906, and 1912-2000 kHz. (4) Output power is increased to 1 kW on HF and 150 W CW or 600 W PEP on VHF. (5) Telecommunications class ("VHF Novice Class") licensees have gained 144-MHz privileges plus all microwave bands allocated to the Amateur Service on a primary basis. (6) The numeral in a Finnish call sign will no longer be tied to the station's location, except for the Aland Islands (OH0). SRAL encourages amateurs to continue the use of district numbers to indicate their location. (7) Any available call sign may be requested, for a one-time fee of 2000 FIM (approximately $390 US!). (8) Keeping a log book is no longer mandatory. (9) Third-party traffic rules have been eased.

SOLAR FLUX, SPOT COUNTS DOWN BUT NOT OUT

Sun watcher Tad Cook, K7VVV, in Seattle, Washington, reports: Average solar flux was down about 3 points last week compared to the previous week. The sunspot count was down also. Geomagnetic conditions were stable, with the only unsettled period on June 3 when the planetary A index was 10 and the K index rose to 4.

Looking out over the next few weeks, the solar flux should rise to around 80 by mid-month, then drift back to the mid-70s. Geomagnetic activity should stay stable.

Dr. George C. Rybicki, KE8YX, of the NASA Lewis Research Center wrote to say that a recent article in a journal of the American Geophysical Union reports that the next solar cycle is predicted to have a mean smoothed sunspot maximum of 160, about the same as the last cycle. He also pointed to a popular theory which states that even numbered cycles are followed by a bigger odd numbered cycle, and this has been observed without exception for the past 150 years. The next cycle is number 23, and he says it may be a record, like cycle 19 in the late 1950s.

Sunspot numbers for May 29 through June 4 were 27, 35, 29, 33, 35, 20 and 16, with a mean of 27.9. The 10.7-cm flux was 75.6, 75.1, 72.5, 77.3, 76.9, 75.2 and 73.9, with a mean of 75.2, and estimated planetary A indices were 3, 7, 9, 6, 7, 10, and 5, with a mean of 6.7.

IN BRIEF:

* Vanity call sign update: The FCC office in Gettysburg reports it received a total of 682 vanity call sign applications during May--more than two-thirds of them filed electronically. As of June 6, the FCC had run vanity applications received through May 30 (the last business day of the month). The FCC granted 161 new call signs in the latest run. Another 207 applications were put aside in the work in process (WIPs) stack for special handling. The FCC has not said when vanity Gate 3 will open.--FCC

* Address, call sign updates: Vermont's new Section Manager, Bernie Capron, N1NDN, now is available via e-mail at n1ndn@arrl.org. Capron succeeded Justin Barton, WA1ITZ, as Section Manager late last month. Northern New Jersey Section Manager Roy Edwards Sr, formerly KB2LUO, is now AB2RE. His official e-mail address has changed to ab2re@arrl.org.

* Thanks, ICOM! ICOM America has donated a new IC-756 MF/HF/6-meter transceiver to the Maxim Memorial Station W1AW at ARRL Headquarters. In a letter to ICOM America President Robert Brunkow, K7NHE, W1AW Station Manager Joe Carcia, NJ1Q, expressed "deepest appreciation" for the donation. The IC-756 will be available for use by hams visiting W1AW. (Remember: If you plan to visit W1AW this summer and would like to operate, you must bring along your Amateur Radio license.)

* Phase 3D Ariane 5 vehicle heads for launch site: The second Ariane 5 qualification vehicle was shipped on June 2 from Le Havre, France, toward Kourou, French Guiana, aboard a freighter. Later this month, ESA and CNES officials are expected to decide the beginning of the launch campaign. On September 16, the Ariane 5 is scheduled to loft AMSAT's Phase 3D Amateur Radio satellite, a small science piggyback satellite, plus two "dummy" payloads. (AMSAT's Keith Baker, KB1SF, says Phase 3D efforts continue in preparation for the September launch.)--Orbital Report On-Line

* KB5UAC to do more packet: Ham-astronaut Mike Foale, KB5UAC, now settling in for his stay aboard the Russian Mir space station, says he'll try to do more packet while he's on board. "I am a neophyte at packet," Foale conceded in a recent packet posting in which he asked Earthbound hams to pass along any packet pointers. He also said he has no manuals on board to guide him in

using the equipment. An improved power supply recently was connected to the Mir packet station. Foale said they plan to run 10 W output "until we have confidence in it," and might increase power later. QSLs for contacts with R0MIR go to Serge Samburov, RV3DR, Box 73, Kaliningrad-10 city, Moscow Area, 141070, Russia.

* Newsline's YHOTY nominations due: Nominations for Newsline's 1997 Young Ham of the Year Award closes June 30. Newsline--in cooperation with Yaesu USA and CQ--presents this award annually to a young ham who has contributed to his or her community or the nation using ham radio. This year's winner gets an expense-paid trip to the Huntsville Hamfest, a week at Spacecamp Huntsville and other surprises. To qualify, a nominee must be 18 or younger, be an FCC-licensed radio amateur and reside in the continental US. More information on the award and an official nominating form is available at http://www.arnewsline.org (click on Young Ham of the Year Award) or by sending an SASE to 1997 Young Ham of the Year Award, Newsline, 28197 Robin Ave, Santa Clarita CA 91350.--Amateur Radio Newsline

* Special event honors VOA: Special event station K3VOA will be on the July 4, 1997, 1200 to 2200 UTC, on or around 7.240 and 14.240 MHz, SSB. The Maryland Apple Dumpling Radio Amateur Society (MADRAS) and the Voice of America Amateur Radio Club are sponsoring the operation from VOA headquarters in Washington, DC to celebrate the Fourth of July and VOA's 55th anniversary. Send QSLs (with SASE) to MADRAS, Box 2468, Wheaton, MD 20902.--Leo Boberschmidt, KA3TGY/MADRAS

* Special event marks Lansing's 150th: Amateur Radio will be on hand to help celebrate the Lansing (Michigan) Capital Sesquicentennial on June 14. The Central Michigan Amateur Radio Club, W8MAA, will be on the air that day from 1500 to 2100 UTC on 80, 40, 20 and 10 meters, plus some demonstration operation on 2-meter FM. The station will be set up on the lawn of the Michigan State Capitol in Lansing. Gov John Engler has been invited to take part. Dave Humphreys, N8WTH, says operation on 20 meters will be "mostly CW," while operation on 40 will be "mostly SSB." Specific frequencies were unavailable. Certificates will be available for those who QSL by July 24, 1997. Contact N8WTH, 7790 Jon Scott Dr, Grand Ledge, MI 48837-09279.

* Circus train special event: Talk to a circus train July 7, 1400 to 0100 July 8, and July 8, 1400 to 2000 UTC. Frequencies, 7.240 or 14.240 MHz SSB; 21.350 MHz SSB, and 146.55 FM. A color certificate is available. Send a 9x12 SASE and three units of postage (overseas hams should enclose four IRCs) to K9ZZ, 412-1/2 Ash St, Baraboo, WI 53913.--Jim Romelfanger, K9ZZ

* Disaster preparedness workshop set: The Disaster Emergency Response Association's Disaster Resource Center in Denver, Colorado, will hold a DERA Regional Workshop July 17-18, 1997, at Asheville, North Carolina. The workshop will focus on disaster preparedness in communities throughout the southeastern US, the Gulf states and the Caribbean. Amateur Radio response teams are welcome. The fee is $79 if received before June 15, 1997. For more information, a complete agenda or registration, write DERA Regional Workshop, Box 6558, Asheville, NC 28816; http://www.netcom.com/~n3dak/asheville.html.

* Amateur Radio Supply closes: Amateur Radio Supply in Seattle, Washington, has closed. All parts and inventory have been purchased by Radio Depot, Bremerton, Washington; tel 360-377-9067.

* Western Samoa QSL bureau closes: Phil Williams, 5W1AU, reports the 5W QSL bureau is being shut down due to a lack of finances and forwarding information for visitors to Western Samoa who are now being issued 5W0 call signs (there are four active permanent 5W1 stations, according to Williams). Williams says that while there is no formal reciprocal licensing agreement, a visitor who shows a valid ham license from his or her home country can get a 5W0 call sign for $15 and "about five minutes" of time.

* NE602A replaced by SA602A: Dan Wissell, N1BYT, reports that Phillips is dropping the commercial range (0-70 degree C) NE602A and replacing it with the extended temperature range SA602A. "This is because 99% of the volume production is in the SA602 part," he said. Wissell said that Phillips has no plans to stop production of the part, and the key specifications are the same.--Dan Wissell, N1BYT

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday,

January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

4954. ARLX014 Hams praised for help in wake of devastating Texas tornado

ARLX014 Hams praised for help in wake of devastating Texas tornado

Williamson County, Texas, Emergency Services Director John Sneed had high praise for the help provided by Amateur Radio after tornadoes struck that state late last month. Nearly 100 hams in Travis and Williamson counties--prepared by past practice runs--faced the real thing when May 27 devastating tornadoes swept through central Texas, killing more than two dozen, injuring many others, and causing extensive property damage. Hams from Waco to Austin were involved as the killer storms tore through the heart of the Lone Star State. District Emergency Coordinator Joe Fisher, K5EJL, of Austin, Texas, says earlier training activity paid off. Last November, ARES groups from the two counties and Red Cross participated jointly in a 6 to 7-hour-long drill. Hams tested their communication capabilities, and the Red Cross tested its disaster response effectiveness in the event of floods and tornadoes.

After the tornadoes struck for real, Fisher said the limited range of Red Cross radios made it necessary for some hams to shadow Red Cross officials and help with communication when needed. At one point, the Austin emergency medical services director was unable to reach the hospital in Georgetown, Texas, on the telephone to find out the condition of the hospital and if it could receive and treat storm victims. Fisher says a ham was sent to the hospital and was able to relay the needed information back to Austin.

National news reports focused on the town of Jarrell, nearly flattened by one of the several tornadoes that struck the region during a 24-hour period. Weather forecasters say that a stationary front was responsible for the severe weather. ''You can't imagine the devastation until you see it,'' said Williamson County EC Dan Poggemiller, KB5TWO, of Round Rock. Just eight years ago, another tornado killed one person and badly damaged Jarrell, which is located north of Austin.

Poggemiller said a two-meter repeater installed in Wallberg after the last tornado in Jarrell ''worked flawlessly'' this time around, after ham radio became the primary link to the outside world for a time when the cellular telephone network went down. ''We were basically the only communications that they had for approximately two hours,'' he told Amateur Radio Newsline.

Sneed said the hams ''were very instrumental in continuing to provide us the communications throughout the entire county during the tornado. They were able to help us as far as getting information from the tornado scene.''

4958. Re: Anyone Still Using Windows 3.1?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-06 00:00:00 UTC
From: "Jim Gerke, KC5OA" <jgerke@why.net>
Message-ID: <3398F868.2357@why.net>
Source record: 196299

Another opinion:

I bought a new laptop about 6 weeks ago. One week after I bought it, Win 95 crashed during the installation of a plug-and-play PCMCIA modem card (a MegaHertz 28.8 modem). Took me a week to recover. A week later, during installation of my ZIP 100 drive, another crash occurred. After another three or four days of trying to recover, I decided to do a wonderful thing.

I cleaned off the hard drive, loaded DOS 6.22 and Windows 3.11. I've obtained Win 3.11 compatible drivers for the PC, successfully loaded all my apps, installed the PCMCIA modem and ZIP drive with no problems, and am now very happily computing. And Windows 3.11 hasn't crashed in the three weeks or so that it's been installed.

To be fair, it's been my observation that Win 95 works perfectly for some people. Unfortunately, when it has problems, they are BIG.

Based on my personal experience, I certainly would not recommend to anyone that they upgrade to Win 95.

73, Jim, KC5OA

>What's the difference between serious DXing and any other QSO?

My intention was not to explicitly exclude any type of operation, but
with a typical setup for an entry class ham (10-100 W, wire dipole or
multiband vertical) you can work DX or take part in a contest.
However, those at the top positions in the overall scores usually have
high power amplifiers and large directional antenna structures.

>What's the intent of excluding an entry license from EME?

If someone manage to operate EME with 10-100 W, then by all means
operate. However, I have heard of exactly one EME QSO worked with a
solid state amplifier (about 10 - 20 W), but that was on 10 GHz with a
big dish.

>
>I can see limiting the use to commercial equipment, but once

I just tried to show some examples what is generally practical for
each intended class, my intention was not exclude some types of
operations categorically, sorry if you got that impression.

Yeah, I think Carl is pretty far off base here. Use of upconversion has solved most of the ills of multiple conversion superhets. And use of the superhet principle is still one of the better ways to deal with gain distribution and primary selectivity issues. Direct I/Q radios with DSP demodulation are promising, but the dynamic range isn't quite there yet at prices amateurs are willing to pay.

>>Simply put, if hams continue to remain backward and fight like hell

As to newer technologies, as long as they support old modulations, amateurs are not resistant to them. What I think Carl may be trying to say (or perhaps not) is that improved signal designs and codings are resisted by technically backward hams. Some of that resistance is even embedded in short sighted regulations.

>If there's anyone to blame for sub-standard gear being

Check out the IC-275. It is clearly superior to the old IC-290.

>I've been waiting
>for a 2 meter/220/440 tri-band handheld now for many years, but
>nobody's making one.

And you are likely to continue to wait. The 222 MHz band is only
available in North America. The much larger Japanese market
doesn't have it, nor does Europe. The North American market
is not large enough by itself to drive production of such a radio.

Let's extrapolate on that theory a bit: No taxpayer actually pays
taxes, they just collect them from whomsoever they receive their
money. But if we keep following the money back, we will eventually
arrive at the US Treasury's printing office. So we learn that the
only entity that REALLY pays any taxes is the US Government itself :-)

No wonder there's a US budget deficit!

Heh. You think the FCC could just grab, say, two meters or 20 meters
and all the hams would just fold up their tents and slink away? Not
likely. At least some of them would just get rid of all the
identifiers and go right on talking. Rounding up all the scofflaws
and getting them shut down permanently would be quite a chore for an
agency that can't even bother to shut down a few outlaws who are well
documented and offered up to them on a silver platter by Ham
interference committees.

Bodies add up to votes and money, both of which are prime movers in
the political process. If 220 had been as well populated as two
meters is now, there's no way in hell the FCC would have grabbed 20%
of it. I heard a lot of talk about bootlegging on 220 back then, and
I wouldn't doubt that at least some goes on. Most hams don't even
have 220 gear, so it's unlikely that bootleggers would get caught if

they were even a little bit cautious about where and when they
operated.

And why would that be? The inverter won't know the difference whether it is drawing power from a battery or direct from the alternator. Today's auto alternators can supply a minimum of 65 amps, and many are larger than that. So transient draws by the inverter would have to be really large to require battery buffering. (Inverters don't care if the power is a little dirty, they're going to chop it anyway.) A second battery may be advisable if you're going to run the inverter while the auto engine is *off*. Otherwise you may drain the cranking battery to the point it won't start the car.

Mailloop v3.0 is an industrial strength bulk mailer.

Mailloop v3.0 is a bulk mailing program for the internet. It can take a single message and broadcast it to either a listing of e-mail addresses or to a listing of newsgroups. Creates custom newsgroup lists by filtering NNTP servers. Creates custom e-mail lists by extracting them from newsgroups. Can also extract e-mail addresses or newsgroup names from other protocols. Built-in NNTP, SMTP, POP, FTP, HTTP, EXEC, CGI, WHOIS and FINGER clients. Anti-cancelbot feature. Automatically processes remove requests. Includes extensive on-line help.
The most powerful bulk mailer available. Requires Windows 95 or NT 3.51+ and internet access.

The "Program" Mailloop is only available in English.

For more info goto: http://205.199.4.219

It is both, as well as, until recently, a matter of cost. Only in recent
years has it become cheap to produce (relatively) high power at VHF+.
RF exposure is becoming a concern, and the VHF spectrum is where
power densities need to be lower for human safety. And also the type
of use is important. Most VHF operation is line of sight (or at least not
beyond the radio horizon) FM operation, often with the assist of a
repeater station. Thus high power is of relatively little use.

>Now, This is all fine and grand while looking at the ionisphere. But,
>what about line of sight and ground wave propogation. Or, is it not
>called propogation when it is not a bounce?

It is still called propagation, but the modes are different.

>I read Bob Simpleton's page on Transmitter Range. It seems to verify
>the idea that the higher the frequency the less range the wave can
>travel. But, there is also a power output in the equation. The
>higher the power, the farther the signal will travel.

Well that's not quite right. For ionospheric propagation, the closer you
are to the MUF (Maximum Usable Frequency) the less absorption your
signal will suffer, so the lower power you can run for a given distance.
For example, when the MUF approaches 30 MHz, a watt or two will
work the world on 10m, but a watt or two won't even be heard above
the atmospheric noise on 75m by a station only a few miles away.

Power is a factor, of course. For every doubling of distance, the power
at the receiver drops to 1/4th, IE received signal strength is proportional
to the inverse square of the distance between transmitter and receiver.
This is the inverse square law. It tells the entire story in free space, but
for terrestrial communications paths, there is much more to be considered.

>So ... Why do the higher frequency band transmitters have 10-90 watt
>models, while the HF radios have 100-1500 watt models? Again, I am
>leaving the HT's out of this for obvious reasons.

Well, atmospheric noise sets receiver sensitivity at lower HF, so you have to
have enough signal to exceed the noise. And there is much more interference
on HF, so again you need more signal to override that. By contrast, the noise
floor is very low at VHF+, and channelized operations suffer very little interference
from other operators. So you can use less power. And again, until recently it was
expensive to produce lots of power at VHF+.

>A couple of questions to start off with:
>
>Is there a point in transmission power where you no longer gain any
>range?

Well, for terrestrial operations the answer is yes. If you can make a contact
with the antipodes with 2 watts, which you easily can when operating near a 30 MHz
MUF, more power won't bring you more range. In other words, the longest distance
on Earth is finite, once you span that you can go no further. And for VHF+ line of sight
operation, more power won't bring you more range than the radio horizon (though you
can exceed that with other propagation modes in some circumstances). Roughness
of terrain has an effect on the distance to the radio horizon for line of sight operation,
and antenna height is the overriding factor which sets the distance to the radio horizon.
At VHF+ only three things matter to line of sight range. They are 1) antenna height,
2) antenna height, and 3) antenna height.

OTOH, if you're using groundwave propagation on lower HF, more power will
continue to yield more range out to the first skip zone. But the amount of power
required may be unreasonable to generate, IE it becomes a matter of diminishing
returns. Our friend the inverse square law says that to double the distance we
have to quadruple the power. To double it again we need 16 times the power. Etc.
Because the groundwave path is very lossy, pretty soon the power required becomes
unreasonable.

For extraterrestrial operation, more power equates to more range indefinitely,
but we haven't found anyone out there to answer us yet.

>Is it possible to send 2M at a distance of 200 miles? (Even with a
>directional antenna?) Is it a reliable carrier, or will it depend on
>atmospheric conditions?

Yes, under certain conditions a range greater than 200 miles is easily possible.
When there is a condition called *tropospheric ducting*, signals on 2m can span
the Pacific between California and Hawaii (or along the Gulf coast between Florida
and Texas, and sometimes along a frontal boundary deep inland). High power is
not required. HTs have been used on the California to Hawaii path. This is a waveguide
type of operation and signal losses are low for signals travelling in the duct. For signals
outside the duct, no communications is possible.

There is also a propagation mode called forward scatter which can extend 2m signals
beyond the radio horizon. This *does* generally require considerable power. The signal
is literally scattered off the molecules of the air. A few hundred miles is possible at
allowable

amateur power levels. And there are aurora and meteor scatter modes of propagation. Both can extend communications range up to a thousand miles or so. Power requirements for these are modest. Of these various propagation modes, only forward scatter is consistent. The other methods all require special conditions to exist.

>Will 2M and up frequencies bend as ground waves, or are they only
>line-of-sight waves?

There isn't a true groundwave of consequence at 2m, but the radio horizon is about 20% further away than the optical horizon, so some bending does occur. This is called *looming* and occurs in the atmosphere, not along the Earth/Air boundary as true groundwave does.

VHF+ signals can also bounce off of obstructions, IE a high building, mountain, etc. This can allow the signal to reach areas which aren't in direct line of sight of the transmitter. This type of propagation is called multipath, and is generally considered a nuisance, but it can be useful at times to fill in null zones in the coverage map.

>I guess what I am looking for is a chart or something that shows
>maximum ranges for each wave, and at what point (if any) the power
>input doesn't gain enough to have any value.

It isn't simple enough to put on a chart. Amateurs spend decades learning the peculiarities of the various propagation modes. Even the professionals don't fully understand all of them with enough precision to answer your question in more than general terms. You can spend your entire amteur career just exploring all the facets of signal propagation, and some amateurs do.

>>Paul OH3LWR

Paul,
What's the difference between serious DXing and any other QSO?
What's the intent of excluding an entry license from EME?

I can see limiting the use to commercial equipment, but once
that is accepted, I can't see how anything about the type of operation
should be precluded as long as the entry level license holder
is operating within frequency and power constraints.

Gary, if the ARRL is a Not-for-profit organization they would not
pay federal income taxes. Taxes of other types may be waived
as well depending on the jurisdiction.

>This is a widely misunderstood fact. People who call for "soak the fat
>corporations" taxes are really calling for more taxes on the *customers*
>of the corporation, and those are likely to be individuals of modest means.

Gary, your understanding of macroeconomics is flawed. It is not
clear that customers of a Corp would pay the taxes. For many reasons
(such as competiiton, duh) this pass-through may not be feasible.
Also it is not clear that the customers are always of modest means.

No, I don't feel cheated at all. This statement is typical of your
poor grasp of English and grammar.
>well... you have to learn better English too... to know the actual
>fact. got it ? No frame wars desired.

I speak, read, and write English quite adequately, so this statement
makes no sense either. By the way, it's FLAME not FRAME. Do you begin
to see your problem with the language? Turn off your computer, go out
and take a study course in English and grammar. After you (hopefully)
learn to write English well enough to be understood, THINK before you
post any more of the stupid and silly nonsense with which you have
been wasting so much bandwidth.

SILENT KEY

From the Liverpool & District ARC: It is with much regret that we must notify all of the members of the passing of club treasurer Michael Bogos VK2KSI. He was a quiet fellow who did not say much but was always there to get stuck into anything that needed to be done. We will miss him and our condolences go to his family.

Vale Michael Bogos VK2KSI

--Submitted by Garry VK2TSR for the Liverpool & District ARC

DIVISIONAL NEWS

The next examinations will be held at Amateur Radio House Parramatta next Sunday 16th June 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

--submitted by Eric Fossey VK2EFY - Divisional Secretary.

AFFILIATED CLUBS OFFICER AND COUNCILLOR
RESPONSIBLE FOR WESTERN AND RIVERINA AREAS

I will be visiting Griffith and Wagga Wagga 18 - 22 June and intend to have informal meetings with WIA members in Griffith and Wagga Wagga with the intention to discuss matters dealing with the WIA and Amateur Radio and also to take suggestions back to council.

Times dates and venue of meetings will be on next weeks broadcast.

-- Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

DURAL COMMITTEE MEETING

A meeting of the Dural Technical Committee will be held on Sunday the 22nd of June. it will start about 11am. Further details in a later broadcast

THE KEMPSEY AND DISTRICT AMATEUR RADIO CLUB INC. IS
CURRENTLY TRIALLING ITS TWO METRE REPEATER IN A NEW LOCATION.

THE SITE IS MOUNT YARRAHAPINNI, APPROXIMATELY THIRTY
KILOMETRES NORTH OF KEMPSEY, WITH AN ELEVATION OF 500M.
THE ANTICIPATED PRIMARY COVERAGE AREA IS FROM TELEGRAPH
POINT, TO JUST SOUTH OF URUNGA, EFFECTIVELY OVERLAPPING
THE COVERAGE AREAS OF VK2RCH, COFFS HARBOUR, AND VK2RPM,
PORT MACQUARIE, AND FILLING A SIXTY KILOMETRE SECTION OF THE
PACIFIC HIGHWAY WHICH PREVIOUSLY HAD NIL, OR POOR REPEATER
COVERAGE. A TOTAL OF ABOUT ONE HUNDRED KILOMETRES OF THE
HIGHWAY WILL RECEIVE COVERAGE.

AT THIS STAGE THE TRIAL IS DUE TO TERMINATE ON 14TH JUNE BUT
AN EXTENSION OF THE TRIAL PERIOD IS BEING SOUGHT.
THE REPEATER IS ON 146.875 AND REPORTS ARE WELCOME.

--SUBMITTED BY RAY WELLS, VK2TV, REPEATER OFFICER

WICEN NEWS

A new event on the WICEN calendar is the St Alban Horse Enduro, to be held on the weekend of 28-29th June. Around six operators are required, from 4am to 2pm, with some checkpoints requiring 4WD access. Please contact Andy VK2XRX if you can assist.

Another new event is the Eastern Confederation of Games, to be held over four days from Tuesday the 8th to Friday the 11th of July. The event will be held in and around Bathurst and will probably only require low power 2 metre equipment. Being held over 4 days during the week will obviously restrict the number of people who can participate, however there are a few enticements. Firstly there will be free accommodation available. Secondly, lunches will also be supplied and finally, there is a good chance that out of pocket expenses for petrol will be re-imbursed. At least 12 people are required. For more information and/or to offer your assistance please contact Peter Carter VK2ETK on (063) 61-3439 or Adam Roberts VK2XRA via email on "aroberts@ix.com.au". Those dates again, Tuesday the 8th to Friday the 11th of July.

On Sunday 22nd June, the Hunter region will be providing safety communications for the "Lake Macquarie Australian Half Marathon" championships, and the event co-ordinator will be Peter VK2YGM.

Over the weekend of 28th and 29th of June, the same weekend as the St Albans Horse Enduro, is the Wilderness Rescue Nav Shield, and once again WICEN has been asked to support this event, held in the bush, west of the Central Coast. The event may entail camping out overnight, so you may have to be totally self-sufficient including all food and shelter, not to mention radio
equipment and power supplies etc. A four wheel drive may be necessary to access some checkpoints, so if you do not have one, it may be that you will be dropped off on Friday night or Saturday morning and picked up on Sunday afternoon. For more info, or to offer your services please contact Alan VK2YYJ on telephone 015-097-217, packet radio as VK2YYJ at VK2TGB, at at work on (02) 9839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further
information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

BITS AND BYTES

Here again we take another irregular and irreverent look at the high-tech industries, and the computer industry in particular. Actually, it has been about two years since the last episode...

The year 2000 is looming closer, and already credit cards are starting to appear with an expiry date of "00". Now, you would think that the credit card providers would have had ample warning about the inability of "legacy" software to deal with this, but no; it seems that a major provider is having trouble with its ATMs and EFTPOS terminals, which treat "00" as invalid. We hope that the programmers concerned have not already booked their visas out of the country. It may not be a good idea to have any money in the bank on 31st December, 1999, but as so many people will be incorrectly celebrating the new century they will probably never understand why.

It has not been a good week for Intel. Two of its competitors, Cyrix and Digital, are busy doing what seems to be The American Way, and are suing Intel for alleged patent infringement over the technology used in the Pentium Pro and the Pentium II. It would appear that the speed-ups used in these chips are the direct result of Cyrix's and Digital's efforts.

Speaking of these Pentium chips, it would seem that once again, the floating point processor is faulty. Listeners with long memories will recall how the then Pentium quickly became known as the "Approximator", due to its defective floating point unit. Well, it seems Intel has done it again.

Apparently, when converting a floating point number to an integer, you are not warned of an overflow condition, so the program blissfully proceeds unaware that it is now dealing with random garbage.

We reckon that Intel's designers ought to fly in an aircraft designed by computers using their chips; the irony of this situation is that only Intel's Pentium Pro and Pentium II are affected; their competitors', the subject of the aforementioned lawsuit, are not.

Meanwhile, over at Microsoft, the publicity department is busy downplaying the significance of a programming blunder that leaves every Windows 95 and Windows NT box vulnerable, especially if connected to the Internet. Apparently, all you have to do is send a TCP/IP packet with "out of bound"

data -- common enough in the Unix world -- to the box, and it instantly crashes; your scribe can vouch for the veracity of this. The press release on the Microsoft Web page is an exercise in obfuscation -- it calls it an "issue", not a bug, and makes a snide remark about Unix -- and they would be a lot more credible if their fixes actually worked...

And now, a story closer to home. An unspecified number of Ozemail users had their passwords cracked using a readily available program called, not surprisingly, "Crack". The fact that the affected subscribers were not billed in
that time is scant recompense for not being told about this for some time. We are surprised that not only had Ozemail apparently not heard of Crack, which can decode encrypted Unix passwords, but also that they do not appear to be using shadowed passwords (where the encrypted passwords are kept in a file not able to be read by mere mortals). We reckon that they, or their users, ought to read a good book on practical Unix security.

Be listening next time for another critical look at the industry giants.

-- Dave VK2ZTB

DX NEWS
MALYJ VYSOTSKIJ ISLAND - The group of 12 operators from Finland and Russia will be active until June 16, using the callsigns OH5AB/MVI and R1MVI. Look for CW, SSB and RTTY activity on 160 to 6 meters, including the newer bands. No satellite operations are expected, however.

TONGA - A35SQ will be active until June 16 from Ha'apai, and A35DB will be active on RTTY until June 9.

BAHAMAS - C6AIE wil lbe active from Abaco until June 19. Activity will be on 80 to 2 meters.

FRANCE - Special Event station TM0RSE [TM-zero-RSE] has been active this weekend, and will finish operations today (Sunday)

ITALY - Listen for several Italian stations signinging with and IP1/ prefix from Gallinara Island, IOTA EU 028 today (Sunday). Activity is expected on all HF bands, including the newer bands. Some 6 meter and VHF/UHF SSB activity is also expected.

US VIRGIN ISLANDS - NA4I/KP2 will be active from June 12 to 18. Activity will be mainly on 6 meters, and this includes an entry in the ARRL VHF Contest this month. Look for W6JKV/KP2 to be active in the ARRL VHF Contest as well.

BRAZIL - To celebrate the 100th anniversary of Belo Horizonte City, ZW100BH will be active until December 14. Activity is expected on all bands and modes.

CAMEROON - Mark La Point, ex J5UAI, is active in Yaounde, Cameroon. He plans to be active on all bands, using CW, SSB, RTTY and other digital modes. Presumably, he will have a "TJ" prefix.

PALAU - V63ME is active from Ponape, IOTA OC 010, and Yap, IOTA OC 012. He will also sign T88ME from Palau until June 10. Look for him on 20 and 15 meters.

MEXICO - Sacrificios Island is being activated this weekend by the Valle Radio Amateur Club with the call sign XF4NVA.

AFGHANISTAN - YA/PA3BTQ is now active for an unspecified period of time.

--ARRL DX Bulletin 25, dated 5th June, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

A reminder that our next meeting is on Wednesday 18th June. Raffy Shammay, VK2KRF, will relate his experiences on his recent trip overseas. He will describe problems in working portable in various countries and will demonstrate the use of a digital camera. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 5th of July so come along from 1:30 onwards and have your T-shirt printed with the society's logo and your call sign - or indeed any other digital image that you may have. Raffy will be arranging the equipment and will also have his digital camera if you would like something photographed. The cost should not exceed $5 if you provide your own T-shirt.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before the meeting. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND AMATEUR RADIO CLUB

LAST SATURDAY SAW ANOTHER SUCCESSFUL COMPUTER EXPO, CONDUCTED BY OUR CLUB. MORE THAN 900 FOLK ATTENDED DURING THE DAY AND MOST EXHIBITORS EXPRESSED SATISFACTION WITH THE DAY AND WERE WILLING TO COME AGAIN TO OUR NEXT EXPO IN NOVEMBER.

OUR SIX METRE REPEATER IS FINALLY UP AND RUNNING, IN ITS NEW LOCATION, WORKING OKAY , BUT WITH SOME DESENSING PROBLEMS

OUR INTERNET SITE IS PROVING POPULAR WITH MEMBERS AND A WEB PAGE IS BEING COMPOSED TO PROVIDE INFORMATION ON THE CLUB

MEMBERS ARE REMINDED THAT AN EXAMINATION. FOR THE AMATEUR RADIO CERTIFICATE, IS BEING CONDUCTED, AT THE CLUB ROOMS TODAY, SO. UNLESS INVOLVED. PLEASE STEER CLEAR OF THE ROOM, UNTIL AFTER MID-DAY.

--VK2GJ GRAEME, PUBLICITY OFFICE

HORNSBY & DISTRICT ARC.

The next mid- monthly meeting, is on Tuesday, 10 June 1997. At 8:00 pm. In the Mount Colah Community Centre, Pierce Close, Mount Colah. (Located near the Eastern Entrance to the Railway Station.) This is the Clubs informal get-together, to discuss any technical problems, that have arisen, with our equipment. Visitors are most welcome.

Training classes.
For more information phone, the Education Officer Tony VK2BTL on 9487 3383. or for general information phone John on 9807 2490.

The Club conducts, a net every Monday night, at 8.00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are wellcome. Listeners set your scanner to 147.250. Remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

--Submitted by John W Turner VK2WRT -Publicity Officer

Anarts, The Australian National Amateur Radio Teleprinter Society, is holding its annual World Wide Rtty Contest next weekend June 14th and 15th.
Modes used can be Rtty, Amtor, or Pactor.

Frequency Bands are 10, 15, 20, 40, and 80 metres.

Time span of contest is, 0000 UTC 14th June, to 2400 UTC 15th June, that is from 10 AM EST Saturday 14th, till 10 AM EST Monday 16th. Messages to be exchanged are: RST, TIME UTC, AND CQ ZONE.

A very nice Plaque is awarded to the winner of each section, Single Operator, Multi Operator, and Short Wave Listener.

Certificates are awarded to First, to Fifth places in the World, First to Third places in each Country, or, State, and also to the First to Third in each of Six Continents.

As an added Bonus this year, and in the future, if successful, any station contacting Anarts Society Calisign, VK2SG, can claim double QSO points. If you require a copy of the contest rules, please send a packet message to VK2CTD at VK2WI, or via Emall to Cdavies at dse.com.au.

It will not matter if the rules do not reach you until after the contest, logs will
be accepted up to and including the 30th September 1997.

Last years contest saw a record number of entries, we are hoping for even bigger results this year. The Committee of Anarts would really appreciate it if you could spare the tirne to answer a few calls, especially from Overseas Stations, as they receive Bonus Points for working a VK station. Hope to hear your Callsign during the Contest.

--Submitted by Colin Davies Vk2ctd, President of Anarts.

The next meeting of the Liverpool & District Amateur Radio Club will be held at the Scout Camp on Cambridge Rodd Glenfield on next Wednesday the 11th of June at 7.30 P.M. for a prompt 8,00 P.M. start.

The lecture lest month by Brien VK2TRS giving a practical demonstration on Easytrax was very interesting and well received by the members.

There will be no lecture next wednesdeay night but we will be discussing details of the new repeater, the forthcoming Annual General Meeting, the Club Auction, JOTA and a social night coming up. Bring your friends and visitors will be most welcome and tea, coffee and bickies will be served.

The directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Holsworthy Army Camp) A LADARC sign will be placed near the road side in front of the entrance gate to the Scout Camp.

Hope to see you all there.

ORANGE & DISTRICT AMATEUR RADIO CLUB INC

THE ORANGE CLUB'S MANAGEMENT COMMITTEE, IN A PUSH FOR INCREASED WICEN MEMBERSHIP IN THE CENTRAL WEST REGION, DECIDED AT THEIR RECENT MEETING THAT THE CLUB WILL PAY THE ANNUAL MEMBERSHIP FEE FOR ALL OF THE CLUB'S MEMBERS WHO ARE IN WICEN, AS WELL AS THE ONE-OFF JOINING FEE FOR ANY NOT YET IN WICEN, WHO JOIN.

THIS MEANS A SIGNIFICANT DISCOUNT FOR AMATEURS WHO ARE IN BOTH THE ORANGE CLUB AND WICEN AND IT IS HOPED MANY OF THE CLUB'S PRESENT MEMBERS WHO HAVE DROPPED OUT OR WHO HAVE NEVER YET BEEN IN WICEN, WILL TAKE ADVANTAGE OF THIS GENEROUS INCENTIVE OFFER TO JOIN.

OF COURSE. IT IS ALSO HOPED SOME OF THE WELL-KNOWN LOCAL OPERATORS WHO ARE NOT IN EITHER ORGANISATION MAY RE INSPIRED TO JOIN BOTH TOO. THERE ARE NO STRINGS, WE SIMPLY NEED MORE AMATEURS IN WICEN AND THE CLUB!

FOR MORE DETAILS IF YOU ARE INTERESTED, CONTACT THE ORANGE CLUB SECRETARY PETER VK2ETK ON HIS TELEPHONE NUMBER 063 81 3439, 9AM TO 9PM DAILY OR AT CLUB MEETINGS.

--FROM PETER VK2ETK HIMSEL

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

Upcoming lectures include:

June 17: The Mobile Phone Network by Chris VK2ZCJ
July 15: High Speed Packet

>>on 'the best' program to do this.
>
>I would suggest Super Morse, it worked for me. It uses the Farnsworth
>method which lets you learn the letters at a high speed (20wpm) but puts
>the words together at what ever speed you want(5 or 13 wpm).

I've also written a Morse code trainer which has gotten me to 13 wpm from 0 in about a month of practicing half an hour a day. It has many of the features of Super Morse (which I agree is quite good) but is freeware. I've uploaded it to Simtel for inclusion in their hamradio directory but it hasn't appeared there yet. If anyone wants it, let me know and I can email it as a MIME attachment (or binhex or uuencode if you prefer).
Here is the announcement that went with it to Simtel:

http://www.coast.net/SimTel/msdos/ham.html
mct12.zip Full-featured freeware Morse code trainer, 5 training modes
26516 bytes

MC is a freeware Morse code trainer. It features:

o 5 modes for learning code:
1) sends 100 random characters, you copy them to paper.
2) sends characters, you type each one as you hear it. A character is eliminated
after you get it right three times, leaving the ones on which you need more work.
3) you enter characters, computer sounds them out.
4) sends random words, you copy them to paper.
5) computer sends a text file of your choice, you copy it to paper.

o Adjustable tone and sending speed. Intra- and inter-character speeds can be set
separately, with effective combined speed displayed.

o Novice code users start with just A and B and add more as they learn. Those who
already know code but want to improve their speed can start with the full set of
characters covered on the amateur radio code tests.

4987. FISTS

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-06 00:00:00 UTC
From: ny2v_fred@juno.COM
Message-ID: <19970606.072329.4511.6.ny2v_fred@juno.com>
Source record: 196365

This is only an informal message from a FISTS member.
Fred Adsit, NY2V. 1997-06-06.

First off, I had nothing to do with the choice of the word FISTS to describe the operating club of the International Morse Preservation Society. Evidently, the founder, George Longden, G3ZQS, thought FISTS was perhaps a better choice than IMPS. I have no idea -- I was a late joiner, discovering it about three years ago. The society was founded in 1987 and found over 300 members in a hurry.

Here, greatly abbreviated, is the recent trend of FISTS membership.

Date Active NA members G3ZQS's roster Total nr FISTS

1987 - 1988
> 300
July 1, 1993 139 636
775
July 1, 1994 259 664
923
June 1, 1995 373 633 1006
June 15, 1996 700 700
1400
June 1, 1997 1774 c 821 c 2595

Members are now coming in at a rate of about a hundred a month. Although FISTS was founded in England, the growth is obviously in North America, and close to 99% of that is in the US.

The FISTS CW Club has a large volunteer base which handles its daily affairs such as nets, pairing up code buddies, etc. It is not a registered PAC or anything of the sort. It publishes a combined overseas-edited and US-edited bulletin every month called the KeyNote, a costly task. Whenever a new sheet is filled, photos of members are published in Keynote on glossy film paper, with a current index. Many evidently feel their photo is as bad as the one on their state drivers license, and have not sent in a mug shot. I sent mine in anyway. KeyNote is not a photo album, it is a very good newsletter -- but it's fun to see what other members look like.

A couple of years ago, a small group of FISTS members prepared a Declaration, which the NA representative printed in KeyNote. A vote was taken on it, and 95% of its then-smaller membership approved. This carefully-written document, the first of its kind from a grass-roots ham organization, was given wide distribution, since it did indeed represent the position of FISTS on the issue of licensing

integrity in the US. I personally - and I am just a member - decided to publish it so you could all see it, after first publishing, here, the original, basic, ongoing purposes of FISTS: operating & Elmering.

Mr. Winkler wanted Mr. Maia and Ms. Kott to debate the code testing issue, first on SW radio, and subsequently at Dayton in 1997. Ms. Kott - with much support from FISTS members calling on the open phone lines - presented the FISTS position very well, especially since she is not the kind of person who wastes time forcing her opinions on people, not on r.r.a.p., not on the air, not even in KeyNote, of which she is a very busy & competent editor. Other tasks she used to cope with alone has been farmed out to a number of member volunteers. FISTS has, from its beginning as the club of the International Morse Preservation Society, gained membership almost entirely by members explaining the group to non-members, who in turn decide either to join, or not to join. On packet, for example, you will find no messages from Ms. Kott inviting you to join FISTS. You WILL find such messages, posted, however, by enthusiastic members of the FISTS CW Club. We have had dropouts, which is to be expected. I too have joined ham societies, found them not my cup of tea, and that was that. Not so with FISTS. I plan to stay with this lively group.

I must tell you, I find FISTS, its on-air activities, and the KeyNote, about as much fun as any club or ham society to which I belong. The three ham journals I most look forward to receiving in the mail are FISTS's KeyNote, QRP ARCI's Quarterly, and WorldRadio. Re the latter, I have spent endless hours trying to figure out who Kurt N. Sterba is. He claims I have failed, and I trust he is correct. He certainly knows a lot about antenna systems.... but I digress..

I stated in an earlier post that FISTS was one-third the size of the QCWA, and subsequent research points up, per the chart at the beginning, that as far as counting up callsigns was concerned, I was having a really bad day. Surely nobody will recommend me to help certify such things as their contest scores. Blocks of numbers have been assigned to the NA group for use, and similarly for overseas. My apologies for earlier deceiving you.

I now await comment about how tiny FISTS is. True. It is a small, but as you can see, growing, group. The real test is the activity of its membership. Virtually every FISTS member, and this is also the case with QRP ARCI, is very active. All ham radio societies should be so lucky. The two organizations I have chosen to mention definitely defy the notion that one percent (or pick your own minute percentage) "do all the work". Were that the case, you would not find broadcasters and publishers seeking FISTS leadership to represent the pro-code-test side of the issue debated in here on r.r.a.p.

Regards --- Fred Adsit --- NY2V ---FISTS nr. 1293

Science may have found a cure for most evils;
but it has found no remedy for the worst of them
all --- the apathy of human beings. ---- Helen Keller

This message represents the views of its author &
not necessarily those of the organizations mentioned.
==========

>I'm still waiting for mine, too.

Probably the best thing to do is just offer every ham in the world an automatic membership, forgo the formality and expense of membership applications, maybe even have do-it-yourself membership cards, and then you can claim to truly represent all amateurs. Think of the power of that!

Date: 1997-06-06 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bc72b0$31d53c40$41070ccf@kh7m>
Source record: 196370

How about these CW guys??

To qualify requires 30 minutes, solid copy at 60 WPM!?
Info and membership list at http://www.dutch.nl/wilbwk/ehsc.htm
At the web site, click on the Bencher paddle to hear what
60 wpm sounds like.

THE EXTREMELY HIGH SPEED CLUB

founded march 20th 1982

General Information

The Radio Telegraphy Extremely High Speed Club was founded on the 20th of march 1982 in association with the HSC and VHSC and was created for every amateur who enjoys high speed telegraphy to provide a stimulating challenge to achieve their highest operating speeds. Active members strive for an optimum discipline in radio telegraphy traffic and also encourage and help other amateurs to use high speed telegraphy to increase their speed.

The club consists of honorary members, active members and short-wave listeners who have all the same rights. The club is open to membership from all countries and language groups.

How to join the EHSC

To become an active member of the EHSC two recommendations must be obtained from other active members. An active member may give a recommendation after a "sponsor QSO" under the following conditions: A recommendation can be made after having a 2-way CW contact with a EHSC member for at least 30 minutes using a telegraphy speed of 300 letters per minute or higher (Paris-base, 60 WPM).

Solid copy must be made by the applicant
together with excellent keying. Computers, keyboards or decoders are NOT allowed during these contacts. Reception must be done by ear and only a basic electronic keyer may be used to assist with sending.

After having 2 recommendations in your possession you can send your application together with 10 IRC's (or equivalent) and a written and signed statement that the applicant did not used any computers, keyboards or decoders during the sponsor QSO's. There is no further payment for life membership. Applications should be addressed to the president of the EHSC:

Source record: 196374

For those who need an update, quote is below....

First of all, let's remove the snobbery. Not fight over
who's a better ham: Coder vs other mode. What is the goal
here anyway. What is a ham operator, what can he/she do with
the license?

Young, new hams:Usually not rich; hope to maybe get a nice rig
someday. Probably build a rig with help. -- go for the
code, because that first rig is probably a simple CW rig.

Older, new hams:cool phone, buy an appliance and it stops there.
Code requirement quite a nuisance. Want something to plug
in the 4 wheeler without monthly service fees, etc.

How many of you are going to work a young ham on ssb? What
drive is there in the pool of young, new hams to communicate.

Having a unique, different way, such as morse code, is intrigueing
and novel enough (And proven) way of uniting amateurs ---
a common operating platform. The goal of improving code speed
etc., is a driving force. Not to mention operating skill and
development of filters, zerobeating, upper/lower rit/xit
understanding of different rigs. Such competence is evident
in operating skill. What self-esteem is built knowing you
can talk and push a PTT microphone to communicate?

What drive is there for voice modes. And what about the
cost of digital modes? I dont see new, young hams buying
thousands of dollars worth of equipment for these modes.
Especially during their early years.

Why are people complaining about learning such an outdated
mode? Is it too hard to learn the old stuff? And if elimin-
ated, what common bond will exist, and what motivation will
there be for new hams? Isn't experimentation AND communication
the driving force? I guess their first rig will be a 2M HT.

Simple fox xmtrs will no longer exist. VOX only. VOX auto-
sequenced circuits harder to build -- so they die away.
Voice tag DF in cars disappears, the DF tools got thrown out
because no-one used them regularly. Commercial rigs sold
without a CW keying mode...

Years later -- "Its too hard to be a ham -- You gotta know
all that digital timing stuff on the test."

More moaning... hams disappear... and universal
alarm company goes QRO on previously allocated ham freqs.

Soon everyone's got a piece of ham gear, with $300 a year
activation fee and unlimited use for $50/month. Called
Cellular-H. You get a callsign for ID purposes.

Gone are the contests, awards, experimentation.

Because 90% of the Hams don't know what you're talking about.

"Old Fred used to know, but he passed away last week."

And so did ham radio.

>>bucks for QST, and then have to pay EXTRA if we want to get QEX, where
>>all the new stuff gets explained? Put that stuff in the magazine, and
>>let the DXers pay extra to get all their garbage.

There are an awful lot of DXers and contesters in the ARRL too, people
who are bored to tears by yet another article about battery chargers
for HTs or neat things to do with APRS. Not to mention technophobes
who are bored to tears by anything more technical than a crystal set.
And technophiles bored to tears by anything less technical than a
CPU-controlled synthesized transceiver.

Point being, the editors of QST ride a fine line. Just about anything
they do (or don't do!) is going to offend or bore someone.

They also answer to the ARRL Board, which in turn answers to the
membership. Which means if you aren't a member, you have no say.
With the popularity of the Tech license these days, if more Techs
would join ARRL I think you might just see some more changes in the
magazine..

>As I recall his HT was confiscated by the local police
>and the FCC was never involved. He was charged
>I think of violating a state law, not federal law.

I think similar incidents have occurred more than once.

However, there are other stories that you never hear. A friend of mine was hunting in the mountains of Central Idaho when he came upon a hunting party who had a missing member. The missing hunter was an elderly gentleman and it was near dark, so there was an incipient emergency. My friend could access a repeater that covered the Boise area, and contacted another friend of mine who called the Sheriff of the county where the hunter was lost. This involved a lot of radio and telephone relaying, and, as you can imagine, was pretty slow and inefficient.

When the sheriff discovered that my friend had a radio that could be programmed onto public safety channels, he relayed the frequency and PL tone of the local sheriff's repeater, and the subsequent traffic was handled directly and swiftly.

So in at least some cases, the ability of ham radio to be used out of band in emergencies has a more satisfactory outcome. Yes, the hunter was found later that night, safe and sound.

>Actually, Jerry, you never thought of it at all. A perusal of Deja Vu will show
>that Squggy introduced the term 'beeper' in this forum. And I can assure
>you that if Squiggy introducted it, the intention was indeed to be derogatory.

Actually Jim with all due respect you haven't a clue what I have or have not thought about, not any more than you know Carl's motives in using that term. Sorry Jim smart as you might be you can't know another's thoughts or intentions. I don't find the term derogatory and guess what, I'm entitled to an opinion.

>
>You should not CONSIDER the tones generated by CW operations. You should
>turn on a radio and LISTEN to them. Morse code, as heard on an HF receiver,
>doesn't 'beep'. It goes DIT and it goes DAH, and sometimes it goes CHIRP,
>but it never goes BEEP. Your ARRL code tape at five words a minute may,
>however, go 'beep'.

Well Jim I CONSIDERED the tones generated by CW after listening to them quite extensively. I don't generally use a very narrow filter so the tones I hear on the air are much more beepish than DIT or CHIRPish. I can't speak to the ARRL code tapes as I do not own any.

>
>I'm sure you would find it unoffensive, it wasn't directed at you. If
, in
>fact, 'beep' was the correct word to describe the sound of Morse code
on an HF
>radio (which it isn't), and if, in fact, the term 'beeper' was
'descriptive of
>the avocation' (which it isn't) then unless you or your friend Squiggy
are

Now here are a couple of interesting Jimisms. First you say Carl is my friend, what evidence do we have for that statement? I simply disagreed with MD that the term "beeper" was derogatory. Then you refuse to refer to Carl by his name instead using a nickname that could itself be considered derogatory. If you want to falt Carl and/or others for using terms you find insulting you might clean up your own posts.

>communicating on HF, using Morse code, with the posters in this forum
to whom
>you refer as 'beepers' (and I'm sure you aren't), the use of the term
can be
>construed only as derogatory because you have no idea who 'beeps' and
who
>doesn't.

This is an interesting statement. Am I to assume you think I do not use CW, and if so what evidence do you have to support this hypothesis? Rule one, my opinion on continued fast code testing is not relevent to my choice of operating modes. A hint I have passed the 13 WPM exam currently in place and I do weak signal rovering. Perhaps I beep and don't find the term derogatory, you really have no idea. As you put it so well "you have no idea who 'beeps' and who doesn't."

>
>Using your logic, can I assume that since most no code techs are no
code techs
>because they can't copy Morse code, that most no code techs are
operating on
>VHF, that most hams are good people, that most hams are buddies with
other
>hams, and that all human beings have an rectum, that is OK to call a
no code
>tech a "VHF Good Buddy Asshole Than Can't go Beep" and no one will be
offended
>by it ? I kind of doubt it. Even if your assumption that 'insult is
in the eye
>of the beholder' is true, I can't imagine too many no code techs who
wouldn't be
>
>offended if someone called them a 'VHF Good Buddy Asshole That Can't
go Beep',
>can you ?

This is a long boring trip to nowhere. If you can't understand the difference between being called a 'beeper' and being called an 'Asshole' I suggest you undertake the following experiment. Go to a local Guamanian watering hole. Select a large Samoan or other outsized human, preferably a bit drunk. First refer to him as a beeper wait 5 minutes, then refer to him as an 'Asshole', report the results. The results will be more valid is the subject speaks the language you employ for the test.

>
>So what do you think, Jerry ? Maybe we should conduct a poll of the no code
>techs here and the people who use Morse code and see what they think ?
>After all, being offensive is why most people are here, right ?

My suggested test above should provide the insight we need to answer this question bur after you report your results we could conduct the poll.

>
>73, Jim KH2D
>

I have old SB 102 in need of a general tune-up and some minor repair.
Does anone know if Heathkit still services their old gear or if
there are any Heathkit technicians proficient in returning gear
to factory specs.

Also does Heath sell face plates, knobs, and rubber parts (eg.feet,
internal bands)

Thank you in advance. 73

(snicker, snicker)

YES!! I think I've got it now! The costs only just keep building up as soon as you really do something - so best to stay out of that whole nasty business entirely. It should suffice to just try to make everyone believe you're actually doing something, and leave it at that! The same principle should apply in business, politics, and religion too. I wonder why nobody has ever thought of this before?

Can anyone help please.
My Alinco DJ-S1 was modified a long time ago to recieve air-band.
Yesterday I managed to reset the unit and lost all the memories. Can
anyone tell me how to tune in the air-bands again?

Thanks,
George Harrison
County Kildare,
Ireland.

>
> Tom - N8ECW

Baloney ... I'm just tired of having the folks in Oldington use MY money
against my interests by paying the freight for lobbying *against* things
like modernization of SS rules, elimination of outdated code tests, etc.
If they are using the money in ways that appear to be counter to the
interests of the huge majority of hams who are NOT ARRL members.
that's even worse ...

And I see the FISTS organization as small, radical group dedicated
to keeping ham radio in the Morse ages forever ... that's dangerous
and I think their finances and political activies should be subject to
some oversight ...

What's wrong with suggesting that some oversight of their political
activites might be in order??? What do they have to hide from their
dues-paying members (or the non-member majority of hams, for that
matter???)

It's really interesting how, the minute someone says something negative
about the ARRL/FISTS, a bevy of appologists come out of the woodwork
to attack the ARRL/FISTS critic ... if they've nothing to hide, why the
fuss???

He's a communications lawyer who represents the BOD's
position to the FCC as if he/they were the voice of all hams.
That's a "lobbiest" no matter how you look at it IMHO ...
that he happens to file some papers in addition to being a
"good old boy" does not detract from the lobbying function.

Note that I am not suggesting in any way that Mr. Imlay
has done anything improper ... he is free to pursue the
making of a buck by peddling his services ...

> ARRL has nothing that resembles a PAC, walks like a
> PAC, or talks like a PAC. PACs are set up to "financially
> assist" favored politicians or causes. ARRL does not
> participate in such assistance. Maybe you were thinking
> of the NRA goons.

I don't believe that to be viewed as a "PAC" one has to
necessarily contribute to the campaign funds of politicians ...
though that is usually considered a productive tactic ...
I view the ARRL BOD as a "political action committee" ...
they decide what their policy is going to be (without much
regard for the fact that they and their members are a small
minority of US hams) and then spend money and try to
wield influence to see that that policy is incorporated into
the FCC's rules ...

Not at all. The no-code license does a great job of GETTING THEM INTO the hobby. But once they're there, they soon grow disinterested with the useless drivel they hear on the bands. Radio cops, repeater dictators, YE OLDE FAHRTZ trying to shove Morse down their throats, in-depth reports about Joe's colostomy bags and Bill's prostate surgery, etc. Such was the case with myself and I'd imagine several others as well.

How many good operators, representing the next generation of amateur radio, have been attracted to the hobby in recent years...only to quickly lose interest and sell their equipment once they get a first-hand listen at the large numbers of social misfits and ancient fossils who, unfortunately, make up a large majority of the amateur community?

No. the people are just looking for someone to blame on.
I became one of the targets.
I already told the people to look up Industry Canada's call sign
database if they were really in doubt. It makes clear that I am a
legal amateur. However, they just don't listen.
They keep blaming me on the newsgroups, especially in the scanner
newsgroups. (I am following up to amateur newsgroups since I posted
the original into the amateur newsgroups)
I have no idea why you have to have a license (I do though) to post
the articles into the newsgroups.
I will ignore the posts so they won't have fun (?) from blaming me.
I am sure they will look for someone else. Watch out... "you" may be
the next one.

If Comrade Clinton makes a public threat, I take it very seriously. That's
because as President he has the power to carry it out. When the chief
of the PRB spoke, what he said should have been taken seriously, because
he had the power to carry it out. How naive are *you* anyway? (Apparently
very.)

Sadly true. If the ARRL did have a PAC, like the NRA-ILA, they would
be much more effective in influencing public policy with regard to amateur
radio.

>Like all corporations, ARRL is audited yearly for tax purposes
>(yes, ARRL pays taxes) by an independent outside auditor, and
>the results are published in an annual report. Contact your
>director or HQ to learn how to obtain a copy.

While corporate taxes are often considered taxes on corporations,
functionally they are not. Any corporation merely acts as a tax *collector*
for the government. The taxes are actually paid by the corporation's
customers, IE it is built into the cost of goods sold to the customer.

This is a widely misunderstood fact. People who call for "soak the fat
corporations" taxes are really calling for more taxes on the *customers*
of the corporation, and those are likely to be individuals of modest means.

Sadly, that's mostly true, though there are some who are pushing the use
of modern modulations and codings to extend the ability to correctly detect
signals near the Shannon limit. They are in the minority, however, because
they don't fit the idea of "sport" which drives the average EME operator, IE
the same thing which causes most Dxers to still use OOK Morse instead of
better modulations and codings for their games. Use of superior techniques
would be like shooting fish in a barrel, and there's little "sport" in that. EME
operators are still pushing the raw RF limits, however, with developments
like HEMT preamps and highly optimized antenna arrays. That's not in the
same league with Sam's invention, but it isn't a trivial contribution either.

>parades, races, charity events, etc.

What you say about public service is true, but one can't experiment with
wideband techniques without access to wide spectral segments. One
cannot do weak signal work when clobbered by other users of shared
spectrum, etc. Mere occupancy of spectrum is no guarantee of retention.
The FCC is required by the Communications Act to allocate spectrum
on the basis of best serving the public interest. Incumbency is secondary
to that.

It is true that CB is the primary example of the power of incumbency. The
FCC realizes that there is no practical way to reallocate that spectrum.
But that's not so much a matter of occupancy as it is a realization that
the incumbents *wouldn't leave* if the spectrum were reallocated. Hams
OTOH have a long history of vacating spectrum which has been reallocated
to another service. So incumbency carries little weight in amateur allocations.

>his HT? Did the FCC confiscate it? I suppose if it were a fender bender
>and he had access to local ham repeaters it would have been in
>appropriate.
>--

Here's what I recall of this incident.

It took place several years ago.
The ham had an HT and was injured or lost while
hiking in California somewhere. He used his HT
but couldn't raise any ham repeaters and then went
to a police frequency and was rescued.
As I recall his HT was confiscated by the local police
and the FCC was never involved. He was charged
I think of violating a state law, not federal law.

Again, this is based on recollection, so don't
hold me to the details. Anyone else with more
specifics feel free to elaborate or correct anything
I've said.

I saw what you said, Carl, and I saw how you said it, and what you
added to it. I've also seen the constant name-calling you've indulged
yourself in with me and with others. It's all available in the
archives for anyone interested.

For you to whine about namecalling is the height of hypocrisy. If you
can't stand the heat, get out of the kitchen. Or clean up your own
act before you start sniveling at the actions of others.

Physician, heal thyself.

Duh, you can't figure it out. Maybe it has something to do with the fact that
QRZ doesn't get info on foreign (non U.S) calls every nite from the FCC ?

Consider yourself fortunate. It happens in most, but not all parts of the
country.

>I think the detractors are a classic case of (I really would like to be
>in Ham radio too, but I can't afford it, and/or can't pass the test)

Here we go again with the incorrect HAMBO assumption that anyone who dare
criticize their prestigious hobby has just got to be an unlicensed,
unwashed CB'er. I am a licensed ham, including your all-important Morse
code endorsement. Man, y'all just HATE the fact that one of your own
would take to the Internet and publicly disagree with the status-quo,
don't you?

>they use a few isolated incidents of Ham troublemakers and/or unsavory
>activity on the Ham bands and blow it completely out of proportion. I
>guarantee you there is a bad apple or two in every barrel, but the Ham
>bands I know (10-75 meters) are not a problem.

75 meters is "not a problem?" I don't suppose you've ever heard Big Al's
8,000 watt "jam sessions" on 3894.5, huh? And you've never run across
"The Walter Barstool Show" on 3853? Certainly, you've never experienced
the constant jamming, malicious interference, profanity, personal threats,
music, and other assorted chaos on these frequencies plus 3901, 3950,
3898, etc. Sounds like more than "a bad apple or two" to me. Let's
see...there's the above-mentioned players plus "Dumba** Donnie", "Dipsh*t
Dan", "Ralph the Thief", "Pork Butt", etc. And guess what? These guys
are all Generals or higher. Many of them Extra Class. The Elite of
Amateur Radio for all the world to hear!

5037. Summary of Hawaii Hurricane Exercise

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-07 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <5ncarf$37j@news.Hawaii.Edu>
Source record: 196198

Here is a brief overview of the Oahu participation in the recent hurricane exercise. Please feel free to send this to others, if you wish.
Bev

Statewide Hurricane Exercise, Makani Pahili '97:
Oahu Amateur Radio Participation
by Bev Yuen
The annual statewide disaster drill was held this year during the first week of May. This exercise runs over several days, simulating preparations made during the approach of a hurricane and the hurricane's immediate aftermath. This year, as in previous years, the exercise involved diverse agencies throughout the islands, including Civil Defense, State and City governments, private and non-profit agencies and the military. It's purpose is to update and practice disaster plans and make changes where necessary to improve each group's response if an actual disaster occurs. Some of these agencies used tabletop exercises, while others conducted hands-on practice. Each year, amateur radio operators across the state participate in this exercise.

Amateur radio operators on Oahu participated in actual drills conducted by Oahu and State RACES, the amateur radio operators associated with the Oahu healthcare agencies and SKYWARN. Amateurs coordinated with the Healthcare Association of Hawaii's Mass Casualty Exercise across the state and with the National Weather Service for SKYWARN operations. At least 40 amateur radio operators were actively participating on Oahu alone. The commitment of these volunteers to amateur radio and emergency communications is evident as many took vacation from their jobs or changed their schedules to be part of the exercise held on weekdays when most would be working.

Beginning Sunday, May 4th, about 72 hours before the hurricane's expected impact, Oahu RACES conducted extra nets at 7:30 am, noon and gave updates on the evening nets as they would do during the approach of an actual hurricane. These nets were used to give updates on exercise participation, but in an actual hurricane approach, would be used to check availability of operators and to position hams in key locations prior to the expected impact.

SKYWARN conducted their drill on Tuesday afternoon, May 6th from the National Weather Service offices at UH in Manoa valley. The simulated hurricane-related messages soon became actual messages as a severe rain storm swept over Oahu that afternoon. This, combined with equipment problems, created a more challenging afternoon than anticipated.

On Wednesday morning, May 7th, Oahu radio operators, along with others all across the state, participated in the portion of the exercise simulating the aftermath of the hurricane. Oahu amateur radio operators manned stations at Oahu Civil Defense, State Civil Defense, 6 Oahu healthcare agencies, the Waikiki Hotels Emergency Operating Center, First Hawaiian Bank and Ko Olina

resort. As well, there were individuals operating as Net Control Stations and relay stations outside these institutions and others simulating positions such as a Civil Defense District EOC, a public evacuation shelter and individuals sending messages. For this exercise, they used voice communication only, no packet radio operations. Operations were on VHF and HF frequencies.

Six Oahu healthcare agencies now have an amateur radio station permanently located in their facility and each had their station in operation for this exercise. They included: The Queen's Medical Center, St. Francis (Liliha) Medical Center, Kuakini Medical Center, Kaiser Medical Center, Kapiolani Medical Center and the Blood Bank of Hawaii. They participated as part of the Healthcare Association of Hawaii's Mass Casualty Exercise. They passed messages that were given to them by their hospital's emergency operating center or originated with the healthcare association's exercise coordinator located at OCDA. They operated their own VHF net, using the repeater at St. Francis Medical Center (145.49 MHz), with NCS located on the 28th floor of the First Hawaiian Center Building in downtown Honolulu. For message passing, stations were sent to simplex frequencies. During part of the exercise, the repeater was turned off to simulate what would be the operating conditions in a real emergency. Net operations continued, almost without interruption, under control of their NCS, on their alternate, simplex net frequency. Several long-time hams have commented that this was the best-run practice net they have heard on Oahu in 20 years.

State RACES, located at Diamond Head was NCS for a statewide HF net used by the healthcare agencies, among others. On Oahu, The Queen's Medical Center, the healthcare relay station in Salt Lake (WH2E) and OCDA were communicating on HF. Neighbor island HF stations included hospitals on the Big Island (Honokaa, Hilo Medical Center), Maui (Kaiser Clinic and Kula Hospital), Kauai (Mahelona Hospital). Individual operators checked into the HF net from each island.

Oahu RACES, operating from OCDA, was net control for their net (146.88 MHz) to pass traffic related to OCDA activities. They used this exercise to train several of the newer operators by pairing them with more experienced message handlers. They set up several portable stations within OCDA to have more flexibility (one for HF, and 2 VHF stations, one of them to monitor the healthcare net).

For this exercise, several other agencies participated in the nets including the Waikiki hotels Emergency Operating Center and First Hawaiian Bank. Neighbor Islands had operators at agencies, such as Kauai Civil Defense while others operated as individuals with traffic. As well, many others were monitoring and checked into nets during the morning.

The group operating from OCDA and the 'hospital hams' have each held an evening critique session to assess how they did, share their ideas and experiences and identify weak areas. Each group identified two or three priority areas to focus on during the upcoming year. The Oahu hospital group priorities were a) developing more operators and b) incorporating packet radio communications technology into the standard operations. The

RACES group at OCDA will focus on training and obtaining equipment and supplies to make their system more flexible and more organized for the high volume of traffic which can be expected at OCDA.

We all hope that a large-scale emergency will never materialize. However, each exercise raises the readiness level of each participant by giving us the opportunity to test equipment, skills, procedures and teamwork and uncovers where we need to improve. Thanks to all of the operators, both on Oahu and across the state, who took the time and made the commitment to participate in the exercise.

Is there a mod to enable cellular reception on the Yaesu FT-3000? Any info will be greatly appreciated.

Our friend Eric seems to have a real problem with making accusations against people which are totally unfounded. When asked to provide proof to back up his potentially libelous statements, he stammers and stutters. He then launches into some totally flawed logic as to how he arrived at that conclusion. He's "always right", because of course, HE'S smart enough to figure these things out.

Case in point: a few weeks ago, he was insisting that a couple of respondents on this forum were actually the same person, using different ailiases. Reason? Because they were both AOL users. When pressed further, bright boy Eric offered the explanation that he had traced the paths of the messages and they were all the same. Even after several individuals explained to him that ALL posts from AOL have the same path because they ALL originate from a common master server, Eric still insisted that he was right and these terrible, awful AOL users were ganging up on him!

>contesting or just plain daily or frequent communications...as
>long as proper procedures are used.

Those who are on the air daily participating in contests and chasing DX time and time again turn out to be the very best operators when it comes to message handling during disasters. Their communication skills are as sharp as a razor, and their stations are the most efficient you'll find anywhere.

Some will complain that S97.1 makes no mention of contesting and DXing, and that these activities do not further the goals of the ARS, but such complainers (Burt, Carl and Gary immediately come to mind) are nearsighted - they don't realize that these activities provide the perfect training on a daily basis to meet all or part of the purposes set forth in S97.1(a), (b)* and (d).

(And as an added bonus, the FCC has recognized the value DXers have provided towards international goodwill over the decades by awarding us with S97.1(e).)

Jeff KH2PZ / KH7

* "Radio art" as mentioned in S97.1(b) does not only include the design and construction of a radio, but also the operation of such, too. And what better way to expose the design weaknesses of a radio than to test it on the air during a contest? Many of the SOTA radios some of you have paid kilobucks for are not. They're junk when placed under the pressure of a serious contest operator, and thus will be junk when pressed into service during a disaster when the quickness of handling message traffic approaches that of contest-type operating.

OK, that's a valid point. Still, it would be no easy task to vacate a
popular band, particularly on 20 meters, where DFing would not be all
that simple.

Right on, Glen. That's the point I've been trying to make. I consider serving (or providing a service) as one of my hobbies. There is absolutely no contradiction is us considering a service as a hobby.

Since these guys are so hung up on the word "service" one wonders why they continue to use the phrase "ham radio" - just as "hobby" is not mentioned in Part 97, neither is "ham radio."

^^^^^^^^^

Horse poop. "Technical" is only mentioned once - it's in S97.1(c). And in
that paragraph, "communication" and "technical" phases carry equal weight.

S97.1(d) mentions "technicians" and "electronics experts" but it also
mentions "trained operators". As far as I can tell no one portion of
S97.1 is even devoted entirely to "technical":

(a) speaks of us providing voluntary noncom comm service and of us
providing emergency comms,

(b) speaks of us advancing the radio art (which includes technical
and operating),

(c) speaks of rules providing for the advancement of communication and
technical skills; seems that "rules" is the key word. Note that communi-
cations skills are mentioned prior to technical skills!

(d) speaks of trained ops, technicians, and electronics experts. Again
note that "tranined operators" is given priority in the order written.
Note also the distinction between "technicians" and "electronics experts."
Seems the FCC wants to partition us into these three areas of interest.
"Electronics experts" comprises only 1/3 of that total, a minority.

(e) provides the pat on the back to DXers for a job well done over the
decades.

I think your septic tank must be leaking into your fresh water supply,
Carl. You continue to be full of poop.

>
> Gary

Oh, I'm quite naive, yes, but hardly naive enough to believe any
politician's justification for his actions. Some FCC official blames
some ARRL actions as an excuse for grabbing a nice chunk of 220. You
don't think he's going to stand there and tell you the REAL reasons, do
you? Like, for instance, a lot of UPS money changing hands, so that
pressure is brought to bear on the FCC to violate their own procedures in
the spectrum grab?

I think it's you who are naive. You probably believe Clinton never
inhaled, right? You probably think that Clarence Thomas was the most
qualified judge in the land and that his color had nothing to do with his

nomination to the Supremes, as Bush told us with a straight face, right?

Of course you don't. And I don't necessarily believe nth-hand reports of what some secondary bureaucrat says about his agencies motivations, either.

Plain English when on voice? Then why are you using the CW prosign "CQ"?
According to the ITU, the voice equivalent of CQ is "Hello all stations."
If you're serious about plain English when on voice let me know next
time you're on HF - I'd like to hear you be the first ham in history
to make the general call while on voice and not use "CQ."

You might become famous and start a trend.

I am sorry to say the arguments and posting on this news group are getting more stupid than some of the trash in our HF bands.

I thought this was rec.radio.amateur.misc. it looks more like rec.radio.trash everyday, lets knock off the arguments, this is a good place for info exchange between hams and yes CBers too, most of you hams got your start on 11 meters and got into ham becuase 11 meters started to sound like this news group!

Let clean it up and get constructive again!

Hi,

Thanks for reading this. I bought an old Heath IB1101 freq counter at
a Hamfest and need a manual for it. I would be happy to pay copying
and mailing costs if you can help me out.

Please respond via Email.
]
Thanks in advance,

Bob

Eric: I just love it when someone like you decides to speak for the
entire human race. How do you know what gives me a bad impression of the
ham community? I'll tell you what gives me that bad impression, the ARRL
requirement to stick with the code requirement after ALL governments and
military operations have decided to cease using it because of it's
inefficency. Drag your antiquated requirements into the 21st century
Eric and watch the number of "legal" hams drop lower.

Each well organized office has its trash bin, and actually
rec.radio.amateur.misc is the trash can of the rec.radio.amateur group of
newsgroups. Thank god for that, else the other groups were hard to stand.

5063. This Week in Amateur Radio #219 (for air through 6/13/97)

Newsgroup: rec.radio.amateur.misc

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #219 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 12-Jun:
-
1. Amateurs Provide Communication in Wake of Texas Tornadoes
2. RS-10/11 Falls Silent, Beacons Gone, No Official Word on Cause
3. Phase 3D Launch Vehicle Shipped, RUDAK Team Makes Progress
4. Cabot Commemorative Contact in Canada to Carry the Queen
5. FCC Issues More Gate 2 Vanity Calls, 2/3 Filed Electronically
6. Mike Foale, KB5UAC, Asks for Help on Packet from Mir
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. "The RAIN Dial-up" from Chicago
10. Special Event Station Calendar
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net. Presentation of "The RAIN Dial-up" has been made
possible by a grant from Mike Reed, N7ZEF, of Sinclair, Wyoming.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz.
-
```

Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

VERY SOUND ADVICE.....make very sure of yourself..

DON KB5FHX

5067. WinTone 2.0 - DTMF, CTCSS, CCIR decoder and scanner monitor!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-07 00:00:00 UTC
From: Richard Smerker <rsmerker@steaksandwich.com>
Message-ID: <339A4023.1AF@steaksandwich.com>
Source record: 196228
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur

```
WinTone 2.0 - Tone Decoder/Scanner monitor for Windows 95/NT.
-------------------------------------------------------------

Now available! Decode virtually any tones by using your sound
card and scanner! Here are just a few of the features :

* CTCSS and other Tone Squelch Support

* DTMF, CCIR, ZVEI, EEA, EIA, NATEL and more! It can detect almost
anything!

* Scanner Monitoring - Wintone will record sound to a WAV file for
listening at a later date. It ONLY records when the transmission
is active, meaning you get only the good stuff!

* Plug-In DLL Support for multiple tone formats. And if you want to be
able to detect a new standard or set of tones - We can simply
make a new DLL, and you are ready to go.

* FASTER! Using all the same settings for sample rates as 1.51
(11,025) the program is twice as fast (much less of a CPU Hog).
If you drop to 8000 Samples/Sec, it gets even better!

* Macros - You can now define substitution macros for the detected
tones.
For example, you can define 12345 as "Police Car #1" and 67890 as
"Police
car #2" and if a session detects "1234567890" it will be converted to
(Police car #1) (Police Car #2). Great for CCIR and ZVEI - And even
DTMF if you happen to be using DTMF Paging.

* Triggers - You can assign events to detected tones, allowing you to
respond to tones by Launching programs, recording sound, etc.

This is just the tip of teh iceburg. If you are familiar with the 1.5x
series of Wintone, you will be love the improvements!

Check out our website at : http://www.steaksandwich.com for mor info!

>Jeff ... most interesting ... especially the part where ONLY voice operation
>was used for the exercise ... NO CW ... most interesting and informative.
>(not at all surprising, but illustrative of modern EMS operations ... NO CW)

Once again, the Carl "I'm so biased against CW I have no life" Stevenson
"fact generation" train starts to chug out of the station...

Since the vast majority of EMS services take place on the VHF+ bands,
where CW is primarily used for weak-signal work, what makes you think
they would want to use CW anyway? There are far more VHF FM rigs than
there are VHF all-mode rigs...

If someone posted "gee, we had nice weather today" to this newsgroup,
Carl Stevenson would somehow turn it into an anti-code tirade....

We have a ton of stuff that our father collected over the years. We
have divided it into three lots.
All prices are negotiable. Buyer must pick up stuff in suburb of
Chicago. No delivery or shipping.
Will consider splitting it up but would rather make a deal for the
entire lot.

Lot 1

Meters: Approximately 20 analog meters AC/DC volt, amp, milliamp, etc.
Many are Weston and still in original boxes.
1 Jewell Galvanometer
Several Simpson voltmeters (different ranges) - no probes included
Meters: 40 miscellaneous analog meters. Many in original boxes
Miscellaneous Electronic parts:
Resistors
Photocells (w/spec sheet)
Vidicon tube
Relays
Tuning capacitor
2 headsets
2 Signal Corps oscillators
2 CB converters
crystals (assorted frequencies)
Antenna relay
misc. knobs
transformers
9 things we couldn't identify
Miscellaneous small parts:
rectifiers, diodes, reflectors, BFOs
more
Coil forms, RF coils
Disc capacitors
Variable condensers, Trimmer condensers

$250.00

Lot 2

Sylvania Signal Generator Type 216 (book included)
Heathkit Impedence Bridge (book included)
Heathkit Q-meter
2 Olsen AM broadcast tuners
RCA low frequency tuner
2 Decade resistance boxes (wood case)
Decade resistance box (metal case)
Wheatstone Bridge (Wood case)
Boonton Q-meter (100amp) Serial#370
Wells Gardner receiver
Crystal controlled Oscilator (Blilet Electric) Model 10
TS32A/TRC-1 Oscillator
Pocketscope S-14-A
Heathkit Oscilloscope
Vacuum tube voltmeter - General Radio Type 726-A Serial#759
General Radio Impedence Bridge 650A Serial #1952
2 Zenith tuners
Knight preamp
Tuner DB22A
Variable Air condenser (wood)
Low frequency tuner (RCA)
Precision wavemeter

$250.00

Lot 3

Aircraft tp aircraft radio direction finder
Shortwave receiver
Navy Panoramic Adapter BC1032-A
Hammerlund Superpro receiver with power supply
2 Navy Receivers Collins type COL-46159
ABS-3 Navy Receiver
Navy radio receiver CEX-46152
Signal Corps Amp alignment test unit
Navy Microfilm projector

$250.00

Bring a van and take it all, will make a great deal for everything.

Build your own repeater. And don't give me any crap about there not being any room. I challenge you to name a place where every repeater frequency from ten meters through 1296 has already been allocated.

In the unlikely event that there is such a place, then there are going to be several of those machines that likely will welcome you as a user unless you are a professional axxhole.

Exactly. Ham radio is designed to let a ham do what he's interested
in doing. Anybody who uses the excuse that the bands are full of
geezers, radio cops, etc, is just too damn lazy to get off his butt
and either find others with like interests or find ways to pursue his
own interests. They are probably not going to be good hams, anyway,
and the hobby is probably better off without them.

If they're suggesting it be done as before, five minutes of code will be sent; the examinee will need to copy one minute solid out of the five minutes. That's 20%, not 100%.

What kind of math do they teach out there in Hawaii?
Are you saying that if I can copy 20% of the characters correctly,
that I will pass? That is what you are saying and it is wrong.
Under the ARRL's proposed change you must copy 'perfect code' for one
minute. The other 4 minutes do not count.

I sure wish I knew what kind of math is being taught in our schools
today. it is not 20% to pass. It is 100% of a solid minute. The other
4 minutes don't count. It is a 100% to pass. Boy i might take a 20%
score to pass, but that would still be very tough.

To: KE4IKT.

You seem to have so many solutions to all the problems in the world of ham radio, why don't you go and share them with the world. Try calling Art Bell's "Coast to Coast AM" radio program.

Art Bell is a ham -- W6OBB by call sign and he often talks about ham radio. Oh yes. Did I forget to mention that Art has 10 million listeners every night. (Yes -- thats 10,000,000 listeners!)

I do not know why, but what you espouse here on Use(less)net, seems to fit well in the format of his program.

Go look at his webpage if you do not believe me. Its www.artbell.com and he has an entire area devoted to his own ham radio activities.

de Bill Pasternak, WA6ITF

If you do call in, try the "Wild Card Line" at 702-727-1297.

Hello.

I am interested in upgrading my license.

Now, I only have a amateur basic qualification.
Getting a CW qualification is a good way to upgrade my qualification,
and I will probably do.

I am also considering to take some other tests as well.

If you have any information (the contents of test etc.) to the
following, please let me know. I tried to find out some information
about it from Industry Canada (Spectrum Management)'s Home Page, but I
did not find many information that are helpful.

*** Industry Canada ***

- A radioOperator's First Class Certificate
- A radioOperator's Second Class Certificate
- A Radiotelephone Operator's General Certificate (Aeronautical)
- A Radiotelephone Operator's General Certificate (Maritime)
- A Radiotelephone Operator's General Certificate (Land)

Thanks in advance.

Well, I am concerned about that probability. But my bigger concern
is that the service would be split, even more than it is today, between
those with a technical interest in radio and those who merely want to
yack on the radio. And there is no doubt that the latter would vastly
outnumber the former. Perhaps many of today's licensees don't
experiment, but the knowledge that they *could* if they wanted to
makes them more tolerant of those who do in terms of setting aside
spectrum for specialized activities and in terms of tolerating a mix
of activities in the more general band segments. I'm afraid we'd
lose that if we have an amateur license restricted in much the same
way that CB is restricted from doing technical activities. Perhaps
that concern is unfounded, but it troubles me.

>For the entry class I would suggest a power limit around 100 W for
>commercial equipment (most commercial gear will fit in) and maybe 10 W
>for homebrew equipment (most QRP kits would fit within these limits).
>Even with slightly improperly adjusted homebrew equipment, the
>unwanted radiation levels would still be manageable.

Well, that's a bit better. As I understand the Canadian system, homebuilt
transmitting equipment is completely forbidden to the Basic licensee.
But OTOH I am dubious that improperly adjusted homebrew equipment
would be as small a problem as you indicate. Even a 10 watt signal has
worldwide implications at HF. And you're suggesting allowing that to people
who haven't demonstrated what I'd consider a minimum competence to deal
with it.

>>I'm aware that

As I've noted many times, *none* of our tests are meant to be a means of psychological screening. In a free society, I'm not sure that it would be desirable to implement one even if one existed. The concept of prior restraint is a slippery slope in a free society. I'm not sure we want to punish people for what they *might* do. Dealing with behavioral problems is best done by vigorous enforcement. (If behavioral problems are the issue, then we'd best concentrate on addressing the current lack of enforcement, and not drag those matters into the licensing issue.)

>Over here, the best return of investment for an advertising campaign
>for ham lessons is from the CB community and it has been increasingly
>harder to attract people without CB background.
>
>If this trend continues, the end result will be that ham radio will
>eventually be taking over by ex-CB people.

That's not entirely bad. CB has been the first exposure to radio for many people. Those wanting to move up are clearly signaling that they want to go further in exploring radio than CB allows. And in many cases they want to move up to get away from those with undesirable operating practices. That's really a pretty desirable combination.

>However, this trend can be reversed, if we can also attract other
>types of people with different background and different interests. To
>be able to do this, an entry class must exist that would not require

>some technical knowledge is required, but there is not much need for
>component level knowledge.

I think where we'll disagree is on the level of technical knowledge those things require. Likely I think it is somewhat higher than you do. But I do agree that the level needn't be higher than what the intelligent layman can master with a modest amount of study.

>This entry level license should be sufficient to most casual ham radio
>activities, but for serious activities (such as serious contesting,
>serious DXing, EME or repeater building and maintenance) a full
>license should be required with a considerably more harder technical
>test than the entry class test.

Well now I think I'd quibble about some of that. I seriously doubt that contesting and Dxing require heavy technical skills (though some who do those things have good technical skills, many Dxers and contesters are appliance operators no different from your Basic class). I'd agree

that the requirements for operating EME are somewhat more strenuous
as a matter of public safety. And stations required to operate unattended
7x24 do need somewhat more rigorous attention to detail. But in general,
amateurs of all sorts need the same basic skills and knowledge. Lessening
that somewhat for those operating with low power may be tolerable, but I
don't think it is particularly useful to segregate them by operating activity
too.

Having good tools is desirable, but some tools are essential. Of those,
the one between your ears is the most essential. And that tool is incomplete
without the elementary skills needed to comprehend electrical and
electromagnetic phenomina. In any science or engineering discipline,
one of the most essential mental tools is the ability to assign a number
to a phenomina. As John McCarthy says, "If you can't assign it a meaningful
number, you don't understand it." For many of the electrical phenomina
with which amateurs work, the ability to assign a number requires at least
a rudimentary grasp of the principles of the calculus.

>>But without a rudimentary understanding of the calculus, those tables will

>the tools an engineer uses. I doubt you will find much support for the
>idea that the amateur radio operators must be qualified electrical
>engineers.

I not only understand empirical, I can spell it (heh, heh, couldn't resist). And I
understand what you're saying, amateurs often resort to cut and try methods
(sometimes professionals do too). Sometimes that's satisfactory, sometimes
it is not. But even when one uses empirical methods, one needs enough analytic
skill to properly evaluate the results of such cut and try activity. Just saying "Well,
it didn't smoke." is often unsatisfactory. You still have to measure and evaluate the
result to see if it fits the parameters of the task you're trying to accomplish. The uses
of mathematical skills aren't limited to just synthesis.

>Obviously there are situations in which lacking the ability to solve a

>reason to require amateur operators to have familiarity with calculus as
>part of an HF entrance requirement. This does not preclude the
>possibility of recognizing this ability as part of an advancement in grade
>beyond the introductory level. It's a license to learn, remember Gary?

I'm well aware that it is a license to learn. But like gaining entry to any
laboratory course, there are certain prerequisites which need to be
met. I'm insisting that one of those prerequisites is a grasp of mathematics
beyond the 1+1=2 level.

>>To know the rating needed for the fuse of the supply, one needs to know the
>>integral of the current with respect to time during the charging period. To know
>>what peak current rating diodes one needs, one needs to know the dI/dt of the
>>charging characteristic. How are you to determine either with a constant? And
>>what value should be assumed for that constant?
>
>Ever hear of an R/C time constant? Please, what can you tell us about
>their common use as constants?

First of all I'd note that they aren't constants. They're the product of two variables. And they don't mirror the physical process taking place, which is really an exponential function. Why don't you tell us how to use a time constant to evaluate the peak and average energy dumps in an RC network as a function of time.

>>For example, consider that you have a 20 ampere supply with a filter bank
>>of 250,000 uF. The transformer has an open circuit AC voltage of 18 volts,
>>and a loaded voltage of 16 VAC. What size fuse do you need, and what should

>less need for precision, yet again.

You seem to be ducking. I haven't asked you for an answer to 4 significant digits. I've given you enough information to calculate the peak and average inrush. Will additional inrush limiting be needed here? A simple yes or no will suffice.

>from the ideal.

I'm sorry you feel that way. However, you were changing the subject to cookbook mechanizations, not a grasp of the fundamental ideas behind those mechanizations. The fundamental ideas of the calculus are really quite simple, and need not be cloaked in lots of formalism to be understood. In fact many people have an intuitive grasp of those ideas who have never taken a formal calculus course. Memorizing a bunch of cookbook integration mechanizations is *not* what I've been talking about. If you think it is, then you *are* confused. I don't think that's my fault. I've tried very hard to clearly state that I'm not talking about formalisms or cookbook here.

>>How could you understand the relationship

>evaluate the integral of the function. Differentials are expressed simply
>as deltas.

But in the real world, it is linear change which is the special case. Just as the circle is a special case of the family of curves called ellipses, linear behavior in electronic systems (or other physical systems) is the exception rather than the rule. In electronics, it is often the *desired* exception, of course, but if you aren't equipped to deal with the non-linear case, how can you hope to approach the special case of linearity?

>It has been shown that the calculus does not help the beginning student to
>understand and garner an intuitive understanding of the underlying
>principles - it in fact stands in the way of it. The late Richard Feynman
>at Cal Tech took great strides to avoid the dependence upon calculus in
>his lectures in the interest of helping students to gain a gut feeling for
>the material. Isaac Asimov does a very credible job treating the
>fundamentals, sans calculus, in his book "The History of Physics"

I would note that in reading Feynman's lecture series I did not find him as reticient to use mathematics, including the calculus, as you have indicated. What he did do is avoid the unnecessary formalisms beloved by the pure mathematicians, and what he did do is relate the math to the physical systems in a concrete way. I support that idea wholeheartedly. And while Dr. Asimov was an esteemed science popularizer, I don't think his efforts are exhaustively indicative of the sort of knowledge needed to function in a technical field.

>The majority of basic Newtonian mechanics problems can indeed be solved
>with algebra and trig - the same holds true for amateur radio related
>electronics problems. I'll not let you have the last word on this point
>Gary, unless it is capitulatory in nature. ;-)

Well, in the words of a famous Civil War general, I'm prepared to fight it out on this line all summer if necessary. In regard to Newtonian mechanics problems, it might be useful to remember who it was who found it necessary to invent the calculus to solve the general class of problems in mechanics.

Hey guys, just a thought here. I used to be in the Air Force and wound up brushing elbows with some people who design and build the most esoteric and advanced antenna structures in the world; antennas which perform, well, unspecified tasks. I asked where they got their ideas. They told me the ARRL Antenna Book. It seems that hams have always been the real artisans of communications because, quite simply, we built our own stuff and we experimented with ideas. We were not people who just went out and BOUGHT technology, we BUILT it.I've been hamming 35 years and still wish I could lay my hands on a good set of 4CX1000's and enough land to erect a terminated rhombic so I could PLAY with the resistance values. By the way, I hate to say it this way but CW has always performed an important function to the ham community, and most of us old-timers know exactly what that is.

5097. @@@ ATTENTION: CALL SIGN @@@

I have received numerous complains regarding to my call sign.
I thought it would be a very good idea to ignore a mass
correspondences regarding to the call sign. However, I decided not
to. I wanted to ignore the people whom forced the false statement,
but I decided to clear the problem as the problem is getting bigger
and bigger.

As I posted, my call sign is "VE7JPN." You may wonder why I have a
such coincidential call sign as I came from Japan.
This is how it works:

VE7 = British Columbia

***(last two or three letters) = you have a choice to chose. Some
people chose "CW, SSB, CAN, BC, VAN.......... " It is completely legal
to choose any call signs that you wish. If you want to choose "SEX,
MAN (and whatelse....) " it is legal too. I choose "JPN"
because I couldn't think any of other letters that would fit me.

Go to:
http://www.aras-sara.ca/arasbook.htm (This is a official Canadian
Call Sign Database from Industry Canada. You will NOT find my call
sign on QRZ database. I am an amateur for only three months. Please
do NOT assume I am not a legal because you do not see my call sign on
US database (I received a number of complains because they did not see
my call sign on US database) , QRZ CD-ROM or any other materials that
show the call signs. Go DIRECTLY to Industry Cabada's Database.)

Look Up:
VE7JPN

You will find the information of me.

If you prefer not to know the fact, that's fine for me. But please
stop blaming me that I am not a legal amateur. I am getting sick of
handling 100s of letters to answer why and how I am a legal amateur.
I hope I can reduce a number of the complains and the letters, but I
am sure there are still people who want to blame on me. If you do,
do it to me privately. Please do not take it to public.
I do not want to handle mass complains anymore.

I know I am stupid, and that's fine. You tell me my English is
fu**ing and s***. I accept it.

I know you are smart who believe that I am not a legal amateur.
You are superior over me. You are amazing me.

But..... I do not think I have to be removed by some kind of
forces that support false statements.

Thank you for your consideration.

>interference committees.

Depends on who they reallocate the spectrum *to*. The FCC may be a
paper tiger these days, but a lot of the corporate spectrum users aren't.
They have hordes of lawyers sitting around on retainer just waiting to sue
someone. If you don't believe that, just ask the hams in California who
clashed with the vehicle location people on the 902 MHz band.

>Bodies add up to votes and money, both of which are prime movers in

Bodies do add up to votes and money, but the minimum figure that's
significant on a national level is on the order of 5 million bodies and
$100 million dollars. As to 220 MHz, it is heavily populated by the
corporate users to which it was given. And they are very jealous
of interlopers. You didn't really expect *hams* to police a band that
they had lost did you? Of course not, the new tenants do that.

The AM/FM/TV Broadcast Station Location Page is On the Air

**** NEW! Antenna radiation patterns are now available for ****
**** AM Stations, as well as FM and TV Stations. ****

The Broadcast Station Location Page is an on-line service that provides information on AM stations throughout the world, and on FM and TV broadcast stations in the US. Based on the data provided and maintained by the FCC, the Broadcast Station Location Page provides a search engine that allows you to search for all the stations in a given area, or in a range of frequencies. Stop by soon, and see what's available.

http://www.jagunet.com/~kodis/station.html

Currently, the broadcast station location page offers these features:

* NEW! Thanks to John Byrns, jbyrns@pyrotechnics.com, antenna radiation patterns are now available for AM stations, as well as for FM and TV stations. John researched, developed, and generously contributed the algorithms required to derive the theoretical radiation pattern from the information on the location and phasing of the antenna towers used by an AM broadcast station. He additionally pointed out several long-standing errors and offered numerous suggestions for improving the antenna radiation pattern displays. Thanks, John!

* A tabular display providing a one-line summary of all stations found is provided showing each station's call sign, frequency, power, antenna information, bearing, distance, and location. Alternatively, either a detailed map of all stations found or a plain-text listing of the summary information can be generated.

* Each station has a link to a detailed information page listing voluminous amounts of technical information about the station, including a plot of the station's antenna radiation pattern and a navigable map of the station's location.

* Provides coverage of FM and TV stations in the US, and of AM stations throughout the world. Support for shortwave, NWS, DGPS, and other stations is being developed. Stations found can be sorted by distance, effective radiated power, or antenna height. Sorting by estimated signal strength is being planned.

* A table of all stations operating on a given frequency can also be generated. Tables listing the number of stations on each frequency and within each country and service class are available.

* A full source distribution is available to anyone who would like
to browse, tinker, adapt, or duplicate this service.

Please note that this search engine is continually being developed,
enhanced, and tested. If you have difficulty using it or have
suggestions for ways of improving it, please drop me a note at:

kodis@jagunet.com

Check out the new broadcast station location page, now operating at:

http://www.jagunet.com/~kodis/station.html

Pole Climbing Gear FOR SALE

I am no longer in the telecommunications industry,
The following is what I have for sale:

Everything is either new or very low mileage

Bashlin - D21 Climbing Belt
Klein Safety strap
Klein Climbers - complete with spike guards
Klein Safety Orange Tool Bag - Type 5180

All of this for $250.00

I also have:

2 LTC X-500 Coring tools for Trilogy MC2 cable
1 LTC T-500 Coring Tool for P3
These are still in the Box, $35.00 each or
$100.00 for all three

Mid State - SAM 1 Signal Analysis Meter
(Field Strength Meter) In good condition

$300.00

If you are interested, please send Email to:

Howdy Jeff,

Welcome home, Nevada get a little dry for you?

Anyhoo one problem I have with this solid copy stuff is I just don't seem to be able to write that fast. I scribble down the callsigns, abreviate the rig and antennas stuff, do numbers only on signal report and power. It is essentially the same as the way I copy an IFR clearance; I receive and comprehend the data but do not write it all down. Short notes and symbols record the information while the the verbosity is shed. On the 13 WPM test I answered all the questions but I doubt there were 65 (or 50 under the new proposal) characters in a row. I think the current system is more fair to the cursively challenged, not to mention a lot easier to grade for us VEs.

You experience is appreciated. However, I have installed Windows 95 on
many systems including two medium sized networks. It is well liked and
more stable than 3.1 in my experience. Plus it has built in
networking. The one thing you should never do with windows 95 is turn
the computer off while the program is still running. Maybe that
happened to you. IT is usually very easy to recover as pushing the F8
key while loading windows brings you to a menu which allows starting in
the "safe" mode for trouble shooting. Anyway...I do recognize that what
works for me may not be the best choice for you.....ED N6XA

Back to the original question -- Why collect 10-10 numbers???

Ok don't -- let the band be dead as the old door nail -- don't use 10M
until "skip" comes back etc

Then some body will come along and say -- Hey this is a dead band --
lets give it to _______.

Sound far-fetched --- well it happened years ago -- called the 11M band
as I recall.

> Howard

Yo Howard
Here in San Diego we had some horrible fires -- did you see them on TV??? The guy who handled net control for hours and hours -- was superb, absolutely beyond question - the perfect man for the job. Why -- he is an ex- service pilot and knows how to organize and communicate, his license -- Technician. Electronics background - very little.

Here in San Diego we have a visually impaired ham (technician license) -- he has a marvelous voice -- runs several important nets including the SD Traffic Net. He is radio Announcer and a good one, very little electronics background.

Here in San Diego we have a YL (tech) who participates in every charitable event imaginable. No electronics background. She puts in long hours -- rain or shine, hot or cold for OTHERS!!!

Need I go on thru our roster of the other 900 Amateur Radio Operators???

Guess you don't have those kind of folks in yore part of the country -- 10-4????

If you aren't using amateur frequencies, then how can you be operating in the amateur service? By "any means at your disposal" I'd take this as authorizing *spark* on the amateur bands, or using excessive power on the amateur bands, or the like, in a life or death emergency. But how can a provision of the *amateur* rules authorize you to operate outside of the amateur service? Obviously it can't.

Of course there are similar provisions in the rules of other radio services. So you might, as a person unlicensed in that other service, be able to operate there in an emergency covered by their version of life or death exceptions. But having an amateur license would have no bearing on that.

The FCC is out of the testing business (they're practically out
of business period). You hunt up a volunteer exam session,
take elements 1C, 4a, and 4b, and you're an instant Extra.
You can operate with your new privileges immediately. If
you want a new call sign, check the box on the application,
and the FCC will have it in the mail to you in a week or two.
You can start using it as soon as it appears on their website,
though, so you don't need to wait for it to arrive in the mail.

>What is the best study guide for the technical stuff?

I tend to like _Modern Signals and Systems_ by Kwackernack and Sivan,
but you can probably scrape by with the ARRL Handbook's theory section.
The technical stuff isn't all that technical on the amateur exam, a 5 year
old girl has passed it.

COLORADO 14ER RADIO EVENT ANNOUNCEMENT

The 1997 Colorado 14er Radio Event will be held Sunday, August 24th. During the event, a group of amateur radio operators will operate portable from the summits of various Colorado 14000 foot mountains. The operating times will be from 9 AM to 12 Noon local time.

Radio amateurs are encouraged to work as many of the mountaintop stations as possible. However, this is NOT A CONTEST, no points are awarded, no scores recorded. A special event QSL card can be obtained by QSLing to the mountaintop station's home QTH (please include a Self-Addressed Stamped Envelope). Most mountaintop stations will be running low power handheld radios. To reduce QRM, PLEASE DO NOT USE HIGH POWER (more than 50 Watts) and do not call 14er stations unless you can hear them.

Radio operators with 14er hiking experience who wish to participate should contact Bob, KB0CY at RobtWitte@aol.com (e-mail is preferred) or voice mail at 719-488-0859. Updated information on the event is posted at

http://members.aol.com/RobtWitte/Colo14er.html

To avoid having multiple stations on the same peak, radio amateurs that want to participate must coordinate with KB0CY.

Good for him, but if I stop someone from bleeding to death I would not expect to be issued an M.D. license.

>

Giving people are found in every venue. Doesn't mean they meet the licensing requirements of any particular group, though. You seem to want to include them because they're nice.

>
> Need I go on thru our roster of the other 900 Amateur Radio Operators???

You seem to believe that fewer good people would be hams if the requirements were higher. Typical fuzzy Calif. thinking.

Hello to all, I'm looking for a 440 UHF ham radio. Does not have to
be the latest and the greatest but it must be in good shape and in
good working order. Preferably a few memories, touch tone mic, 25 watts.
Also, PL is a must. I might consider a older dual bander, like a
Kenwood TM-721, etc.
I just missed a 721 at a local hamfest for $215. Oh well.

Thanks to all, Mark, N2FLF

Your anonymous posting lacks either a references line or any
attributions to the quotations, but it seems to be something I wrote.

> >No provision of these rules prevents the use by an amateur station
> >in distress of any means at its disposal
> means to me, if you are in distress, then you cans use any means at your
> disposal, i.e. any frequency you want!!

If that's what it means to you then you should sue your high school
for failing you badly. This is just simple 12th grade English
comprehension, and I'm puzzled at the difficulty it is causing. Try
this different sentence:

"Nothing in this posting that I wrote and that you are now reading
forbids you from robbing a bank."

That's a simple and true statement and it should be plain enough. Or
do you really believe that I just gave you permission to rob a bank?

> Sorry, but I totally disagree with you on this point. It is clear to me
> that the intended use of this clause is emergency traffic and it's
> possible use out of band. I will have to go through my question pool
> again, but beleive this was included in there somewhere.

Please come back with the question from the pool that you believe
helps to make your point. I gave my question pool books to a friend
who's moving up the incentive ladder. If I hear nothing more I'll
assume that you found the question and now see the light.

Please note that the FCC knows well enough how to permit something
when that is their intention. See how they write:

S 97.111 Authorized transmissions.
(a) An amateur station may transmit the following types of two-way
communications:

If and when the FCC intends to grant a permission, they state it
clearly and affirmatively. And when they write in the negative that
they are not preventing something, clearly their very differnt choice
of phrasing is neither careless nor accidental.

The intention of these rules is not to permit or allow anything, it
is merely a defense against a claim that the FCC rules prevented the

saving of life or property. I hope you follow my meaning.

I usually ignore anonymous postings, but I responded to this one because I am anxious that no one accepts your very mistaken reading of the regulations.

Regards,

5128. AADE filter design update

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-08 00:00:00 UTC
From: Neil Heckt <neil@aade.com>
Message-ID: <339B00FB.17E5@aade.com>
Source record: 196158

A customer found a bug in Version 1.4. UTILITIES | ENTER DESIGN allows you to enter the schematic and parts list of a filter from a book or magazine for analysis. The program normally saves design specifications for those filters which it designed and uses them to set defaults for analysis. In the case of ENTER DESIGN it does not know the design specifications and saved a bad piece of data. Trying to LOAD the filter caused a runtime error 13 and the program aborts.

Version 1.6 fixes the problem by storing dummy values for design parameters thus producing dummy default analysis parameters that usually work as a firts analysis attempt.

To update to version 1.6, go to my web page and follow the thread to the download page. Download filter.zip, unzip it and replace the filter.exe program where ever you installed it.

Would you limit the entry license to only a certain set
of allowable antennas? Maybe I'm overly reading
something into what you suggest, but many hams,
especially those with a limited power situation, would
opt for directional antennas to improve their capability.

>>What's the intent of excluding an entry license from EME?

But there is no treaty requirement for 13wpm or 20 wpm. Those are
past choices of the FCC with strong ARRL support at the time.
The FCC could set a one wpm code speed test and that would
totally comply with the international treaty. That is why Len
Winkler's WOG and several other alternate license proposals
COULD be implemented today with no change in inernational treaty.

In fact, many other nations have lower CW requirements than
the US does for General and above.

5133. Help! - Yaesu synth chip PD2819C needed.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-08 00:00:00 UTC
From: Dave Evans <Dave@devans.demon.co.uk>
Message-ID: <It5NCIA2IxmzEwW5@devans.demon.co.uk>
Source record: 196163

Hi,

I have a defunct Yaesu FT-730R, which is quite an old 70cm synthesised rig.

It recently stopped working, and the problem seems to be the main divider chip in the synthesiser.

Yaesu in the UK tell me it is an obsolete item, so I'm wondering if anyone has one, or knows an equivalent.

The part number is a "mu"PD2819C, an 18 pin DIL device.

Any assistance re-imbursed of course - without the chip the set is bound for the scrap heap!!

Thanks

Dave.

>uninformed observer ...

There are (IMHO) two thresholds of competence. One is an
ability to use the radio following generally accepted operating
principles and the other builds from there to include specific
skills in passing emergency traffic. I believe casual use, contesting
and many other operating aspects of ham radio contribute to the
first level and those hams can be effectively integrated into
an emergency response. However, I will note that it is the real
emergency preparedness drills and practices that povide the
operators that will serve as net controls or otherwise be in
leadership roles.

Vottom line is that I don't view contesting as the great negative that
some people do. I think it does bring out some real LID
operators whose misuse of power and operating procedures
are abominable, but I also know many that just like to participate
and keep score for themselves...and in so doing, they become
that much more familiar with on-the-air situations.

Oh, I doubt that. I don't know how on earth you can speak for all of us. I got my start in ham radio due to a neighbor being a ham - I'd never even heard of CB back then (~1963). Also, anyone on here who was licensed prior to ~1959 certainly didn't get interested in ham radio via CB since that was about the time when 11m was taken from the hams and given to the new CB service.

June 9, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & 59(9) DXReport, W3UR & The Daily DX, K4RO, WT4K, W5IJU & Island/DX News, K8SM, NW8F, G3NOM/9M2OM, DJ5AV & DX News Letter, ER1DA, G4BUE & DX News Sheet, GB2ATG & BARTG, F5ATD, PS7AB, RA1QHJ and VE1CBK for the following DX information.

A6, UNITED ARAB EMIRATES. The "DX News Sheet" reports Jamal Al Maktoum, A61OU, is a newly licensed operator and will be active sometime this week. He is the cousin of A61AD. QSL via N1DG.

CORRECTIONS.....
Patrice, F5ATD, informed OPDX that the correct address for TM0RSE is: P.O. Box 20, F-14480 Creully, FRANCE (not P.O. Box 22 as reported in last week's bulletin).

Last week we reported under "BV, TAIWAN" that SM3EVR would be active from here, this is wrong (there was a mix up in the callsign) the correct operator is SM3SGP, and he will be active until October as SM3SGP/BV2. QSL via SM3EVR.

CY0, SABLE ISLAND. Wayne, VE1CBK, will be travelling to Sable Island for work reasons on June 7 and will be there until around June 23rd. He expects to get on the air about June 12 or 13th and will be operating during his off hours. He will be on all bands HF (except 160m). He will also be active on 2 and 6 meters (50.132 and 144.200 MHz). The callsign will be CY0SAB. QSL to VE1CBK.

FK, NEW CALEDONIA. Didier, F5PXQ, is active as FK/F5PXQ. He will be here for the next three to four years. His activity will include RTTY. He has been heard on 20 meters SSB (above 14250 kHz) between 0330 and 0545z. QSL to his CBA.

FR/E, EUROPA. FR5KH, who was recently active from Juan de Nova with FR5FT, states he will be active as FR5KH/E from Europa Island the next

time he visits the islands.

GU, GUERNSEY. A group of BARTG (British Amateur Radio Teledata Group) members will take part in the CQWW RTTY Contest, September 27-28th, as a Multi/Op team on all bands from the club radio station using the club call GU3HFN.

HP, PANAMA (HR, HONDURAS, possible). Bill, WT4K, will be active as HP3/WT4K, June 23-27th. He will be active on SSB and RTTY. QSL to home call with SASE. If travel arrangements can be made, he will also go to Honduras as HR6/WT4K June 30th through July 4th.

HS, THAILAND. Chai, HS1NGR, was active for a couple of days on 14195 or 14180 kHz between 1300 and 1600z.

HZ, SAUDIA ARABIA. Sam, HZ1CCA, in Riyadh, has been quite active on 40, 18 and 15 meters SSB. Activity times vary throughout the day, but watch around 7060, 21235 and 18135 kHz. Meanwhile, HZ1AB was very active this past weekend on 18160 kHz between 1300 and 1500z. QSL via K8PYD.

KP2, U.S. VIRGIN ISLANDS. "The 59(9) DXReport" states N2OO, KF2BQ and N2LD will sign homecall/KP2 July 24-31st. Their stay here will include the IOTA Contest and activity on 160-10 meters CW and SSB. QSL via their respective homecall.

NEW SIX METERS BEACON. A new beacon is now active on 50.080 MHz sending the following message every 3 seconds: VVV BEACON DE PP1CZ PP1CZ GG99UQ GG99UQ 3 WATTS 5 ELEM YAGI VVV. The current antenna is a 5 elements Yagi (for a short time until a vertical can be fixed by July). Send reports to: PP1CZ, P.O.Box 010.629 - Vitoria - E.S. Brazil (or Internet e-mail: pp1cz@br.homeshopping.com.br).

"POLAR-97" DXPEDITION! Nick/RA1QQ, RW1ZZ and RA1ZZ reported that they are planning a major DXpedition during the second part of June to the islands of Barentsevo Sea. After the 15th of June, they want to visit the following islands: Kildin Island (EU-82), Bolshoi Olenij Island (EU-61), Harlov Island (EU-161), Novaya Zemlya Island (EU-35) and possibly Bolshoi Ainov Island (a new one for IOTA, EU-???). The team will be using special callsigns as homecall/1 (ex. RA1QQ/1, RW1ZZ/1, RA1ZZ/1). Also, they will be using the team callsigns: UE1QQQ/1 and UE1ZNF. Additional information about this DXpedition can be obtained from RA1QQ or RW1ZZ on the air or via E-mail at: Albert_Marcovchuk@p18.f350.n50.z2.fidonet.org

QSL INFO AND NEWS.....
Kirk, K4RO, reports he has been receiving cards for contacts made with UA8TAA in June, 1992 (mainly from JA). He states that he is not the QSL manager for UA8TAA or anyone else for that matter. Once again, K4RO is *NOT* the QSL manager for UA8TAA.

Den, A35DB, was heard on the air saying to QSL to W7TSQ. Not W7SNH as reported in last week's bulletin.

HS50A QSLS. For the IOTA DXpedition to Koh Chang which took place in 1996, Ray, G3NOM/9M2OM, reports QSL cards have been printed and distributed to all stations who sent direct to I1JQJ and JA9IFF, as of 3rd June, 1997. Bureau cards are still being dealt with. Requests for verification received via E-mail will be accepted, and if verified will be confirmed by a QSL card returned via the Bureau. The operation which took place May 8-11th made 2488 QSOs (CW 1427 and SSB 1061). Due to the season and poor propagation, only 29 North American stations were worked. The logs and QSL cards (which have been printed) are now with the QSL Managers, therefore, QSLs should be sent out soon.
QSL info for both DXpeditions go to:
I1JQJ - Email - <i1jqj@amsat.org>
JA9IFF (For Japan only) Email - <jim@ba2.so-net.or.jp>

The address of the Moldovian National QSL-buro has been changed since April 15, 1997, to: National QSL-buro of MOLDOVA (ARM), P.O. Box 9537, Kishinev, MD-2071, MOLDOVA.

R, FRANZ JOSEF LAND. Nick, R1FJV, continues to be active, mostly on CW. He will be here until the end of the year. QSL via UA3AGS.

SV, CRETE. The "Island/DX News" reports that Manfred, DL8SET, will be active signing /SV9 from now until June 20th. No QSNs reported yet. QSL via home call. Also, look for SV9DJV and SV9DRO to be active on SSTV. This is believed to be the first SSTV operation from Crete. Meanwhile, SV9/OM7RU has also been active, mainly on CW. He was heard on 20 and 18 meters between 1130 and 1600z. Length of activity is unknown at this time.

SV5, DODECANESE. Another report of an operator that will be active from here is Vito, I3BQC. He will be active from June 16th to the early part of July from Karpath-os Island. QSL via bureau to his home call.

TJ, CAMEROON. Mark (ex-J5UAI) is now active from Yaounde as TJ1US. Mark is running an ICOM 735, and we are not sure if he has his amplifier operating yet. His antennas are a Mosley tri-bander, dioples for 40/80 and a Butternut vertical. We are not sure what he will use for 160 meters. He plans to be active on all bands CW/SSB/RTTY. His tour of duty at the U.S. Emabassy in Cameroon will be 2 years. All QSL cards go to NW8F.

YN, NICARAGUA. Hiro, JA6WFM, will be active until the end of December as YN6WFM. He can sometimes be found on 20 meters operating RTTY on 14085 kHz between 1130 and 1230z or SSB on 14190 kHz around 2315z. QSL to JA6VU.

There's also the Alaska situation:

SUBPART E - PROVIDING EMERGENCY COMMUNICATIONS

97.401 Operation during a disaster.
(d) A station in, or within 92.6 km of, Alaska may transmit
emissions J3E and R3E on the channel at 5.1675 MHz for emergency
communications. The channel must be shared with stations licensed
in the Alaska-private fixed service. The transmitter power must
not exceed 150 W.

>>Plain English when on voice? Then why are you using the CW prosign "CQ"?

>I'm not. And when I did, I did it responsibly.

Responsibly? How would one use "CQ" on voice in an irresponsible manner?
(Yes, I've heard 10-by-10 CQs, but at least the op is giving you time
to tune up...)
Regardless, you *have* used CW prosigns on voice, yet you're calling for
everyone else to cease using them. Even the prosign "73" on voice would
violate your desire for everyone to use plain English.

>Now go back and read
>what I wrote, not what you THINK I wrote.

Go eat some prunes for your constipation, Glen. It's very clear to me
what you wrote, and it should be clear to you that CW prosigns (which
include Q-codes) are an ingrained part of voice comms.

>>According to the ITU, the voice equivalent of CQ is "Hello all stations."
>>If you're serious about plain English when on voice let me know next
>>time you're on HF - I'd like to hear you be the first ham in history
>>to make the general call while on voice and not use "CQ."

>OH, hell, that would be too easy. Any decent band opening could get
>me lots of contacts just by announcing my callsign and mentioning the
>magic word "Idaho." I could say "Hello, Japan, calling any JA
>station" and get hundreds of calls if the band were open.

Only if those hundreds of stations were sitting there on your freq'y.
Generally it takes at least the use of a 3x3 call to attract the
attention of those folks spinning the dial.

>I wonder how hams manage to make random contacts on two meters without
>using "CQ?"

You need to explore the difference between HF and VHF operating. On
VHF you generally only need to announce your call; all your regular
buddies are sitting on that same freq'y - that's certainly not the
case on HF - we don't have a calling freq'y that everyone hangs out
on, nor do we have anything close to the channelization scheme that
occures on VHF.

>>You might become famous and start a trend.

>And you might read for comprehension, and avoid embarrassment.

Shouldn't that read "... to avoid embarrassment"? (No comma.)
Anyway, you're just mad because you now realize prosigns such
as CQ and 73 which you've undoubtly used violate your own call
for plain English on voice.

I don't see a technical reason to limit the antenna type in general.

There are some near field issues to consider. I think there are a 7 W power limit for hand held radios. At SHF you must also consider the power densities from a waveguide and horn antennas. The power density can be alarmingly high a meter or so from the antenna, so it might be wise to limit the power on SHF.

On HF, VHF and lower UHF the gain obtainable from antennas with practical mechanical size is quite moderate, so I do net see a need for a separate ERP limit on these bands. However, on upper UHF and SHF the ERP levels can be quite high if the power limit is the same as on HF, but if the power limit on SHF is limited due to the near field risks, this should take care of the ERP problem.

In general, a ham in the entry class should not be required to do _detailed_ RF safety evaluations, thus the moderate power limit in the first place.

As a side note, it is strange to notice that the US Tech exam contains very little about RF safety and still the allowed power limit is 1500 W.

Hi and thanks in advance for your help,

I trying to repair an RCA 19" TV. The symptoms are that it is
"Deader thank a doorknob". It was on and all of a sudden it went dead.

The power is making it up the cord and through the fuse. The next thing i
would normally check is the on/off switch. The switch itself seems OK,
but the set also is able to be switched on and off by remote control, so
its possible that this is the problem. However, I'm open for any ideas.

Thanks again for any help you can offer

Ooh, you're soooo smart.
However, it's still the FCC who requires the code, here in the USA.
You can blame the ARRL all you want, but the FCC makes the rules.
>

Ooh, you're soooo smart.
The treaties haven't been "excepted", so they stand.

>
> This is just more typical pro-code excuses for maintaining antiquated
> "requirements" ... nothing more ...

Oooh, you're soooo smart.
If you had actually been following the discussion re: CW requirements,
you'd see that I'm definitely *NOT* in favor of them.

Explaining why they are there is not the same thing as being in favor of them.
But then, being so smart, you knew all of the above, and just posted to test me, right?

>Getting a CW qualification is a good way to upgrade my qualification,
>and I will probably do.

CW gives you access to the HF bands. 5 WPM lets you use 160 m and 80 m bands only, while 12 WPM gives access to all HF ham bands.

The *other* way you can upgrade your ham licence is to get your Advanced qualification. This lets you build your own transmitters, use more power, be responsible for a repeater or a club station, etc.

And that's it. Once you have 12 WPM and Advanced, you are a "maximally qualified" ham in Canada.

>- A radioOperator's First Class Certificate
>- A radioOperator's Second Class Certificate
>- A Radiotelephone Operator's General Certificate (Aeronautical)
>- A Radiotelephone Operator's General Certificate (Maritime)
>- A Radiotelephone Operator's General Certificate (Land)

These are not ham licences, though having them may give the holder some privileges in the ham bands as well. If you're curious, why not phone Industry Canada and find out what these licenses are needed for?

Dave

There was a strong propagation for CB radio, 10m and 6m bands today
(June 7, 1997 from 3:00PM-5:00PM PST). I heard some signals from
California and Alberta today. (I live in southern central B.C.)

If you are interested in the propagation, I would like to try to
contact you everyday around 4:00PM (PST) - 5:00PM(PST) if it is
possible.

I will be on CB channel 1 or channel 18 AM mode (channel 18 if the
channel 1 is already used) in everyday basis. I will use call sign
"160 Penticton, BC."

I appreciate your e-mail if we are unable to contact each other... for
the signal report

Have a nice day.

CB radios can be the beacon too.... I heard some signals from
2000km away today. Many people are using the CBs so it is not bad
idea to listen into the conversation to find out how the propagation
is going.

Lots of people who post on the newsgroups use extra characters in
their return addresses to beat the spambots. You didn't know this?
You haven't seen any others doing the same thing?

Which guarantees backwardness and lots of scores ...

> Which means if you aren't a member, you have no say.

Hell, even if you *are* a "member" you have no say ... the
BOD does what the BOD damned well pleases ... when
someone writes in with a comment that's against the BOD's
views/agenda, they get a "go away kid, ya bother me" response.
Sometimes it's more polite and subtle than that, sometimes not,
but the *meaning* is always the same ...

> With the popularity of the Tech license these days, if more Techs
> would join ARRL I think you might just see some more changes in the

The majority of hams who are non-members would be better served,
IMHO, but starting a progressive organization to wrench control of
ham radio "representation" at the FCC from the fogies at the ARRL.
The fogies are so entrenched (not to mention the bureaucrats in
the staff) that there will be tremendous resistance, even sabotage,
to any attempt to "take over the ARRL from within."

Sometimes, sometimes not, but I agree with your basic point. My primary gripe with contesters is that they should voluntarily restrict themselves to a band segment that will allow non-contesters to use the bands on a contest weekend. As for DXers, the less said the better, in most cases. I don't think you can make a case for the average DXer being a trained resource during emergencies.

I'm not. And when I did, I did it responsibly. Now go back and read
what I wrote, not what you THINK I wrote.

>According to the ITU, the voice equivalent of CQ is "Hello all stations."
>If you're serious about plain English when on voice let me know next
>time you're on HF - I'd like to hear you be the first ham in history
>to make the general call while on voice and not use "CQ."

OH, hell, that would be too easy. Any decent band opening could get
me lots of contacts just by announcing my callsign and mentioning the
magic word "Idaho." I could say "Hello, Japan, calling any JA
station" and get hundreds of calls if the band were open. Lucky for
you, I don't operate HF any more, so I won't be taking up your
challenge.

I wonder how hams manage to make random contacts on two meters without
using "CQ?"

>You might become famous and start a trend.
>
>Jeff KH2PZ / KH6

And you might read for comprehension, and avoid embarrassment.

An Amateur was fined by the FCC a couple of years ago because he used a
U.S. Forest Service repeater during an emergency on the Colorado River.
They decided that he could have used a local ham repeater, and out-of-band
use of his HT was not appropriate. If you do it, better make sure it really
is a life-and-death situation..

An FCC Engineer at the Denver Federal Center (Denver, CO) told me that
their highest priority is daily problems with interferance to Public Safety
communications, much of it intentional.. Don't play out-of-band and end
up being one of the 'targets'..

> >>Paul OH3LWR
>
> Paul,
> What's the difference between serious DXing and any other QSO?

Indeed ... the entire notions of "serious contesting" or "serious DXing"
seem to be oxymorons ... they are nothing more than comptitive
sports ... the radio equivalent of paintball wars and other testosterone-
driven combative pursuits ... that Paul appears to consider them some
sort of "pinacle of ham pursuits" really surprises me ... his other posts
have been toughtful and intelligent ... perhaps (hopefully) I am misreading
his intended meaning here?

> What's the intent of excluding an entry license from EME?

To me, the fact that, for practical purposes, it generally takes something
near legal limit power is quite sufficent ... current entry level licensees
have not passed a theory test that indicates they have sufficient skills
and knowledge to be in charge of operating such systems ... note that
the current proposal for 2 HF classes and one VHF_and_up class would
require that everyone pass a more rigid technical test than the current
no-code-tech test and still both the VHF and entry level HF classes would
carry a power limit of say 100-250W on HF and maybe 50W on VHF and
up ... to get the 1500W output priv would require a more rigorous demonstration
of technical competence commensurate with that priv ...

> I can see limiting the use to commercial equipment,

This is a VERY dangerous thing, this "type acceptance" ... it will
stifle experimentation and drive up the costs of commercial equipment
SIGNIFICANTLY ...

However, the cost of multiple conversions is fairly high ... extra LOs to
generate, filters to include, etc. etc. ... it adds a lot of complication in
the analog parts of the radio where things like tolerances, drift, etc. can
affect performance and reproducability in ways that add cost ... all I am
saying is that we are at, or very nearly at, the point at which dramatic
changes in arcthitectures will take place for reasons of cost, performance,
and efficiency ...

Not just improved signal designs and codings ... but new architectures
... anything that's not "like in the good old days" is rejected by most.
And they want to keep those backward rules so that their old-fashined
ways don't have to stand the test of natural selection/evolutionary forces
on a level playing field ... this is akin to genetic engineering, it's
unnatural,
dangerous, and probably will ultimately have disastrous consequences ...

It is one minute out of 5, but you have to have 100% perfect
copy of that minute, nothing else counts, so it is a 100%
requirement ...

It's sort of like the code test vs. everything else ... in the
current system, one can choose to ignore, say RTTY, on
the written test and still pass, but ignoring the code portion
will preclude one from obtaining a license ...

The proposal to revert to "solid copy" is just another attempt
on the part of the pro-code Luddites at the ARRL to maintiain
Morse as the dominant determiner of ham priveleges ...

I disagree ... Gary has commented previously to the effect that
DXing and contesting do NOT develop the correct skills for handling
emergency traffic and I agree with those comments ... and I've done
thousands of hours of public service/emergency work over the years
(floods, earthquakes, brush fires, etc.) so I am not speaking as an
uninformed observer ...

> (And as an added bonus, the FCC has recognized the value DXers have
> provided towards international goodwill over the decades by awarding
> us with S97.1(e).)

Baloney ... most of the non-DX-hound foreign ops that I have
met and gotten to know in extensive foreign travel/living in foreign
countries find US DXers to be the "ugly Americans" of ham radio ...
a bunch of over-testosteroned, rude, thoughless boors who stomp
everything in site with no sign of manners amongst them ...

> * "Radio art" as mentioned in S97.1(b) does not only include the design

> traffic approaches that of contest-type operating.

But, Jeff, the fact that you try to ignore is that the types of messages
that need to be passed in emergency situations are far different than
the canned contact of a contest op ... the hit-and-run type of contact
that contesting promotes is not the same as relaying real, important

message content ... and the "stomp everyone else into the dust" mentality of the contester or DX pileup-buster is not the sort of behavior that we need trained into our emergency operators ... organization, cooperation, and good, disciplined behavior are far mor important qualities and they are seriously lacking in most contesters and DX hounds who view radio as a solo, competitive sport ... perhaps it might be valid to argue that the old NTS operations taught something resembling the correct behavior, but contesting and DXing are far from the mark ...

Nothing "nth hand" about my report ... I reported what was DIRECTLY
said TO ME, face to face, in person ... and a Bureau Chief hardly
qualifies as a "secondary bureaucrat." You clearly don't have a very
clear understanding of the structure of the agency. I suggest you ask
Phil Kane (who used to work for the Commission) if a Bureau Chief
is a "secondary bureaucrat" ... that's sort of like calling a Deputy
Director at the FBI "a flatfoot who walks a beat."

I wish someone would define the CB mentality. Certainly,
as a license free service, it allows any individualto get on
the air and there's plenty of idiots that do...BUT, there are
also others that do use CB while on the road, amongs friends,
etc without violating laws, etc.

Now I have no idea how passing a ham license with
code results in any difference in terms of the amateur personalities
than those passing without a code test.

Hi all,

I got my novice in 1974 and my General in 1975. I have
recently become active again, and I would like to upgrade
to Extra. Since CW is my only mode, my speed is more
than adequate.

How do I do this? Things have changed so much since
I was last at an FCC office. Do you still go to
an FCC office for the tests? What is the current
procedure?

What is the best study guide for the technical stuff?
Is there a web site that I can refer to for this
information?

Thanks for any help. Hope to see you in the lower 25 khz soon!

Emergency communications for the safety of life and the protection of property is spelled out in PART 97.403. Read it.. It says: No provisions of the rules prevents an amature from transmitting on ANY frequency or use any means of radio communication to protect life or property.

Part 97.405 says that ANY station in distress may use ANY means at its disposal to attract attention and make known its condition and to make known its location where normal means of communication are not available.

A word of caution, however, if you do make emergency transmission on frequences other than the ham bands, like police frequenceys, you had better be in dire straits.

That is quite wrong. Just read the words:

S 97.405 Station in distress.
(a) No provision of these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its condition and location, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a), of any means of radiocommunications at its disposal to assist a station in distress.

So where do you find any words which say that anyone may do anything in particular? This rule is just a kind of cover-your-arse set of words for the benefit of the FCC, and all they say is that in an emergency you can't blame the FCC or hold them responsible for your inability to summon assistance. But from any plain reading of the wording, the rule clearly gives no permissions of any kind to anyone.

Taken a step further, if you do summon help and the FCC objects, then under this rule their objection can not be that you violated Part 97. However other CFR's still allow them to charge you with the unlicensed use of radio transmitting equipment etc. Not all FCC actions need to be taken under Part 97, even against amateurs.

Regards,

: any area or subject I've ever had to take a test on.

I have, and they were college classes. The modules had to be absolutely correct. If not, you took a new module, covering the same material. The grade depended on the number of modules passed.

: Additionally, it is a step backwards to require perfect copy
: because the knowledge of CW has no current relavence to being
: a ham that would or should require such exactness.

Maybe, maybe not. There are long and loud claims both ways. I am not convinced that there would never be an instance where CW was the only way that communication could be accomplished - but I also believe that being able to copy at a high rate is unnecessary. I WOULD like to see a return to requiring a solid 1 minute copy, as whatever speed was chosed for the various licenses.

Are you reading the same message I am??
>No provision of these rules prevents the use by an amateur station
>in distress of any means at its disposal
means to me, if you are in distress, then you cans use any means at your
disposal, i.e. any frequency you want!!

>No provision of these rules prevents the use by a station, in the
>exceptional circumstances described in paragraph (a), of any means of
>radiocommunications at its disposal to assist a station in distress.
And if you are out of band, and hear someone calling in distress, you can
answer them, help them, etc. on that frequency.

Sorry, but I totally disagree with you on this point. It is clear to me
that the intended use of this clause is emergency traffic and it's
possible use out of band. I will have to go through my question pool
again, but beleive this was included in there somewhere.

>action ....

Once again, the "Carl Stevenson Fact Train" (choo, choo...) attempts
to stereotype all people who like to "chase DX" as ill-mannered.
Of course, since Carl Stevenson doesn't use HF SSB or CW in the
'dx sub-bands', I guess we can't expect anything less from him.

>> Which means if you aren't a member, you have no say.
>
>Hell, even if you *are* a "member" you have no say ... the

>Sometimes it's more polite and subtle than that, sometimes not,
>but the *meaning* is always the same ...

If Carl Stevenson is so concerned about what Board members say to
members, one has to wonder why Carl Stevenson doesn't run for an
ARRL field position. The true answer to this question is Carl
Stevenson is much more content sitting around and whining/bitching
about things, rather than attempting to take a proactive role in
changing what he perceives to be a wrong. Its much easier for Carl
Stevenson to sit around on his butt to type on the keyboard.

>> With the popularity of the Tech license these days, if more Techs
>> would join ARRL I think you might just see some more changes in the

>The fogies are so entrenched (not to mention the bureaucrats in
>the staff) that there will be tremendous resistance, even sabotage,
>to any attempt to "take over the ARRL from within."

Carl Stevenson talks a good game, but when you ask him when you
can expect to see him start this new organization, you will get a
blank stare.... All talk, no action.

>requirement ...

Right... And you have to get 100% of that 76% correct on a theory test,
or you fail that too... So it isn't a 76% passing grade, it is really a
100% passing grade. HOW UNFAIR!

>It's sort of like the code test vs. everything else ... in the
>current system, one can choose to ignore, say RTTY, on
>the written test and still pass, but ignoring the code portion
>will preclude one from obtaining a license ...

Ignoring anything has the effective result of forcing you to score
a higher percentage on the remaining questions to compensate for
that which you ignore, so you can still "pass". This is clearly
unfair, since if I choose to ignore, say, RTTY, I might have to
score 80% on the remaining questions to still achieve an overall
76% to pass. This is blatent discrimination and needs to be
changed.

>The proposal to revert to "solid copy" is just another attempt
>on the part of the pro-code Luddites at the ARRL to maintiain
>Morse as the dominant determiner of ham priveleges ...

I thought it was an attempt to ensure people actually >know< how
to receive and send code, rather than merely guessing correct on
7-out-of-10. Silly me, thinking we should require people to know
things.

Someone said:

>Bodies do add up to votes and money, but the minimum figure that's
>significant on a national level is on the order of 5 million bodies and
>$100 million dollars.

that sounds good, but it doesn't fit the knkown reality. A national
case may well be decided by one senator making one trade with
one rep. if they feel the subject of the trade is unpowered hams,
then we are traded off.

If either of the congresspeople (Look up congress in O.E.D) feel
that ONE of their constituents is an able political activist and will
turn on him/her for harmong ham radio, then ham radio will nnot
be a pawn on the board.

Case in point: I once felt that I owed a congersman a small debt,
and volunteered to work for his re-election. They made me preceinct
chairman because I was the only vol they had in the prct.

It didn't matter; the prct was lost to them anyway. He was an
old hand and had NEVER gotten more than 30% of the vote
in that prct.

BUT, I, one lone person, gave him 55% of the vote in that prct.

Ten men like me could have vol'd for the enemy and blown this
congressperson or conger or eel for short, right out of the water.

Ten people. NOT a million, and not over 100 dollars. NOT a
hundred million.

Sheeeeesh.

The stuff that gets spouted for authority these days.
It is as bad as ever.

In our crowd, we use several benchmarks to show new computerists
the divfference, and win stuff is always slower.

You know the difference between windows and a virus?

A virus does something.

The difference between running windows and shutting down your comp?

Shutting down your comp saves electricity.

One day God decided he was tired of it, and was going to end it all.
He called sai three important people talking, and called them to Him
and said You are some of the ost important people on Earth, so I
called you here to tell you I will end it in seven days." Then He sent
them back to Earth.

Bill clinton called a press conference.
I have good and bad news, he said.
Good news is God really exists. Bad news is he's gonna end the world
in 7 days.

Boris Yeltsin called a TASS conference.
I have bad news and worse news, he said.
Bad news is God really exists. Worse news is he's gonna end it for us
in 7 days.

Bill Gates called a staff conference.
I have good news and great news, he said.
Good news is God thinks I'm one of the most omportant people on Earth.
Great news is we don't have to worry about those bugs in Windows
anymore.

Ciao.

PHOTO PHOENIX INTERNATIONAL

We are an international New York based agency representing
amateur and professional photographers in the following areas: Galleries,
Business and Organizations, Book Publishers, Paper Products, Consumer
Publication, Newspapers & Newsletters Publication, Special Interest Publication,
and Trade Publication.
We are seeking photographers who strive for excellence in the aesthetic/
creative and technological world of images, who have the talent to capture
the setting and to convey the mood. Your work should reflect a genuine,
pervasive interest in photography as a fine art.
Whether your work portrays conservative, experimental, stylish, or innovative
themes, your project proposal should be well thought out before submitting to
us.
For first contact, please submit a query letter, direct mail flier/brochure,
tearsheets, slides, photographs & SASE.
For amateur photographers, send sample photos and/or slides.
TO ALL: Do not send entire portfolio unless we ask for it. If we are not interested,
you might not hear from us, so please submit material that does not need to be
returned.

Send to:

I was inactive from the time I got my first license in 1935 (yes, '35) until 1989 when I started up the chain by taking tech, then advanced and finally extra with the use of ARRL manuals. I looked at everything else and decided that the ARRL series was the best material out there. Read the text and understand as much as you can. Then practice the questions until you can answer them in your sleep. Try to understand the answers, and for those that you don't quite get or don't want to risk calculating the wrong answer when under test pressure, just memorize the answers. It worked for me at age 72. Try it. I got a grade of 100!!! Hal, W9UYA

Know what? I just love it when people like you post such sarcastic
messages, and it turns out they aren't informed enouigh to know what
they are talking about. It makes you look like you just talk to hear
yourself.

It's the FCC that has the requirement for code here in the USA, not the
ARRL.
And they have that requirement because they *have to* have it. There are
international treaties that require it. Until those treaties are
dropped, the requirements will stay.

Actually I have changed my idea to:

"The maximum morse code speed testing requirement for general access
(phone, digital, etc modes) to any band below 30 mhz shall be 5 wpm.
Individual countries may test at higher morse code speeds for access
to selected CW sub-bands within their country."

Strategic Air Command Memorial Amateur Radio Club

K0AIR/K0GRL

Charter Meeting: Wednesday, June 25, 1997, 7:30 PM

Bank of Bellevue, Galvin and Harvell Rds., Bellevue, Nebraska

A new SAC-related organization is forming in Bellevue (near Offutt AFB). It is the Strategic Air Command (SAC) Memorial ARC. It is a collaboration among active-duty personnel, veterans, members of the local amateur radio community (including the Bellevue Amateur Radio Club), and members of SAC-related historical organizations. Its purpose is to preserve USAF and SAC communications and amateur radio history, such as via the preservation and use of historic callsigns (K0AIR/K0GRL), and working with the SAC Museum to put together communications history exhibits (See May QST, Page 43 for an excellent article, independent of our efforts, by Dr. Charles Keene on the subject of SAC communications history.) We also consider our fellow active-duty personnel and veterans excellent potential recruits for amateur radio, and hope our efforts will attract them in larger numbers.

All interested parties are welcome to attend our charter meeting. We've existed informally as a club (within FCC regulations) for about 6 months now, but would like to proceed more formally, possibly by incorporating as a non-profit organization. The meeting agenda includes ratification of our Articles and By-Laws, the election of officers, and planning of future projects. All positions (especially Secretary and Treasurer) will likely be wide-open and all qualified candidates are strongly encouraged to run for any office. Dues for membership will be only $5/year, and future meetings will be quarterly (last Wednesday of December, March, June, and September).

For more information, contact Paul Schleck at (402) 291-6176 or pschleck@novia.net, or check out our WWW Home Page at:

http://www.novia.net/~pschleck/sacmarc/

If you are unable to attend this meeting (such as because you live too far away), but are still interested in membership, you may request membership information by sending a business-sized, self-addressed, stamped envelope to SACMARC, P.O. Box 1292, Bellevue, NE 68005-1292 (Details such as dues, membership applications, and membership terms are not likely to be finalized until the June 25th meeting, so please do not send money or applications for membership at this time.)

RED HERRING ALERT!!!!!

Howard,

NONE of us who advocate elimination of the Morse hazing ritual
advocate any of the other deficiencies that you lump in there in
an attempt to equate things with "CB."

In fact, virtually ALL of us are in favor of fixing the written tests
to eliminate the entry of technically incompetent people into
ham radio (sort of a "back to the roots/purpose" movement,
if you will).

In short, you are WAY off base when you try to imply that we
who advocate eliminating the code tests are also saying "fling
open the doors, eliminate all requirements, and let any idiot who
wants to to 'come on down' " ... nothing could be farther from the
truth. We are not in favor of a continued "dumbing down" of ham
radio ... that's why we want to eliminate the Morse hazing ritual
as "the measure of a ham" and fix the written tests so that having
passed onehas some meaning ...

> ADDRESS IS . . .

er, excuse me but even us anti-code-test folks know that the
correct meaning of "QTH" is "What is your LOCATION???"
when used in the interrogatory and "My LOCATION is ___"
when used in the affirmative ... (check your Handbook if
you're unwilling to trust the word of a lowly no-code-tester)

I guess you spent far too much time trying to condition your
poor wetware to act as a crappy modem and not nearly enough
time learning about the operational and technical aspects of
being a ham ...

Apparently you failed to grasp the significance of the fact that the PRB chief made that statement 12 years before 220 MHz was reallocated. Are you suggesting that he was psychic? Or perhaps, are you suggesting that it was part of some decades long Illuminati conspiracy?

Well, many of them have loud signals, and they know how to crush
a pileup, but how many of them have developed expertise in cooperatively
handling real message content? Certainly none of their Dxing activities
serve as practice for those essential skills since no real content is involved
in those contacts.

What training has contesting given them in knowing when to shut up so that
higher priority traffic can be passed? Contests aren't won by those who step
back and let their competition have first crack. Dxers may have a slight bit
of skill here. They've learned that if they don't follow the Dx's instructions
they might not find themselves in his log when the Dxpedition is over. But
too often they've learned that if they make themselves obnoxious enough,
the Dx will work them just to get them out of his hair. That sort of disruptive
behavior is totally out of place on an emergency net.

What training has Dxing given them in knowing when it is more efficient to
ask for a relay rather than straining to pass the message direct? Utilizing a
relay is unsporting in their activity. It's a totally alien concept which goes against
every ingrained habit that they've developed. Perhaps the growing use of list
operation may be changing this. Many times the list station is defacto acting
as a relay operator for the Dxer.

They may have experience operating a radio, but do they have any experience
handling message traffic? That's the key question.

It has been my experience that I can sit someone down and show them
how to use a radio in a few minutes, but if they don't have traffic handling
experience, it can take a long time to get them to be useful to the agencies
we are supporting, regardless of if they've been at the top of the DXCC list
for decades. Most of the competitive skills the Dxer and contester have
developed are out of place in a cooperative message handling situation.

Now I've known contesters and Dxers who have also done traffic handling,
and they can be very useful if they can remember which skill sets to use
in the situation (I've seen them slip into Dxer mode too many times, however).
But I've found that people who have experience in traffic handling have much
more valuable skills than those who've only contested or chased Dx. They
know through and through that the content is the thing, not the contact.

That's totally backwards to the mindset of the Dxer or contester whose sole aim in life is just to make the contact.

I'll take someone whose training is to get the message *right* over someone whose training is to be the *first* to get the contact every time. Their priorities are in the right place for emergency and disaster communications.

Yeah, we're not talking about busting pileups or pulling the weak one
out of the noise for the vast majority of public service and disaster
communications. We're talking about knowing how to correctly
deliver the message in a cooperative network of stations.

That's one reason I think Field Day is a joke as an emergency
preparedness operating event. The emphasis is on maintaining
a high rate of contacts. If you miss one, no sweat, there are a
dozen more to be picked up, so don't waste your time trying to
complete a difficult exchange.

But in a real emergency operating situation, getting that message
through correctly, even if it takes a while or requires a relay, is priority
one. Just because there will be other messages to handle doesn't
mean you can slough one off. That message may have someone's
life depending on it. Get it right, don't worry about running up a count.

And during Field Day, if you can bull your way into dominating a
frequency, you can run up a high score. But in a real emergency
communcations situation, the *other guy's message* may be
more important than yours, and you need to learn to let him have
the channel. Help *him* get the message through, even if it slows
your QTC.

> high power amplifiers and large directional antenna structures.

Once again, someone expressing the view that "the scores" are
the "important" part ... is that *really* the message you meant to
convey, Paul ??? If so, I am disappointed ... I had expected more
high-minded attitudes from you, based on some of the comments
you've made WRT networking issues ... I hope I am reading you
wrong on this ...

I for one, would be quite happy with a 100W power limit on HF ...
I can't forsee ever *needing* to run more power than that, because
I would never be in the position of needing/wanting to stomp others
into oblivion to "make the contact" ... those sorts of competitive
DXing and contesting are, to me, gross perversions of haming
that don't merit my time or attention. That so many hold them out
as "the essence of haming" is sad ...

> >What's the intent of excluding an entry license from EME?
>
> If someone manage to operate EME with 10-100 W, then by all means
> operate. However, I have heard of exactly one EME QSO worked with a
> solid state amplifier (about 10 - 20 W), but that was on 10 GHz with a
> big dish.

The only valid, rational reasons for limiting power for the entry level class are safety and interference concerns ... current no-code tech tests do not, IMHO as an RF engineer with over 25 years in the field, require demonstration of a level of knowledge sufficent to justify a 1500W PEP limit ... this is one of the aspects of our license system that very much needs fixing ...

> >I can see limiting the use to commercial equipment, but once
> >that is accepted, I can't see how anything about the type of operation
> >should be precluded as long as the entry level license holder
> >is operating within frequency and power constraints.

Limiting use to commercial equipment is akin to establishing a "CB-like" license class ... purely operators with no technical skills or interests. That is EXACTLY the WRONG direction to be taking ... we need to re-emphasize our technical goals and purpose, not continue the move away from technical competence that started in the 60s with the ARRL's "Incentive (to pass faster and faster Morse tests) Licensing" scheme ...

Bill (to quote you...),

Know what? I just love it when people like you post such sarcastic
messages, and it turns out they aren't informed enouigh to know what
they are talking about. It makes you look like you just talk to hear
yourself.

> It's the FCC that has the requirement for code here in the USA, not the
> ARRL.

The FCC would have dropped or drastically changed the code "requirements"
years ago had the ARRL not protested so vehemently ...

> And they have that requirement because they *have to* have it. There are
> international treaties that require it. Until those treaties are
> dropped, the requirements will stay.

The treaty requirements can be "excepted" by national administrations
(Japan and others have done so ... Poland recently joined the crowd,
according to a recent announcement) ...

Additionally, the treaty specifies NO minimum speed requirement ...
a 1 character per week speed limit would meet the requirements ...

This is just more typical pro-code excuses for maintaining antiquated
"requirements" ... nothing more ...

Checkout the Excide Marine series of charges, they are cheap and do as
they are intended to do. Visit your nearby KRAGEN Auto Parts for a
display of the various models. Used 'em for years w/o any problems

Great if it's relevant to the job. But I would advise finding out what the licences are actually useful for before spending the time to study for and pass any of them.

The licence that qualifies you as a radio operator on a seagoing ship isn't very useful if you aren't ever going to be working on a ship.

The only thing to watch for is that most UPSs are designed for full power
only as long as their batteries last. The transformer and/or power bridge
may overheat if run on external DC power.

You will have to derate the max continuous output power.

What all this crap means is some people are just too damn LAZY to learn the code! Since they don't want to take the time or effort to learn it, they want the requirement changed to make it easier for them. AND, to set the record straight, CW is one of the more efficient modes, both in bandwidth and power requirements. Try digital communications on 100 milliwatts...it'll get you nowhere. Just so those who oppose the CW requirements don't think I'm an old CW person that believes in exclusivity, I hate CW. BUT, those are the requirements, and I think they should stand.

Thanks to the ARRL, the U.S. Amateurs will be the last on the face of
the earth to be rid of that ridiculous code requirement. It will
probably be about a hundred years after the rest of the planet drops
it.

Hi, I have the Yaesu FRG-7000 communications receiver for sale. Unit is in mint condition with manual. Covers the band from 0.25-29.9MHz. Has large LED read out, GMT/local clock with timers. LSB/USB/AM/AM-ANL/CW. Works perfect, a classic. $200.00 and I pay UPS fees and insurance anywhere in the USA! Jim KD6CCP

service?
>Obviously it can't.

OK, you are an ADVANCED class operator. By any means at your disposal
means you have access to the EXTRA portion of the bands, now doesn't it???
And a tech plus has the SAME access, doesn't he??
Well it seems to me, that those frequencies would definitely BE AT HIS
DISPOSAL!!

I won't get into the childish name calling and the obvious "12th grade"
English class bull that you would be so open for after reading the below:

Goto http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html
Check out the following two questions in the NOVICE question pool:

N1J08 Q: If you hear a voice distress signal on a frequency outside of
your
license privileges, what are you allowed to do to help the
station
in distress?

A: You are allowed to help on a frequency outside your
privileges
in any way possible.

N1J11 Q: When you may you send a distress signal on any frequency?

A: In a life - or property - threatening emergency.

>> Sorry, but I totally disagree with you on this point. It is clear to me
>> that the intended use of this clause is emergency traffic and it's
>> possible use out of band. I will have to go through my question pool
>> again, but beleive this was included in there somewhere.

Yes... I will try to take 12 WPM test directly. If you get 60% (45
mistakes) or above on 12WPM, I think you can get 5WPM qualification
automatically. I understand that you need 100% (5 mistakes or less)
for 12 WPM.

I thought it would be a good idea for me to pass those tests in my
future career.
I don't know what kind of job I am going to get, but it is not bad
idea to have a radio operator's First Class certificate, for
example... You can either write about it on your resume or use it
for the actual job.

It's not name calling. The FCC regulations are deliberately written
in plain high-school level English, and their meaning is intended not
to be obscured by legal jargon and technicalities.

> A: In a life - or property - threatening emergency.

Yes I read the pool answers you gave and indeed your recollection was
entirely accurate. The problem is that those answers lack any
support in the text of Part 97. All I can offer in rebuttal is the
question of why, if the FCC had intended to permit help out of band,
they did not say it in the rules? They recite many permissions that
the license grants the holder and that permission is simply not there.

Our operations are governed by the Commission's Rules for Amateur
Radio (CFR 47 Part 97) and not by the approved answers to the pool of
exam questions. Maybe a representative of one of the VEC's which
participated in the preparation or acceptance of those questions will
attempt to defend them here. They seems indefensible to me.

After seeing your quote I found the Novice pool on the ARRL's web
server and when I looked through it I found this other one:

N9B09 (C)

If the ends of a half-wave dipole antenna point east and west,
which way would the antenna send out radio energy?

A. Equally in all directions
B. Mostly up and down
C. Mostly north and south
D. Mostly east and west

If you believe that these pool questions and answers are well written and to be relied on, maybe you can explain why answer C is superior to answer B. And are the electromagnetic waves from that dipole required to obey the laws of physics or the pool answers :-)

If you read back through this thread since its start you will read of cases of successful enforcement action by both the FCC and by local law enforcement against licensed operators who acted as you believe is allowed, and as the Novice Pool unfortunately apparently encourages. Those enforcement actions simply could never have succeeded if the respondents/defendants in those examples really had FCC permission to operate in that manner.

As history has repeatedly shown, if you choose to operate according to the way that you read the rules and as those examples in the Novice Pool appear to offer support, you're at risk of having your equipment confiscated or even worse.

Nope. Are you one of the no code advocates who leaves out half of the
previous message in order to make an argument sound better ?

> Demonstrating to the government that you Know the Holy Code allows
>one to enter the Temple of the Holy HF, the Lower Bands Lodge Hall
>where only the Good and True amateurs reside.

>quote from Len Anderson

As I said in the email response to the email you sent me, Butch, if you think
anything that Len Anderson has to say is quotable, I can understand why you
enjoy a little Masa bashing.....

This discussion, Butch, wasn't about code. This was about someone picking
on Masa because they were too stupid to look his callsign up. Code was
never mentioned. But, like so many other people here who have a problem
with code, you want to turn it into the classic code/no code discussion.
I got my extra class license long before I knew it would bother you and Lenny.
When I passed the code test, Butch, I wan't even thinking about you. Don't
take it so personally.....

As many 'keep the code' and 'kill the code' threads as there are here, Butch,
I don't know why you picked the discussion about Masa's license or lack of
one to discuss who knows code and who doesn't. What the hell has that
got to do with the fact that Eric can't figure out how to look Masa up in a
callbook server on the internet ?

But, we'll turn it, for your benefit, into the usual junk. So I guess you have a
problem with code, too, right Butch ? Whats your excuse ? Dislexic ? Left
brain disorder ? Right brain disorder ? No brain disorder ? Mother drop you on
your head when you were a baby ? Can't think and write at the same time ? Too
busy ? Code is antiquated, and you're modern ? Coast Guard does't use it

anymore ? It's a hazing ritual ? So happy on the VHF repeater you don't need HF ? Why does it bother you that somebody else passed the test ? Do you think that anyone who passed a code test did it just to piss you off because you can't ? Can't stand the idea that other people have privledges that you don't ? Should everyone have the same class ham ticket, the same type radio, the same type antenna ? Make it 'fairer' that way ? Maybe we should all move to China ?

Tell us, Butch, what is YOUR problem ? Maybe all the collective brain power here can solve YOUR problem and at the same time make the world a better place for everybody who ever wanted a ham ticket and couldn't get one.....

73, Jim KH2D

It is a pain in the butt mostly, but can be done with a thin, sharp edge to pry open the edges. I just saw, I think on this group, someone suggesting you stick the battery in the freezer and then bring it out frozen and smack it on a surface to break the glue that Yaesu uses to prevent us from reusing the case (silly Yaesu, they even put it over the batteries sometimes making it very difficult for us with no benefit that I can see....). Check the archives of this list.

I just pry them open, but it can take a half hour or more to do it neatly.

I can say with certainty that if those who sought to "take over ARRL from within" voted in 15 directors with their viewpoints, the Newington staff would not sabotage the new policies of new Board. :-)

The easiest "solution" may be to say "Don't try; it won't work," but I don't think that I have seen that to the the effective course of action very often. I have generally found that one must put a lot more effort into making change happen than into saying why nothing will ever change, but that the hard work eventually results in some degree or another of success.

And I note that there was no digital operation, either. Nothing about 10
milliwatts or 10 Mbps, either. :-)

You *obviously* don't operate 75m, Jeff. Nearly everyone there welded their tuning dials years ago. :-)

And to a large extent, with the exception of the contest bandits, much the same can be said for 40m or 20m. The same groups congregate on the same frequencies every day.

This is a very strange interpretation of plain language.

For what purpose do you think the FCC needs to CYA in such instances?

The section says what it says and most folk who have letitimate need to
use it and can read it will probably interpret it appropriately.

and all they say is that in
> an emergency you can't blame the FCC or

hold them responsible for
> your inability to summon assistance.

The FCC is a representative part of a sovereign nation called the United
States of America. As such, one must have a sovereign's permission to
sue it. Again, from what do you think the FCC must protect itself?

But from any plain reading of
> the wording, the rule clearly gives no permissions of any kind to
> anyone.

How would you have the rules' writers write such regulations? Would you
have them specifiy with what equipment, at what power levels, a what
time such calls may be made, and what class of operator may make them on
and on what frequencies such calls can be made? I hope not.

The plain language does not prohibit you from doing whatever is necessary to make communications in emergencies. I've done it and so reported my actions post facto to the FCC monitoring stations where I was congratulated for doing what I did.

> Taken a step further, if you do summon help and the FCC objects, then
> under this rule their objection can not be that you violated Part

In article <3398df31.142137524@news.atl.bellsouth.net>,
Gary Coffman <ke4zv@bellsouth.net> again argued that calculus is a necessary
facility prior to becoming ham:

>>Morse code, basketball, bass solos, and now - the calculus. Some demand
>>Morse code, some demand the calculus. Morse code, the calculus - your
>>intent must be to provide a complimentary rail for us to bang against.

>Not at all. As I stated below, a rudimentary grasp of the principles of the calculus
>is a critical basic skill.

Let me state it another way then: You are effectively providing a
complimentary rail for us to bang against. It is anti-constructive to
the issue at hand.

>In any science or engineering discipline,
>one of the most essential mental tools is the ability to assign a number
>to a phenomina. As John McCarthy says, "If you can't assign it a meaningful
>number, you don't understand it." For many of the electrical phenomina
>with which amateurs work, the ability to assign a number requires at least
>a rudimentary grasp of the principles of the calculus.

More often than not, an amateur need only apply the number - not assign the
number.

>I'm well aware that it is a license to learn. But like gaining entry to any
>laboratory course, there are certain prerequisites which need to be
>met. I'm insisting that one of those prerequisites is a grasp of mathematics
>beyond the 1+1=2 level.

Absolutely! Exactly what I am saying. However you are holding the bar
much higher than that - higher than is practical for the majority of
amateur radio work; higher than is necessary as an entrance requirement.

>>Ever hear of an R/C time constant? Please, what can you tell us about
>>their common use as constants?

>First of all I'd note that they aren't constants.

That's profound.

>Why don't you tell us how to use a time constant to evaluate the peak and
>average energy dumps in an RC network as a function of time.

How about I just tell you how the circuit works as a function of
frequency? Seems to be good enough for the RIAA.

>>Are you fusing the primary AC, or the DC supply? For the primary, I'll
>>need more info on the transformer. Of course, one must bear in mind that
>>one can only purchase fuses that have at most 2 significant figures, so
>>PRECISION TO FOUR DECIMAL PLACES IS A LITTLE LUDICROUS!! Besides, the
>>ratio between the instantaneous peak current and the sustained current
>>ratings of a slo-blo fuse is fixed. One therefore has to choose a fuse
>>which will not blow under normal inrush current, but will blow when normal
>>sustained current is exceeded (by greater than some amount, plus or
>>minus). The choice is simply among the best available compromise values -
>>less need for precision, yet again.

>You seem to be ducking. I haven't asked you for an answer to 4 significant digits.
>I've given you enough information to calculate the peak and average inrush. Will
>additional inrush limiting be needed here? A simple yes or no will suffice.

No. I can put in the correct fuse without using calculus. I happen to
know that current flows into the caps at an exponential rate. And I
don't happen to be interested in solving your problem for you just to
satisfy your rather substantial ego.

>>Your last reply also reported on my alleged "confusion", an approach you
>>happen to share with Vince Biancomano. I think you take me for a fool Gary,
>>and I don't appreciate your continuing to make these arrogant, patronizing
>>remarks to me in post after post. For someone with such great faculties
>>at his disposal, you display a profound degree of confusion when it comes
>>to "differentiating" real from imaginary, and more to the point - practical
>>from the ideal.

>I'm sorry you feel that way.

I suspect you are being insincere.

>However, you were changing the subject to cookbook >mechanizations, not a
grasp of the fundamental ideas behind those mechanizations.

Nope. Just trying to characterize amateur radio a little more
realistically than you have been.

>The fundamental ideas of the calculus are really quite simple, and need not be cloaked
>in lots of formalism to be understood. In fact many people have an intuitive grasp of
>those ideas who have never taken a formal calculus course. Memorizing a bunch
>of cookbook integration mechanizations is *not* what I've been talking about. If you
>think it is, then you *are* confused.

I don't think it is. Please tell us which way you feel it is: people
should understand calculus as a condition of licensure, or, people should
think they understand calculus as a condition of licensure?

You seem to be fond of exercises, please cite an example from the current
exam pool in which the application of either a differentiation or an
integration would be a natural extension - and, should be required of all
amateurs prior to acquiring a license. Then explain what precident would
dictate such a requirement.

>I don't think that's my fault. I've tried very hard
>to clearly state that I'm not talking about formalisms or cookbook here.

I really don't know where you came up with this cookbook idea - I certainly did not introduce it, unless you consider reference texts to be "cookbooks".

>But in the real world, it is linear change which is the special case. Just
>as the circle is a special case of the family of curves called ellipses,
>linear behavior in electronic systems (or other physical systems) is
>the exception rather than the rule. In electronics, it is often the *desired*
>exception, of course, but if you aren't equipped to deal with the non-linear
>case, how can you hope to approach the special case of linearity?

If we were to take all this as seriously as you, then we would have to conclude that we can no longer construct our dipole antennas using accepted constants, but must instead accurately model the conductor from first principles in each case. It may be useful to be able to do this - but as a skill, it needn't be manditory for everyone entering the service.

>I would note that in reading Feynman's lecture series I did not find him
>as reticient to use mathematics, including the calculus, as you have
>indicated. What he did do is avoid the unnecessary formalisms beloved
>by the pure mathematicians, and what he did do is relate the math to
>the physical systems in a concrete way. I support that idea wholeheartedly.

While Dr. Feynman was never reticent to use mathematics, he was not dependent upon it to illustrate his point. Since you are familiar with his works, then you are aware of his unique ability to convey abstract ideas by analogy to more common, readily observable phenomenon.

>And while Dr. Asimov was an esteemed science popularizer, I don't think
>his efforts are exhaustively indicative of the sort of knowledge needed to
>function in a technical field.

Nice put down. I'm sure Dr. Asimov couldn't care less what you think of his work. His text is to physics what amateur radio is to engineering. The field of amateur radio is but a subset of the field of radio engineering, and as such has a more limited set of requirements. The word "amateur" should not be forgotten here Gary. I use ham radio as a diversion from my work, not as an extension of it.

>>The majority of basic Newtonian mechanics problems can indeed be solved
>>with algebra and trig - the same holds true for amateur radio related
>>electronics problems. I'll not let you have the last word on this point
>>Gary, unless it is capitulatory in nature. ;-)

In regard to Newtonian mechanics problems, it might >be useful to remember who it was who found it necessary to invent the calculus to >solve the general class of problems in mechanics.

How clever. Yes, the proof and derivation of Newton's laws of mechanics required him to invent the calculus. How useful that is to remember in a ham radio newsgroup is less than obvious, except perhaps as a rhetorical

construct. He managed to save the introductory physics student a lot of work. An understanding of the implications of his derivations does not depend on a facility with the tools he used in making the derivation. That is at least part of the reason why his relations are so elegant.

I guess our disagreement stems basically from a difference in perception. You evidently view amateur radio as a discipline which demands that each operator have the ability to employ RF engineering theory in his every day operations. On the other hand I believe that amateurs need only to employ standard radio practice. I believe we are, on average, tradesmen/practicioners rather than journeymen/engineers. That some are considerably more, is sufficient to continue to advance the state of the radio art. Thanks for any part you might continue to play in that. But please recognize there's more to communication than Faraday fields, and that calculus does not make or break a good ham operator.

73,

AC6XG

>encourages. Those enforcement actions simply could never have
>succeeded if the respondents/defendants in those examples really had
>FCC permission to operate in that manner.

I read back through the thread, and in fact, answered at the beginning, if
you also read through the thread there were several cases in which there
were people NOT prosecuted. These were the ones that had no other means
of contact available, and therefore were using the airwaves in an actual
emergency.
The ones that were prosecuted had other means of communications available,
and therefore it was NOT an emergency.

I have had enough of this drivel, you asked, I showed you where you were
wrong. The questions from the question pool are not made up out of thin
air, but ARE the rules and regulations, and by the way:

>If the ends of a half-wave dipole antenna point east and west,
>which way would the antenna send out radio energy?

>A. Equally in all directions
>B. Mostly up and down
>C. Mostly north and south
>D. Mostly east and west
>-------------------------------------

>If you believe that these pool questions and answers are well
>written and to be relied on, maybe you can explain why answer C is
>superior to answer B.

answer B, up and down, is valid only for the distance in which the antenna
is mounted above the ground. Then the down wave is either absorbed or
reflected.
The USEABLE protion of the wave is north and south, but then again, I
don't know why I am explaining this to you, this is just another arguement
you want to start.
1) I made the original statement
2) you called me wrong
3) I disputed the claim
4) You started the name calling, and suggested I sue my teacher (Duh!)
5) I prove you wrong- by question pool, the OPERATING PROCEDURES

6) Now you want to attack the entire question pool as wrong.

Go ahead and make any other further comments, I will no longer answer as I tire of this as I tire of the CODE vs NO CODE threads.

Too bad you cannot accept facts when you are proved otherwise. join an emergency Management Team and learn the REAL facts.

And to all the amateurs here: be assured: In a REAL emergency, when no other means of communications is available, use whatever means available to help or get help. Lives may depend on it, even of the caller is W2tg, an extra on extra bands needing help and you are a tech scanning the bands. I am sure he would change his mind then, and would WANT your help!

The Ham Radio & More Show has changed formats. It will be available
LIVE exclusively on shortwave broadcast station WWCR, 5.070mhz, at
2200utc (top of the hour start, no newscast), Sundays. It will also
rebroadcast on WWCR every Tuesday at 0800utc on 3.210mhz, AND every
Sunday at 0500utc on 5.070mhz.
The format will change slightly with FEWER commercial interruptions.
Guest lineup: 6-15-97 Army MARS
6-22-97 Weak Signal VHF work
6-29-97 SETI
I am currently looking for suggestions of topics on upcoming shows.
Also looking for new sponsors at GREATLY reduced rates.
Give us a listen and visit our web page...info below.

I don't know of *any* EMS activities *local or not* that use Morse code
any more ... it's too damned slow, awkward, and error-prone ...

> "Modern EMS operations"??? Voice comm is as old as CW* (both came into
> existance around 1921).

Morse code was invented, I believe, in 1847 ... well before the telephone ...

In fact, when the telphone was new, the CEO of Western Union was quoted
as saying "That telephone wil never succeed ... it's of no use ... we have
no shortage of messenger boys to deliver telegrams ..."

I am sure that Jeff and the pro-coders would have strongly agreed with
him ... probably still do ...

The argument here is really over MORSE code ... not just the
radio transmission thereof ...

Confiscated by whom? The FCC? Sheesh. Blatent abusers do not get prosecuted. What makes you think someone using their equipment in an emergency would get prosecuted. What evidence do you have to support your statement and what repeated history are you talking about?

Try a little common sense.

This coming Sunday..

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
June 15th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

OhWell,,, I gotta agree with Carl on this one. Ace sells a switch harness with a locking toggle switch for the rf deck which swapped the whole rf assy. Am to FM, 50mhz to whatever. Just never seemed like a good plan to me, heck, I can't even keep my trims in the right place during a flight!

Putting the switch in the battery compartment or something might not be bad, but it's still the tx control thing. I'd feel a bunch better having both freq pins even if I'm not planning to use the other freq. I don't do it now, even though I have all the parts to modify my Silver Seven gear. Also,,, if Darvell figgured out how to get a one by two call sign, he's just trolling, if he doesn't have a real call sign, he's just trolling. I guess it could be a legit question... If so, give me an email Darvell, and accept my apologies, and I'll discuss the issue with you.

Zack, lead-acid deep cycle batteries occasionally need a so-called
equalizing charge, which is about 0.6 Volts higher (for a 12 Volt
battery) than the float charge. They also want to be charged by a
constant-voltage source. Make sure the charger you get can do this
stuff. See W4MLE's series in QST for March, April and May 1990,
especially the May installment.

I've run my home station and the Field Day operation I participate in
with a homebrew 10 Amp charger and a 100 AH deep cycle battery. The
battery is now about 5 years old, and shows no signs of aging. About
twice a year it gets an equalizing charge.

You're not too bright, are you?

>>I wonder how hams manage to make random contacts on two meters without
>>using "CQ?"
>
>You need to explore the difference between HF and VHF operating. On

I understand the difference. I also understand someone who keeps
raising side issues and nitpicking in an attempt to obfuscate the fact
that he's losing the argument.

>>And you might read for comprehension, and avoid embarrassment.
>
>Shouldn't that read "... to avoid embarrassment"? (No comma.)

Possibly. Want to argue grammar now? You sure can't argue ham radio.

>Anyway, you're just mad because you now realize prosigns such
>as CQ and 73 which you've undoubtly used violate your own call
>for plain English on voice.
>
>73 es gl om,
>Jeff KH2PZ / KH7

All I did in the beginning of this discussion was to point out that it
was pretty stupid to use a three-syllable pro-sign when a much
clearer, shorter and more understandable alternative was available by
using plain English. I also said that plain English was generally
better than using CW and jargon when communicating in voice. I stand
by those statements, which you haven't even addressed, much less
refuted.

Nowhere did I say or imply that in certain specialized circumstances
(such as calling "CQ" on HF) that using CW or prosigns should not be
allowed.

Sheesh! Some people! You aren't one of those lids who spells out
"H-I, H-I" every so often on two meters, just to fill in while he's
attempting to think, are you? Even saying "high, high" instead of
laughing is bad enough. Or are you one of those nitwits who types
"es" instead of "and" when writing? Do you say "CQ 20, CQ 20" when
you're on twenty meters, as if you were going to attract replies on 15
meters? Do you understand what I'm saying here, Ten Four? Or shall I
Ten Nine?

Seventy Thirds, Good Buddy. See you on the flip side. Keep the
rubber side down and the shiny side up. I'm Ten Seven.

Greetings from little old New Zealand !
I have been reading with interest the comments about "Hobby or Service". I am one of the leaders of the Amateur Radio Emergency Communications group in New Zealand. We are tasked to advise and assist the Police on Emergency Communications especially for Search and Rescue. This is a voluntary service. We also take a lead in supplying and operating communications for Civil Defence. To raise funds we supply safety communications for things like the annual Coast to Coast endurance race from one coast to the other across the South Island. Why am I waffling on about all this? The reason is that on my 4x4 vehicle which is fitted out with several radios at my expence, I have the logo -- Amateur Radio Emergency Communications. USING OUR HOBBY TO HELP THE COMMUNITY. Isn't this both a Hobby and A Service. Some hams like to head hunt for contacts and are not interested in a chat. Some enjoy data modes. Some enjoy making new friends. My interest is Emergency Communications.

>past choices of the FCC with strong ARRL support at the time.

Or even 5WPM. The FCC could require a code speed of one word per year and
it would meet the ITU requirements.

Of course, those who believe the ITU requires code speeds of X words per
minute also believe that the ARRL represents the majority view of licensed
amateurs. 'Taint so, Mc Gee.

This isn't usually true. A UPS which can sustain 200 watts for 10 minutes
can generally sustain it indefinitely. That's because 10 minutes is more than
long enough to reach thermal equilibrium. You do have to be careful when
looking at the ratings for the UPS, however. There is a peak surge rating,
and a sustained rating. The former is only valid for momentary starting
demands.

Of course, they are *amateur* frequencies, so they are covered by Part 97.
What I am saying is that Part 97 cannot authorize you to operate in a non-Part 97
service.

>> over the past 21 years where CW was used on VHF.

>I don't know of *any* EMS activities *local or not* that use Morse code
>any more ... it's too damned slow, awkward, and error-prone ...

Oh, there was a ship disaster not too long ago in which CW was used,
remember? Your response at the time was that ship had no business being
at sea if it had to depend upon CW for help.

>> "Modern EMS operations"??? Voice comm is as old as CW* (both came into
>> existance around 1921).

>Morse code was invented, I believe, in 1847 ... well before the telephone ...

I said CW, not Morse code. (Do you know the difference between the two?)
And why bring up the telephone? We're discussing comms WRT radio, not wire.
(Typing on a keyboard is well over 100 years old but that doesn't mean
we're using a 100+ year old means of communicating *right now*. Vocal
speech is tens of thousands of years old but that doesn't mean voice
radio communication is tens of thousands of years old. Your reasoning
is beyond belief.)

Contrary to your remark, radiotelephone (FM, SSB, AM) is not modern;
it's as old as CW (you need to modulate a Continuous Wave; modulating
a damped wave won't carry much intelligence).

I need some help. I have gotten an old uniden bearcat shortwave radio (10 khz to 30Mhz) It does not receive but will come on and apparently all other functions will work. The factory says the "front end" is bad . I need some guidance as to how to find out what to fix.

thanks any help would be appreciated

5278. U.S. Autopatch from Mexico?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-10 00:00:00 UTC
From: kf6dgn@aol.com
Message-ID: <19970610202700.QAA03115@ladder02.news.aol.com>
Source record: 195995

Would it be legal for a Mexican XE station to use an autopatch repeater in the United States? (while still in Mexico) How about an American station using an autopatch in Mexico? Also where can you find FCC part 97/95 online? I tried looking for it on the FCC and ARRL web pages but couldn't find it.

Perhaps, but don't overlook the wide variation in receiver audio, mostly
because of the speakers. Some radios seem to have speakers that peak
the noise at the expense of intelligibility, while others are much
better. HTs perhaps are often the worst ;-)

Any kind soul with info on out of band (MARS) tx mods for the Standard C-108a pocket handheld 2m ht? (Or any ither mods???)

I've searched the internet for several hours with no success. There is a book #9b, that may have the info I need, on radio mods, however.

Thanks for your time and bandwidth....

Well, not much, but a little bit.
>(BTW, I am a licensed HAM.)
That is the key requirement.
>Specifically, I am interested in getting either the JR XP642 or the
>JR XF622 R/C radio. Can I get these on 50 Mhz?
Probably, but call Horizon Hobby to confirm that you can get the model
you want on 6 meters.
>Next question: I have heard that aircraft R/C radios can only be used for
>aircraft models to prevent interference from surface vehicles.
>If I use the 50 Mhz band (I already have privileges on these frequencies
>for remove control of vehicles), can I use an aircraft R/C radio in
>surface vehicles?
Yes. The only tangible difference between an aircraft radio and a
surface radio is frequency. 72 Mhz allocated to aircraft, 75 Mhz to
surface in the license free bands. No such separate allocation in the
ham band, nor is there any separation from any other legitimate users
of the band.
>And lastly, if I am using 6 meter HAM frequencies to fly R/C aircraft,
>would it be legal for me to sell photos taken removely from the craft?
>(It is illegal to use HAM radio for business.)
Seems like the rules that apply to sexual orientation in the US
military services apply here: Don't ask, don't tell. Using a model
airplane for business will also have repercussions in the liability
insurance department. AMA will just say no. Don't know about SFA.

Howard.. In terms I can understand:
RF energy travels slower in coax and most other medium than it
does in air or a vaccum.
How much slower is expressed as "velocity factor" or "velocity
of propogation" and is expressed as a percent or decimal.
Typical velocity factor of coax is 78%, which means that it travels
at 78% of free space speed.. one wavelength in that coax would be
22% shorter than in free space. Phase delays can be easily arranged
by chosing the appropriate length so that after traveling through that
length of coax, the desired phase is supplied. Phase shifting is used
in antenna arrays to produce desired propogation patterns. I'm sure
there are hundreds of other applications. Hope you don't mind this
simple explanation.. I'm just a simple guy.

The W1AQ "Field Day" station consists of two tents, a generator, and a
couple of hastily erected towers. We usually get a packet station working
on battery power, and a VHF radio operating on solar, if we have sunlight.

> KE4IKT
> Founder

No. If you're a new ham and disagree with the ARRL, join them and
take over.
If the FCC has one voice to listen to, it will. They alwyas have.
If the FCC hears four voices (ARRL, AMSAT, W5YI-Inc, and KE4IKT/dba/USARA),
it will either sit on it's duff or sell our spectrum or do what the one
it's used to listening to tells it (guess who). If we who the
old-fahts at the ARRL's worked-all-silent-keys board would gladly
disenfranchise should be so silly as to disenfranchise ourselves by
not voting in the only elections that count -- the ARRL DIV DIRECTORS, and
the minor-leagues from which they're drawn -- they'll be able to tell
the FCC their membership speaks with one voice.

The ARRL has the political power today. In the time it takes to grow
an organization that can wrest that power away, they could do much
damage. It would be much quicker to take over the ARRL by ballot.
Weaking the ARRL today would just give half their power to W5YI and the
other VECs, it wouldn't go to a new organization with no record.

Join the ARRL. Vote. And let the elected reps know that you're
voting single-issue NO CODE. Loud and often. And get your buddies
to get their no code and join and vote -- to vote for you if there is
no other no-code acceptable candidate.

I thought I'd throw this one to the masses, and ask the question. I've been nominated for club president, and I'll be taking the position after our club's June meeting. The club is fairly small (48 members, not even half of which are very active on the radio), and we're located in the northern lower peninsula of Michigan.

Currently, club dues are the only source of income for the club. I'm looking for fresh ideas on how to pull in some cash so we can update our repeater, and accomplish some other things that require some money.

Any and all ideas will be welcomed! Please be specific. For example, instead of "Have a fund raiser.", let me know how YOUR club does it, what kinds of fund raisers do you have, etc. I'd really like to start bringing this club into the 90's, and we need $$ to do that!

Thanks, in advance, for the input. Please email me directly with any responses, in addition to any posts to the newsgroups.

Thanks again, and 73.

Certainly having an Amateur license of any class does not allow one to transmit on police frequencies. It may very well be that the local police were well within their rights to confiscate such equipment. I don't agree with their actions, but they MAY have been in the right...

No, no, no, no, and no. You could interfere with another aircraft. It doesn't matter that the nearest field is in Guam. There are those who fly in their back yard, or in parking lots and your interference may severely injure or kill someone.

The answer to the question of multple frequencies on R/C transmitters is yes it has been done. The first to do it to my knowledge was heathkit. I cannot remember if there were two tunable sections (rf decks), one for each crystal or one and you hit a compromise. I owned several heaths that could be changed from one to another channel, but it's been over 25 years since I have looked at the schematic and I don't remember. I forgot the numbers but the flags I had were orange and white, and blue and white. The problem was that recievers were very expensive back then (or as a 12 year old that's the way it seemed to me at the time) and most people did not have several dedicated to one radio. Heathkits idea was to be able to change freqs if one channel was busy, but it just wasn't practical. The idea of flightpacks had not caught on. If you wanted to change the reciever freq in the airplane, you usually had to dig it out of the foam to switch channels. That was time consuming and nobody did it.

Futaba had replaceable modules on the back of radios in the 80's (FGK7,5,4 come to mind) and each module contained the tuning circuits for the crystal it carried. You could change the rf decks in a second at the field and since recievers became a little cheaper, the concept of flight packs began to catch on for the average flyer. 2 airplanes, 2 modules, one transmitter.

In the late 80's recievers became more inexpensive and flight packs were sold as a package. Now the sunday flyer began to use one radio for multiple planes on the same frequency, and the death of transciever switching of freqs.

The short answer is that your idea has been done. The long answer is that without the rf deck being made to support 2 crystals and a switch, you aren't going to be able to peak the radio for the second crystal while retaining a peak for the first crystal. That would not be wise.

Carl wrote that voice was a "...modern EMS operation..."

Well, look what I just found - a book about voice communication
dating back to 1918 (being sold by W2PM over on r.r.a.ba):

>Radio Telephony - by Alfred N. Goldsmith
>Published by The Wireless Press 1918
>247 pages with photo plates of neat transmitters
>$25.00

That predates CW (Continuous Wave, generated electronically as opposed
to electro-mechanically) by about 3 years.

Some much for voice being a modern mode.

I have an excellent condition Collins 75A4 receiver with 3 filters, spinner knob and original manual. Rig works 100% and looks real nice too. I am interested in trading it for a Kenwood TS-940Sat. If you are interested please let me know.

Yeah ... many models are available for 50 Mhz

>Specifically, I am interested in getting either the JR XP642 or the
>JR XF622 R/C radio. Can I get these on 50 Mhz?

Call a dealer!

>Next question: I have heard that aircraft R/C radios can only be used for
>aircraft models to prevent interference from surface vehicles.
>If I use the 50 Mhz band (I already have privileges on these frequencies
>for remove control of vehicles), can I use an aircraft R/C radio in
>surface vehicles?

Why would you want to?
Not clear on your first statement ... the r/c use of the 6 meter band
for aircraft is a band plan ONLY ... the assumption is that MOST hams
will abide the band plan, and not knowingly interfere with r/c
aircraft control freqs. If you're comfortable having your plane shot
down by some idiot who ignores the band plan by operating other
equipment on that frequency then I suppose you could too ... shoot
down MY plane and you'll speak to my attorney!

>And lastly, if I am using 6 meter HAM frequencies to fly R/C aircraft,
>would it be legal for me to sell photos taken removely from the craft?
>(It is illegal to use HAM radio for business.)

NO ... you could accomplish the same thing by using non-ham commercial
equipment, therefore it is an illegal use of your ham operating
priveledges.

With a 1x2 call, I'd think you'd have at least browsed through FCC
part 97 rules.

I got started in ham radio via CB. I still use both, and I can see the good and bad in both. Nothing can beat CB when it comes to finding out road conditions, speed traps, and whatnot. Two meters and CB are both great for local communications.

So please explain to me what you mean by "CB mentality."

>No, no, no, no, and no. You could interfere with another aircraft.

As I recall, the assignment of frequencies for use in vehicles
or aircraft is not a federal mandate at all. The assignments were
worked out by an R/C organization that tries to set R/C standards.

Technically, there's nothing wrong with using a frequency set aside
for vehicles in an aircarft. You won't interfere with any other
aircraft, but you could interfere with someone operating a vehicle
on the same frequency in the local area (local is within maybe a
mile)..

> It
>doesn't matter that the nearest field is in Guam. There are those who
>fly in their back yard, or in parking lots and your interference may
>severely injure or kill someone.

Actually, the power levels of R/C are very limited and not likly to
interfere with anyone beyond a mile or more... and that assumes
someone is operating another R/C aircraft (or vehicle) on the
same frequency you are and in the same local area. That usually
doesn't happen except at organized gatherings where multiple
R/C aircraft (or vehicles) are being operated.

OK Jim. I quoted the whole message for you this time. Looks like
you're the one with the problem judging by all the above blather you
spewed out. You're the one that used the "Real Ham" bit. You keep
mentioning Len's quote. Is that what's got you all upset? It has a
ring of truth to it. A lot of Advanceds and Extras make a religion out
of Morse Code. Maybe you're afraid of all the sacrilegious, heathen,
no-codes getting their hands on your precious HF bands? Change with
the times, or die.

Well, this is an interesting assertion, Jeff, but I've seen plenty
of evidence to the contrary. A big part of contesting and DXing is
being aggressive, typically not helpful in most organized communications
systems.

Could you back this assertion of yours up with some independent
references?

5308. 10 KW Collins Shortwave Broadcast Transmitters For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-10 00:00:00 UTC
From: superclan@usa.net
Message-ID: <339cf2ee.5346377@news.euro.net>
Source record: 196061

There are 3 Collins10 KW shortwave broadcast transmitters
immediately available. They are currently in western Europe. They
were manufactured in 1982 and very well maintained. The modell is
208 U 10, and can broadcast in AM,CW and SSB. The main valve
is the 4CX10.000 . Frequency range is 2-30 Mhz.
Price for each transmitter (with inbuilt power supply and an
electricity regulator) is 17.000 German Marks (roughly 9,000 US
dollars)

In addition to this, there are 3 SIEMENS 10 Kilowatt transmitters
available. They were used for ship to shore communications. The
Siemens have Telefunken exciters with digital frequency readout.
These transmitters can also broadcast in AM,CW and in SSB.
The Telefunken exciters were manufactured in 1985, and the
Siemens 10 KW boosters were built in 1980, but only in 1989
they came in use, and therefore have only been used in the last 8
years. Included in the price of this Siemens/Telefunken transmitter
is a 3 phase power supply, a double external ventilator and an
airfiltering system. The main valve for the Siemens is the RS 2012.
Frequency reach is 1.5 to 30 Mhz. Price is 10.000 German Marks.

All transmitters come with all the books.
For more information: send an email to superclan@usa.net

>>(if so, what do I do?). 2. Any suggestions of what to pack/leave out? 3.
>>How do I id?

Carry the radios on the plane. They have a very good chance of becoming someone elses radios if you chack them.

Security is not a problem. It is unlikely they will even look in the bag you have them in. I do 50 or more plane trips a year. I have yet to have a request to turn on one of my HTs. The only time they wanted to see in the radio bag I had a GPS, 2 HTs, an IC-706, a tuner and 20 or so patch cables. They looked that was the end of it 30 seconds tops.

Convention is to ID K?0??? portable 2 the actual rule is a little different but don't worry portable 2 is just fine.

Don't flash the radios in NYC, the place is a pit and rip offs are common.

Sorry I have no repeater info as I avoid the place.

Clint, is that the number for a PHONE BBS ? Like we used to use back in
the 70's ? And is KAF3359 a Citizens Band call sign, like they used to have
back in the 70's ? Are those still valid ? Could you trim your signature box
down a bit and save some bandwidth, or maybe at least list some web page
addresses, like we all use in the 90's ?

Thanks,
Jim KH2D

>Equipment NorCal 40A, NorCal 38 Special, Dipoles

That's a GREAT idea !! You can start over here. First, go to the Philippines and get all the slims off 40 meters (look up NPA in the dictionary before you go, and bring your 38 special, you'll need it). Then, you can rent a boat and clean up the high seas in Asia, take the radios away from all the Korean fishing boats (loads of 2 meter rigs) on your way to Indonesia, where you won't have any problem finding pirates at all. On the way home, drop by China and get all the 20 meter radios that are being used as part of the new national HF telephone system, then make a quick stop in Hong Kong and take all the 25-30mhz FM rigs away from the cab drivers. You should get enuff radios to fill a couple 40 containers. And don't forget to order your Radio Police Badge from QST before you leave home, so nobody will complain or question you when you take thier radios away.

But I think, maybe, the guy who wrote the original message was speaking of AM pirate BROADCAST stations, and I'm not sure many high school students would be interested in AM rigs because most of them don't have 2 VFO's, 200 memory channels, and built in antenna tuners.....

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

Or connect to our home page via the WWW http://www.mv.com/ipusers/wd1v

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

FREE - BRAND NEW Macintosh HAM TEST SIMULATORS

Upgrade Fast!

S I M U L A T E the test and get S T I M U L A T E D!

Studying for the ham tests and have access to an Mac? If it runs System 7.XX
and has 4 Meg or more of memory, you're in business with WD1V's Ham Test
Simulators, Morse Programs, Ham Radio.FAQ, and superb "how to study" material.

The newest Macintosh Ham Test Simulators are HERE (and THERE if you can FTP)!

WWW http://www.mv.com/ipusers/wd1v

Or you may obtain a version "6" Ham Test Simulator by mailing me a *FORMATTED
disk HD disk (1.4 M) and include a Self Addressed and Stamped disk mailer for
the return. Specify the test you need.

Simulator Name Version Valid Until

Advanced Ham Test 6.0 June 30, 1998
Extra Ham Test 6.0 June 30, 2000
General Ham Test 6.0 June 30, 1998
Novice Ham Test 6.0 June 30, 1997
Technician Ham Test 6.0 June 30, 1997

Your comments and suggestions for future versions are always welcome.

ATTN: PC and other platform users:
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
My Home Page also links to sites that offer live ham test simulations right
over the net - plus links to Ham Radio.FAQ and VE session schedules.

Good luck with YOUR next test!

Well, Sky King, turn on your HF rig and listen. The U.S. Coast Guard is not the government/military for the entire world. Morse code is still being used by plenty of governments and the military in countries that you don't happen to live in. While you are correct in saying that Eric doesn't have his ducks all in a row, apparantly you don't either.

Although these certificates are still in force, there is no longer any
examination for them. In accordance with Schedule 11 of the
Radiocommunications Regulations, these certificates merely allow one to
operate VHF radiotelephone equipment, they are not as helpful as the
Restricted Operator's Certificate (Maritime).

I saw what you said, Carl, and I saw how you said it, and what you
added to it. I've also seen the constant name-calling you've indulged
yourself in with me and with others. It's all available in the
archives for anyone interested.

For you to whine about namecalling is the height of hypocrisy. If you
can't stand the heat, get out of the kitchen. Or clean up your own
act before you start sniveling at the actions of others.

Physician, heal thyself.

Subject: CW should die, not the "hobby"

In article <3398df31.142137524@news.atl.bellsouth.net>,
Gary Coffman <ke4zv@bellsouth.net> again argued that calculus is a necessary
facility prior to becoming ham:

>>Morse code, basketball, bass solos, and now - the calculus. Some demand
>>Morse code, some demand the calculus. Morse code, the calculus - your
>>intent must be to provide a complimentary rail for us to bang against.

>Not at all. As I stated below, a rudimentary grasp of the principles of the
calculus
>is a critical basic skill.

Let me state it another way then: You are effectively providing a
complimentary rail for us to bang against. It is anti-constructive to
the issue at hand.

>In any science or engineering discipline,
>one of the most essential mental tools is the ability to assign a number
>to a phenomina. As John McCarthy says, "If you can't assign it a meaningful
>number, you don't understand it." For many of the electrical phenomina
>with which amateurs work, the ability to assign a number requires at least
>a rudimentary grasp of the principles of the calculus.

More often than not, an amateur need only apply the number - not assign the
number.

>I'm well aware that it is a license to learn. But like gaining entry to any
>laboratory course, there are certain prerequisites which need to be
>met. I'm insisting that one of those prerequisites is a grasp of mathematics
>beyond the 1+1=2 level.

Absolutely! Exactly what I am saying. However you are holding the bar
much higher than that - higher than is practical for the majority of
amateur radio work; higher than is necessary as an entrance requirement.

>>Ever hear of an R/C time constant? Please, what can you tell us about
>>their common use as constants?

>First of all I'd note that they aren't constants.

That's profound.

>Why don't you tell us how to use a time constant to evaluate the peak and
>average energy dumps in an RC network as a function of time.

How about I just tell you how the circuit works as a function of
frequency? Seems to be good enough for the RIAA.

>>Are you fusing the primary AC, or the DC supply? For the primary, I'll
>>need more info on the transformer. Of course, one must bear in mind that
>>one can only purchase fuses that have at most 2 significant figures, so
>>PRECISION TO FOUR DECIMAL PLACES IS A LITTLE LUDICROUS!! Besides, the
>>ratio between the instantaneous peak current and the sustained current
>>ratings of a slo-blo fuse is fixed. One therefore has to choose a fuse
>>which will not blow under normal inrush current, but will blow when normal
>>sustained current is exceeded (by greater than some amount, plus or
>>minus). The choice is simply among the best available compromise values -
>>less need for precision, yet again.

>You seem to be ducking. I haven't asked you for an answer to 4 significant
digits.
>I've given you enough information to calculate the peak and average inrush.
Will
>additional inrush limiting be needed here? A simple yes or no will suffice.

No. I can put in the correct fuse without using calculus. I happen to
know that current flows into the caps at an exponential rate. And I
don't happen to be interested in solving your problem for you just to
satisfy your rather substantial ego.

>>Your last reply also reported on my alleged "confusion", an approach you
>>happen to share with Vince Biancomano. I think you take me for a fool
Gary,
>>and I don't appreciate your continuing to make these arrogant, patronizing
>>remarks to me in post after post. For someone with such great faculties
>>at his disposal, you display a profound degree of confusion when it comes
>>to "differentiating" real from imaginary, and more to the point - practical
>>from the ideal.

>I'm sorry you feel that way.

I suspect you are being insincere.

>However, you were changing the subject to cookbook >mechanizations, not a
grasp of the fundamental ideas behind those mechanizations.

Nope. Just trying to characterize amateur radio a little more
realistically than you have been.

>The fundamental ideas of the calculus are really quite simple, and need not
be cloaked
>in lots of formalism to be understood. In fact many people have an intuitive
grasp of
>those ideas who have never taken a formal calculus course. Memorizing a bunch
>of cookbook integration mechanizations is *not* what I've been talking
about. If you
>think it is, then you *are* confused.

I don't think it is. Please tell us which way you feel it is: people should understand calculus as a condition of licensure, or, people should think they understand calculus as a condition of licensure?

You seem to be fond of exercises, please cite an example from the current exam pool in which the application of either a differentiation or an integration would be a natural extension - and, should be required of all amateurs prior to acquiring a license. Then explain what precident would dictate such a requirement.

>I don't think that's my fault. I've tried very hard
>to clearly state that I'm not talking about formalisms or cookbook here.

I really don't know where you came up with this cookbook idea - I certainly did not introduce it, unless you consider reference texts to be "cookbooks".

>But in the real world, it is linear change which is the special case. Just
>as the circle is a special case of the family of curves called ellipses,
>linear behavior in electronic systems (or other physical systems) is
>the exception rather than the rule. In electronics, it is often the *desired*
>exception, of course, but if you aren't equipped to deal with the non-linear
>case, how can you hope to approach the special case of linearity?

If we were to take all this as seriously as you, then we would have to conclude that we can no longer construct our dipole antennas using accepted constants, but must instead accurately model the conductor from first principles in each case. It may be useful to be able to do this - but as a skill, it needn't be manditory for everyone entering the service.

>I would note that in reading Feynman's lecture series I did not find him
>as reticient to use mathematics, including the calculus, as you have
>indicated. What he did do is avoid the unnecessary formalisms beloved
>by the pure mathematicians, and what he did do is relate the math to
>the physical systems in a concrete way. I support that idea wholeheartedly.

While Dr. Feynman was never reticent to use mathematics, he was not dependent upon it to illustrate his point. Since you are familiar with his works, then you are aware of his unique ability to convey abstract ideas by analogy to more common, readily observable phenomenon.

>And while Dr. Asimov was an esteemed science popularizer, I don't think
>his efforts are exhaustively indicative of the sort of knowledge needed to
>function in a technical field.

Nice put down. I'm sure Dr. Asimov couldn't care less what you think of his work. His text is to physics what amateur radio is to engineering. The field of amateur radio is but a subset of the field of radio engineering, and as such has a more limited set of requirements. The word "amateur" should not be forgotten here Gary. I use ham radio as a diversion from my work, not as an extension of it.

>>The majority of basic Newtonian mechanics problems can indeed be solved
>>with algebra and trig - the same holds true for amateur radio related

>>electronics problems. I'll not let you have the last word on this point
>>Gary, unless it is capitulatory in nature. ;-)

In regard to Newtonian mechanics problems, it might >be useful to remember who it was who found it necessary to invent the calculus to >solve the general class of problems in mechanics.

How clever. Yes, the proof and derivation of Newton's laws of mechanics required him to invent the calculus. How useful that is to remember in a ham radio newsgroup is less than obvious, except perhaps as a rhetorical construct. He managed to save the introductory physics student a lot of work. An understanding of the implications of his derivations does not depend on a facility with the tools he used in making the derivation. That is at least part of the reason why his relations are so elegant.

I guess our disagreement stems basically from a difference in perception. You evidently view amateur radio as a discipline which demands that each operator have the ability to employ RF engineering theory in his every day operations. On the other hand I believe that amateurs need only to employ standard radio practice. I believe we are, on average, tradesmen/practicioners rather than journeymen/engineers. That some are considerably more, is sufficient to continue to advance the state of the radio art. Thanks for any part you might continue to play in that. But please recognize there's more to communication than Faraday fields, and that calculus does not make or break a good ham operator.

This is a very strange interpretation of plain language.

For what purpose do you think the FCC needs to CYA in such instances?

The section says what it says and most folk who have letitimate need to
use it and can read it will probably interpret it appropriately.

and all they say is that in
> an emergency you can't blame the FCC or

hold them responsible for
> your inability to summon assistance.

The FCC is a representative part of a sovereign nation called the United
States of America. As such, one must have a sovereign's permission to
sue it. Again, from what do you think the FCC must protect itself?

But from any plain reading of
> the wording, the rule clearly gives no permissions of any kind to
> anyone.

How would you have the rules' writers write such regulations? Would you have them specifiy with what equipment, at what power levels, a what time such calls may be made, and what class of operator may make them on and on what frequencies such calls can be made? I hope not.

The plain language does not prohibit you from doing whatever is necessary to make communications in emergencies. I've done it and so reported my actions post facto to the FCC monitoring stations where I was congratulated for doing what I did.
>
> Taken a step further, if you do summon help and the FCC objects, then
> under this rule their objection can not be that you violated Part

This is absurd reasoning. It speaks as if driven by paranoia. Give us examples of what you say that have actually happened in bona fide emergency situations.

>succeeded if the respondents/defendants in those examples really had
>FCC permission to operate in that manner.

I read back through the thread, and in fact, answered at the beginning, if
you also read through the thread there were several cases in which there
were people NOT prosecuted. These were the ones that had no other means
of contact available, and therefore were using the airwaves in an actual
emergency.
The ones that were prosecuted had other means of communications available,
and therefore it was NOT an emergency.

I have had enough of this drivel, you asked, I showed you where you were
wrong. The questions from the question pool are not made up out of thin
air, but ARE the rules and regulations, and by the way:

>If the ends of a half-wave dipole antenna point east and west,
>which way would the antenna send out radio energy?

>A. Equally in all directions
>B. Mostly up and down
>C. Mostly north and south

>D. Mostly east and west
>-------------------------------------

>If you believe that these pool questions and answers are well
>written and to be relied on, maybe you can explain why answer C is
>superior to answer B.

answer B, up and down, is valid only for the distance in which the antenna
is mounted above the ground. Then the down wave is either absorbed or
reflected.
The USEABLE protion of the wave is north and south, but then again, I
don't know why I am explaining this to you, this is just another arguement
you want to start.
1) I made the original statement
2) you called me wrong
3) I disputed the claim
4) You started the name calling, and suggested I sue my teacher (Duh!)
5) I prove you wrong- by question pool, the OPERATING PROCEDURES
6) Now you want to attack the entire question pool as wrong.

Go ahead and make any other further comments, I will no longer answer as I
tire of this as I tire of the CODE vs NO CODE threads.

Too bad you cannot accept facts when you are proved otherwise. join an
emergency Management Team and learn the REAL facts.

And to all the amateurs here: be assured: In a REAL emergency, when no
other means of communications is available, use whatever means available
to help or get help. Lives may depend on it, even of the caller is W2tg,
an extra on extra bands needing help and you are a tech scanning the
bands. I am sure he would change his mind then, and would WANT your help!

ARRL prints a yearly "Repeater Directory" which lists by state and city. This is a small format book which will stow handily in your vehicle glove box.

They also publish a neat CD-ROM product which allows you to trace a route on a map, designate the "coverage" of your rig in miles, and it will print out a listing of repeaters which are within that distance on either side of your planned route.

Exactly. Ham radio is designed to let a ham do what he's interested
in doing. Anybody who uses the excuse that the bands are full of
geezers, radio cops, etc, is just too damn lazy to get off his butt
and either find others with like interests or find ways to pursue his
own interests. They are probably not going to be good hams, anyway,
and the hobby is probably better off without them.

Zack, lead-acid deep cycle batteries occasionally need a so-called equalizing charge, which is about 0.6 Volts higher (for a 12 Volt battery) than the float charge. They also want to be charged by a constant-voltage source. Make sure the charger you get can do this stuff. See W4MLE's series in QST for March, April and May 1990, especially the May installment.

I've run my home station and the Field Day operation I participate in with a homebrew 10 Amp charger and a 100 AH deep cycle battery. The battery is now about 5 years old, and shows no signs of aging. About twice a year it gets an equalizing charge.

>(not at all surprising, but illustrative of modern EMS operations ... NO CW)

Carl, don't be a kook. I don't know of any *local* communication exercises over the past 21 years where CW was used on VHF.

"Modern EMS operations"??? Voice comm is as old as CW* (both came into existance around 1921). The first recorded use of amateur voice operation during a disaster was '21 or '22. Voice is far from modern.

Check again that your septic tank isn't leaking into your drinking water. You still appear to be full of s___.

73,
Jeff KH2PZ / KH7

*CW = Continuous Wave transmissions (generated electronically, not electro-mechanically), as opposed to Morse transmissions utilizing damped waves (originating around the turn of the century).

Date: 10 Jun 1997 01:00:45 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: Summary of Hawaii hurricane exercise

Carl wrote that voice was a "...modern EMS operation..."

Well, look what I just found - a book about voice communication
dating back to 1918 (being sold by W2PM over on r.r.a.ba):

>Radio Telephony - by Alfred N. Goldsmith
>Published by The Wireless Press 1918
>247 pages with photo plates of neat transmitters
>$25.00

That predates CW (Continuous Wave, generated electronically as opposed
to electro-mechanically) by about 3 years.

Some much for voice being a modern mode.

AFFILIATED CLUBS OFFICER AND COUNCILLOR
RESPONSIBLE FOR WESTERN AND RIVERINA AREAS

I will be visiting Griffith and Wagga Wagga 18 - 22 June and intend to have informal meetings with WIA members in Griffith and Wagga Wagga with the intention to discuss matters dealing with the WIA and Amateur Radio and also to take suggestions back to council.

Times dates and venue of meetings will be on next weeks broadcast.

-- Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

DURAL COMMITTEE MEETING

A meeting of the Dural Technical Committee will be held on Sunday the 22nd of June. it will start about 11am. Further details in a later broadcast

THE KEMPSEY AND DISTRICT AMATEUR RADIO CLUB INC. IS
CURRENTLY TRIALLING ITS TWO METRE REPEATER IN A NEW LOCATION.

THE SITE IS MOUNT YARRAHAPINNI, APPROXIMATELY THIRTY
KILOMETRES NORTH OF KEMPSEY, WITH AN ELEVATION OF 500M.
THE ANTICIPATED PRIMARY COVERAGE AREA IS FROM TELEGRAPH
POINT, TO JUST SOUTH OF URUNGA, EFFECTIVELY OVERLAPPING
THE COVERAGE AREAS OF VK2RCH, COFFS HARBOUR, AND VK2RPM,
PORT MACQUARIE, AND FILLING A SIXTY KILOMETRE SECTION OF THE
PACIFIC HIGHWAY WHICH PREVIOUSLY HAD NIL, OR POOR REPEATER
COVERAGE. A TOTAL OF ABOUT ONE HUNDRED KILOMETRES OF THE
HIGHWAY WILL RECEIVE COVERAGE.

AT THIS STAGE THE TRIAL IS DUE TO TERMINATE ON 14TH JUNE BUT
AN EXTENSION OF THE TRIAL PERIOD IS BEING SOUGHT.
THE REPEATER IS ON 146.875 AND REPORTS ARE WELCOME.

--SUBMITTED BY RAY WELLS, VK2TV, REPEATER OFFICER

WICEN NEWS

A new event on the WICEN calendar is the St Alban Horse Enduro, to be held on the weekend of 28-29th June. Around six operators are required,

from 4am to 2pm, with some checkpoints requiring 4WD access. Please contact Andy VK2XRX if you can assist.

Another new event is the Eastern Confederation of Games, to be held over four days from Tuesday the 8th to Friday the 11th of July. The event will be held in and around Bathurst and will probably only require low power 2 metre equipment. Being held over 4 days during the week will obviously restrict the number of people who can participate, however there are a few enticements. Firstly there will be free accommodation available. Secondly, lunches will also be supplied and finally, there is a good chance that out of pocket expenses for petrol will be re-imbursed. At least 12 people are required. For more information and/or to offer your assistance please contact Peter Carter VK2ETK on (063) 61-3439 or Adam Roberts VK2XRA via email on "aroberts@ix.com.au". Those dates again, Tuesday the 8th to Friday the 11th of July.

On Sunday 22nd June, the Hunter region will be providing safety communications for the "Lake Macquarie Australian Half Marathon" championships, and the event co-ordinator will be Peter VK2YGM.

Over the weekend of 28th and 29th of June, the same weekend as the St Albans Horse Enduro, is the Wilderness Rescue Nav Shield, and once again WICEN has been asked to support this event, held in the bush, west of the Central Coast. The event may entail camping out overnight, so you may have to be totally self-sufficient including all food and shelter, not to mention radio equipment and power supplies etc. A four wheel drive may be necessary to access some checkpoints, so if you do not have one, it may be that you will be dropped off on Friday night or Saturday morning and picked up on Sunday afternoon. For more info, or to offer your services please contact Alan VK2YYJ on telephone 015-097-217, packet radio as VK2YYJ at VK2TGB, at at work on (02) 9839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

BITS AND BYTES

Here again we take another irregular and irreverent look at the high-tech industries, and the computer industry in particular. Actually, it has been about two years since the last episode...

The year 2000 is looming closer, and already credit cards are starting to appear with an expiry date of "00". Now, you would think that the credit card
providers would have had ample warning about the inability of "legacy" software to deal with this, but no; it seems that a major provider is having trouble with its ATMs and EFTPOS terminals, which treat "00" as invalid. We hope that the programmers concerned have not already booked their visas out of the country. It may not be a good idea to have any money in the bank on 31st December, 1999, but as so many people will be incorrectly celebrating the new century they will probably never understand why.

It has not been a good week for Intel. Two of its competitors, Cyrix and Digital, are busy doing what seems to be The American Way, and are suing Intel for alleged patent infringement over the technology used in the Pentium Pro and the Pentium II. It would appear that the speed-ups used in these chips are the direct result of Cyrix's and Digital's efforts.

Speaking of these Pentium chips, it would seem that once again, the floating point processor is faulty. Listeners with long memories will recall how the then Pentium quickly became known as the "Approximator", due to its defective floating point unit. Well, it seems Intel has done it again.

Apparently, when converting a floating point number to an integer, you are not warned of an overflow condition, so the program blissfully proceeds unaware that it is now dealing with random garbage.

We reckon that Intel's designers ought to fly in an aircraft designed by computers using their chips; the irony of this situation is that only Intel's Pentium Pro and Pentium II are affected; their competitors', the subject of the
aforementioned lawsuit, are not.

Meanwhile, over at Microsoft, the publicity department is busy downplaying the significance of a programming blunder that leaves every Windows 95 and Windows NT box vulnerable, especially if connected to the Internet. Apparently, all you have to do is send a TCP/IP packet with "out of bound" data -- common enough in the Unix world -- to the box, and it instantly crashes; your scribe can vouch for the veracity of this. The press release on
the Microsoft Web page is an exercise in obfuscation -- it calls it an "issue",
not a bug, and makes a snide remark about Unix -- and they would be a lot more credible if their fixes actually worked...

And now, a story closer to home. An unspecified number of Ozemail users had their passwords cracked using a readily available program called, not surprisingly, "Crack". The fact that the affected subscribers were not billed in
that time is scant recompense for not being told about this for some time.

We
are surprised that not only had Ozemail apparently not heard of Crack, which can decode encrypted Unix passwords, but also that they do not appear to be using shadowed passwords (where the encrypted passwords are kept in a file not able to be read by mere mortals). We reckon that they, or their users, ought to read a good book on practical Unix security.

Be listening next time for another critical look at the industry giants.

-- Dave VK2ZTB

DX NEWS
MALYJ VYSOTSKIJ ISLAND - The group of 12 operators from Finland and Russia will be active until June 16, using the callsigns OH5AB/MVI and R1MVI. Look for CW, SSB and RTTY activity on 160 to 6 meters, including the newer bands. No satellite operations are expected, however.

TONGA - A35SQ will be active until June 16 from Ha'apai, and A35DB will be active on RTTY until June 9.

BAHAMAS - C6AIE wil lbe active from Abaco until June 19. Activity will be on 80 to 2 meters.

FRANCE - Special Event station TM0RSE [TM-zero-RSE] has been active this weekend, and will finish operations today (Sunday)

ITALY - Listen for several Italian stations signinging with and IP1/ prefix from
Gallinara Island, IOTA EU 028 today (Sunday). Activity is expected on all HF bands, including the newer bands. Some 6 meter and VHF/UHF SSB activity is also expected.

US VIRGIN ISLANDS - NA4I/KP2 will be active from June 12 to 18. Activity will be mainly on 6 meters, and this includes an entry in the ARRL VHF Contest this month. Look for W6JKV/KP2 to be active in the ARRL VHF Contest as well.

BRAZIL - To celebrate the 100th anniversary of Belo Horizonte City, ZW100BH will be active until December 14. Activity is expected on all bands and modes.

CAMEROON - Mark La Point, ex J5UAI, is active in Yaounde, Cameroon. He plans to be active on all bands, using CW, SSB, RTTY and other digital modes. Presumably, he will have a "TJ" prefix.

PALAU - V63ME is active from Ponape, IOTA OC 010, and Yap, IOTA OC 012. He will also sign T88ME from Palau until June 10. Look for him on 20 and 15 meters.

MEXICO - Sacrificios Island is being activated this weekend by the Valle Radio Amateur Club with the call sign XF4NVA.

AFGHANISTAN - YA/PA3BTQ is now active for an unspecified period of time.

--ARRL DX Bulletin 25, dated 5th June, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

A reminder that our next meeting is on Wednesday 18th June. Raffy Shammay, VK2KRF, will relate his experiences on his recent trip overseas. He will describe problems in working portable in various countries and will demonstrate the use of a digital camera. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 5th of July so come along from 1:30 onwards and have your T-shirt printed with the society's logo and your call sign - or indeed any other digital image that you may have. Raffy will be arranging the equipment and will also have his digital camera if you would like something photographed. The cost should not exceed $5 if you provide your own T-shirt.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before the meeting. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND AMATEUR RADIO CLUB

LAST SATURDAY SAW ANOTHER SUCCESSFUL COMPUTER EXPO,
CONDUCTED BY OUR CLUB. MORE THAN 900 FOLK ATTENDED
DURING THE DAY AND MOST EXHIBITORS EXPRESSED SATISFACTION
WITH THE DAY AND WERE WILLING TO COME AGAIN TO OUR NEXT
EXPO IN NOVEMBER.

OUR SIX METRE REPEATER IS FINALLY UP AND RUNNING, IN ITS NEW
LOCATION, WORKING OKAY , BUT WITH SOME DESENSING PROBLEMS

OUR INTERNET SITE IS PROVING POPULAR WITH MEMBERS AND A
WEB PAGE IS BEING COMPOSED TO PROVIDE INFORMATION ON THE CLUB

MEMBERS ARE REMINDED THAT AN EXAMINATION. FOR THE
AMATEUR RADIO CERTIFICATE, IS BEING CONDUCTED, AT THE CLUB
ROOMS TODAY, SO. UNLESS INVOLVED. PLEASE STEER CLEAR OF
THE ROOM, UNTIL AFTER MID-DAY.

--VK2GJ GRAEME, PUBLICITY OFFICE

HORNSBY & DISTRICT ARC.

The next mid- monthly meeting, is on Tuesday, 10 June 1997. At 8:00 pm. In the Mount Colah Community Centre, Pierce Close, Mount Colah. (Located near the Eastern Entrance to the Railway Station.) This is the Clubs informal
get-together, to discuss any technical problems, that have arisen, with our equipment. Visitors are most welcome.

Training classes.
For more information phone, the Education Officer Tony VK2BTL on 9487

3383. or for general information phone John on 9807 2490.

The Club conducts, a net every Monday night, at 8.00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are wellcome. Listeners set your scanner to 147.250. Remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

Anarts, The Australian National Amateur Radio Teleprinter Society, is holding its annual World Wide Rtty Contest next weekend June 14th and 15th. Modes used can be Rtty, Amtor, or Pactor.

Frequency Bands are 10, 15, 20, 40, and 80 metres.

Time span of contest is, 0000 UTC 14th June, to 2400 UTC 15th June, that is from 10 AM EST Saturday 14th, till 10 AM EST Monday 16th. Messages to be exchanged are: RST, TIME UTC, AND CQ ZONE.

A very nice Plaque is awarded to the winner of each section, Single Operator, Multi Operator, and Short Wave Listener.

Certificates are awarded to First, to Fifth places in the World, First to Third
places in each Country, or, State, and also to the First to Third in each of Six
Continents.

As an added Bonus this year, and in the future, if successful, any station contacting Anarts Society Calisign, VK2SG, can claim double QSO points. If you require a copy of the contest rules, please send a packet message to VK2CTD at VK2WI, or via Emall to Cdavies at dse.com.au.

It will not matter if the rules do not reach you until after the contest, logs will
be accepted up to and including the 30th September 1997.

Last years contest saw a record number of entries, we are hoping for even bigger results this year. The Committee of Anarts would really appreciate it if
you could spare the tirne to answer a few calls, especially from Overseas Stations, as they receive Bonus Points for working a VK station. Hope to hear your Callsign during the Contest.

--Submitted by Colin Davies Vk2ctd, President of Anarts.

The next meeting of the Liverpool & District Amateur Radio Club will be held at the Scout Camp on Cambridge Rodd Glenfield on next Wednesday the 11th of June at 7.30 P.M. for a prompt 8,00 P.M. start.

The lecture lest month by Brien VK2TRS giving a practical demonstration on Easytrax was very interesting and well received by the members.

There will be no lecture next wednesdeay night but we will be discussing details of the new repeater, the forthcoming Annual General Meeting, the Club Auction, JOTA and a social night coming up. Bring your friends and visitors will be most welcome and tea, coffee and bickies will be served.

The directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Holsworthy Army Camp) A LADARC sign will be placed near the road side in front of the entrance gate to the Scout Camp.

Hope to see you all there.

ORANGE & DISTRICT AMATEUR RADIO CLUB INC

THE ORANGE CLUB'S MANAGEMENT COMMITTEE, IN A PUSH FOR INCREASED WICEN MEMBERSHIP IN THE CENTRAL WEST REGION, DECIDED AT THEIR RECENT MEETING THAT THE CLUB WILL PAY THE ANNUAL MEMBERSHIP FEE FOR ALL OF THE CLUB'S MEMBERS WHO ARE IN WICEN, AS WELL AS THE ONE-OFF JOINING FEE FOR ANY NOT YET IN WICEN, WHO JOIN.

THIS MEANS A SIGNIFICANT DISCOUNT FOR AMATEURS WHO ARE IN BOTH THE ORANGE CLUB AND WICEN AND IT IS HOPED MANY OF THE CLUB'S PRESENT MEMBERS WHO HAVE DROPPED OUT OR WHO HAVE NEVER YET BEEN IN WICEN, WILL TAKE ADVANTAGE OF THIS GENEROUS INCENTIVE OFFER TO JOIN.

OF COURSE. IT IS ALSO HOPED SOME OF THE WELL-KNOWN LOCAL OPERATORS WHO ARE NOT IN EITHER ORGANISATION MAY RE INSPIRED TO JOIN BOTH TOO. THERE ARE NO STRINGS, WE SIMPLY NEED MORE AMATEURS IN WICEN AND THE CLUB!

FOR MORE DETAILS IF YOU ARE INTERESTED, CONTACT THE ORANGE CLUB SECRETARY PETER VK2ETK ON HIS TELEPHONE NUMBER 063 81 3439, 9AM TO 9PM DAILY OR AT CLUB MEETINGS.

In the past, most new hams learned things from an elmer. I didn't learn
much from my novice license, but I sure learned a lot from the extra who
gave me the novice test.

>I feel there also should be a 1st time training class required. When
>you make it through the class then you can take the test. "or" Hold a

One on one training usually works better than classes, Dick. We need
an 'adopt a no code tech program' I think.

I think any operating builds operator skills, Bill. I have noticed a
phenomenon lately because I have become involved in the one
of the local VHF repeaters here. Many times I hear a conversation
between two 'new' hams on the repeater, and one of them has
a signal that is marginal into the machine. Fourty percent quieting,
lots of pop corn, but I can copy every word that is said. The other
guy he is talking to tells him 'I can't copy you, you are too noisy'.
Lack of operating skill ? Maybe, because rarely do you hear four
or five stations talking on an FM frequency at one time. Probably
my wetware modem is more conditioned to listening to signals in
the noise than the new guys modems are......

5328. Ocean Tech Company Looking For Technician

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-10 00:00:00 UTC
From: Andrew Goldstein <aeg@desertstar.com>
Message-ID: <01bc75b8$1a639f60$a267e3a5@howl.com>
Source record: 196081

Dear Reader:

We are a small ocean technology start-up company. Demands for our products Is growing fast, and so we are looking for an electronics / mechanical technician to assist in our production department. The right person is interested in ocean technology and likes working with electronics. You should have skills in reading schematics, operating electronic test equipment and soldering. Maybe you can even design simple circuits. It doesn't matter if you acquired those skills in college or you tought yourself. Recent high-school graduates are certainly accepted.

Our products are underwater navigation and communication systems which are used by robots as well as commercial, scientific and sport divers (check out our web page at http://www.desertstar.com). Your job will be to assemble and test these systems. You must be a reliable and honest worker. As a member of a small, dedicated team, you are fully expected to pull your load. Our customers rely on our equipment in remote corners of the world. It must be reliable. Therefore, we demand attention to detail and the ability to do quality work. We need a person who is interested in getting the job done - putting in long hours should not be a problem.

The job comes with the challenges, risks and opportunities of working for a high-tech startup. While this is an entry level position, you can advance as fast and in whatever direction your talents allow. A lack of 'seniority' won't hurt you, nor will gaining seniority by itself help you. In our company, everyone wears many hats. So you won't be doing just production work, but you'll also be answering the phone, taking orders, answering customer's questions, helping in ocean tests, etc. Initial wages are moderate. Pay will rise as your skills and performance improve.

Benefits:
This is a job for a person who regards working in the ocean field, working on many projects and learning a lot of new skills as a major benefit. We also offer the benefits of a hi-tech start-up: Annual bonus checks that reflect the companies and your performance. Stock options are a possibility if you prove yourself to be an excellent performer.

Our Location:
Desert Star Systems is located at California's central coast, just a few miles north of Monterey. The terrain topside is as spectacular as it is below the water. Unlike the San Francisco area to the north and LA to the south, Monterey County is uncrowded. The weather is usually sunny, though foggy days are common in summer. The diving is great, and it's not far to the mountains or the desert. Our office is located on a former military airport and you can learn flying ultralights or sky diving here. There are several good colleges in the area too.

If you are interested:
Please send an e-mail to Marco Flagg (mflagg@desertstar.com). It helps if you tell us a bit about yourself, why in the world you'd want to get a crazy job like this one, and what your skills and experience are. We are looking forward to hearing from you!

>

Not true. It is a federal mandate and has been discussed many times on
this newsgroup.

But I don't think that is the question since he is asking about 50MHz.
There are no surface or air radios - there are surface and air
frequencies. But 50MHz can be used for either if I recall correctly.
The Federal restriction is that 72MHz is used for air and 75MHz is used
for surface. Most manufacturers sell some radios on either of these
bands, as well as 50MHz (and 27MHz which can definitely be used for
either).

Thanks,
rb

In order to operate an emergency field station, one must first be able to set-up an emergency field station. I always thought that was what Field Day was about. The contesting simply provides motiviation to "activate the troops". The ARRL apparently recognizes your point of view Gary. I believe that is why they offer points incentives for passing traffic, and operating packet stations.

That some people forget, or choose to ignore the real reason they are out there is not the fault of the Field Day organizers. Field Day is our one opportunity each year for all of us to practice exactly what you are preaching Gary. We should all try not to lose sight of that.

The object of the game is not totally dissimilar to that of an emergency - to pass as much information, effectively, in as short a period of time as possible. The differences are obvious too, but not so great as to make Field Day ineffective as a drill. The information must still be exchanged rapidly and accurately. The small amount of information contained in the exchange is compensated for by the number of exchanges. The amount of concentration and effort is not unlike that of an emergency operation. Thank God it only lasts 24 hours, and thank God human life is not at stake. Yes, it's designed to be fun, and it allows us to make mistakes. No reason we can't practice with smiles on our faces Gary.

Maybe your Field Day operation is a joke. But there are those of us on whom the point of the exercise is not lost. We make the most of it, and we get out of it what we put into it. Some of us who cannot get on the air as much as we'd like, come away slightly better operators from the experience. That's the point I think.

In your post you go on to critize some of the poor operating practices we commonly see on Field Day. But I think everyone learns a lesson by

listening to the bad example set by some of these overly "enthusiastic" Field Day operators. We also learn from the examples set by the good operators - those who will stick with a contact until the exchange is understood correctly on both sides. Fortunately this is what usually occurs. The practice of "dominating a channel" is not in-itself a bad one. Competing for dominance of a channel is not in the best spirit however. Calling on top of another station is bad practice. And if you are QRT for even a few seconds on a busy band, it's up for grabs and you can expect to have the frequency in use when you come back. Time to find another. That's the name of the game, and it's in poor taste to fight over it.

The other thing to remember is that many of the operators are inexperienced - just struggling to get it right - and may have been victimized by some hastily contrived and ilconsidered advice. There's a lot to think about in the frenzy of Field Day, but they will take note of an occasional brief and friendly suggestion on the air. Provocative remarks will not be effective. More joy will be derived from making the experience enjoyable for others, than from looking only at your QSO total after the contest.

The fact that we have a few jokers operating Field Day stations does not make Field Day a joke.

>know "what is the best way to learn the morse code?" I'm really looking
>forward
>to learning it, but I need to know what is the best way to learn the
>13 wpm required for the license.
>

There is no best way. Everyone learns differently. What works well for
one person may not work well for you. I have known people who swear
by tapes, although I found them to be tedious and eventually you
memorize them.

Most people agree that you should learn the sound or rythm and not
the dots and dashes. I used Code Quick. This was a combination of
tapes and flash cards that evoked images. For instance, the letter
"f", di-di-da-dit, was pictured as a student asking the examiner
"did I fail it". You have to hear it to appreciate it, but di-di-da-dit
has the same beat as the phrase.

Even after I used the Code Quick method, I still found a block at
10 wpm. I was fortunate to be able to get an MFJ Code Tutor, which
is a shirt pocket sized device that can send random letters, numbers
and prosigns, as well as QSOs and words and even call signs. With this
I was able to listen periodically through out the day for short periods.
I found that short sessions were better than one long one.

The only real advise is to stick with it and practice, all of a sudden
you will find you are gettng it.

Good luck,

Bill Pringle, N1WBO

<snicker> The mode most likely to be error free is the one designed
to be error free, and that's a modern digital method. And unsurprisingly,
such methods are in demand by the emergency services agencies we
serve.

That's quite possibly true. However, it is very difficult for a
non-profit tax-exempt organization to "own" a PAC, even at
arms length, without losing their tax-exempt status.

That does not preclude a group of like-minded amateurs from
forming their own PAC, separate from ARRL. I'd be happy to
contribute to a PAC which shared my viewpoints and promoted
them.

Yeah, but it's only one piece of traffic, and use of automatic packet networks,
or voice repeaters, aren't allowed for the game. But those would be the backbone
of a real emergency operation. The only real concession to the emergency theme
is adding points for rolling the RV away from the house.

>That some people forget, or choose to ignore the real reason they are out
>there is not the fault of the Field Day organizers. Field Day is our one
>opportunity each year for all of us to practice exactly what you are
>preaching Gary. We should all try not to lose sight of that.

If only that were true. If they were practicing what I'm preaching, it would be
more like SET, where the passage of simulated emergency traffic at least
demands some attention to communications content, and where at least
some semblence of cooperative operation is required on the air.

But not many people participate in SET. They'd rather practice their regular
competitive contesting games in a woodland setting. Too bad. Field Day
could be a more realistic emergency preparedness exercise without losing
the fun aspect of being out in the woods.

Note that I'm not saying Field Day is evil. It *is* fun to get out of the house
and have a picnic with your friends, and play a radio game too. But to call
it an emergency preparedness exercise is stretching credibility a bit far.

The only preparedness required is making sure there's gas in the RV, and food and drink in its fridge. Otherwise it is just another contest.

What about when mains power dies... This has happened MANY times during
the life of the machine I use at work (which still runs WFWG 3.11).
Does your PC have a power fail detect mechanism?
If it does, shouldn't it work from the power switch as well?
If not, and you can't shut down safely with power fail and Windows
running, that's bad design. Having a few temporary files stranded
that need tidying up might be tolerable, damage to system integrity
would not. What exactly are you saying are the consequences
of turning the computer off with the program still running?

Hello to all, I'm looking for a 440 UHF ham radio. Does not have to be the latest and the greatest but it must be in good shape and in good working order. Preferably a few memories, touch tone mic, 25 watts. Also, PL is a must. I might consider a older dual bander, like a Kenwood TM-721, etc.
I just missed a 721 at a local hamfest for $215. Oh well.

Thanks to all, Mark, N2FLF

5352. Beginning HAM seeks 2M HT info

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-11 00:00:00 UTC
From: riecherg@agcs.COM
Message-ID: <339F29B1.4919@agcs.com>
Source record: 195955

As a new HAM, I'm looking for any info on inexpensive 2M HTs, around $200 or so. The features I'm looking for include DTMF capability, CTCSS encode (don't know that I need decode), a reasonable number of memories, min 2 or 2.5 watts out on the standard battery, easy to program, extended receive might be nice, etc. Are there any other features I should be looking for?

In perusing the catalogs, the following seem to be the most likely candidates: ADI AT-201 (least expensive and currently includes an offer for a free speaker-mic), ICOM IC-T2A or T22A, Kenwood TH-235A, Alinco DJ-191T, Radio Shack HTX-202. Are there others in that price range that I should be considering?

I'm not looking for info on the HTX-202 as I've seen a ton of posts that indicate it is a very solid performer (Yes, I know it doesn't do extended receive). I AM looking for info, pro, con or comparing the others I've listed. Pointers to any on-line reviews would also be appreciated.

In addition to posting a reply, I'd appreciate an email copy also as I'm not so sure about our newsfeed.

5354. antenna separation

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-11 00:00:00 UTC
From: Samuel Johnson <samjohnson@Bledsoe.net>
Message-ID: <339F3382.564C@Bledsoe.net>
Source record: 195957

I would like to try out my 2 meter MASTR II repeater, Can I use 2 antennas, since I don't have duplexers yet? If so, what kind of vertical separation do I need on them. Also, anything other information that I've forgotten to ask on the subject.

Sam KF4GQS

5355. Motorola Syntor X9000 Info needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-11 00:00:00 UTC
From: Suresh Kagoo <SKAGOO@MSN.COM>
Message-ID: <01bc76bf$d08c0680$2c4d9cce@suresh-pc>
Source record: 195958

have access to a couple of Motorola Syntor X9000. They were in service in the 460 Mhz range.

My question will they go down to the ham bands (440mhz - 450 Mhz). Also will there do 9600 baud packet.

Thanks in advance,

73

Oh, they might get that working too, but I hardly ever bother to enter
those tents.

>Do you fly back to the East coast for Field Day too?

Yup. Gotta leave on Thursday night, with the 6-hour timezone difference
and all... Luckily it is only a 10-hour flight, with a good tailwind.

Does anyone know what kind of lithium cell is used in the FT757?
Is it a coin type or some other shape? Is it mounted in a holder,
or soldered directly to the board?

Any information and suggestions regarding installation will be
appreciated.

73, Marty K1FHR

Welp it depends on your repeater's power output and it's antenna
gain, but about 1/2 mile should do...

Source record: 195965

Ahh, yes...the old good buddy theory. If we let them become hams, they must forsake their past and from this day on disparage CB radio.

I too got into ham radio via CB as many of us did, although finding peole who will admit it is getting harder and harder. As was said in the previous posting, there are good eggs and bad apples in both hobbies. To this day I will not go anywhere without both my two meter rig or my CB. Why? Because one of them is bound to get me out of a jam and I could care less which radio is responsible for my rescue should I ever need assistance. FYI, here in upstate NY the two meter end of the Capital District Commuters Net was disbanded because qualified individuals could not be found to man it. The CB end of it lives on.

Ok, can we drop this now? It seems some people need to get a life.
Could we also get off the code/no code stuff. If you never tried code,
don't knock it. If you can't pass it, don't sweat it. If you can pass
it, don't put down those who can't. Some people just have a need for
something to make them feel superior to others. Everyone wants to be
the best at something. There sure seems to be an abundance of thin
skinned people out there. It gets a little scary, doesn't it. If
someone asks a question you consider stupid don't get on their case,
just explain it to them. Everyone has questions and someone might
consider your question stupid. Why don't we all cut each other a little
slack? 73's N9KH

I LOVE THIS ONE, I REALLY DO.

Shouting intended.

in the above garbage, the one person offers to teach the other
how to avoid embarrassment by learning to read clear statements.
THEN, the "teacher" proposes that the phrase

CQ Japan DE WB7DOW Idaho,

is less efficient than

Hello Japan, calling any JA station. This is WB7DOW in Idaho.

Notice in his call he slipped and did NOT say "any JAPANESE
Station" which would be plain English. He said "any JA station.

Preacher, practice what you preach,
or is this another place to use that ubiquitous, iniquitous phrase,
"BUT THIS IS DIFFERENT!" ?

Sheeeesh.

ALIEN INTRUDER ALERT.

My name is Lou Hinshaw
I went to Sloan-Hendrix Academy in Imboden Arkansas,
way back when. In the FIFTH not sisth grade, I was
taught that a slide rule uses logs. and the rest of the year,
we all laughed about why slide rules were made of wood.

We were taught that to multy two numbers log-wise, you
simply add them. To divide, subtract. The lady who taught
us this "esoteric stuff" was a standard teacher. I don't know
if it was "in the curriculum" or not.

I feel likelythat when the call was made to the school you
spoke of, you asked if they were still beating their wife, and
of course they said yes. Right?

sheesh.

I have for sale the Icom 735 Hf Rig, works great asking $595.00. Can meet you on the air if you would like to hear the radio.

Also have a Mosley Triband (10, 15 & 20 meters) 3 element Beam. $100.00 + shipping or you pick up. I am located in Wisconsin.

For more info please:

E-mail to: t95194@aol.com

as I don't know when I will be back to check for replies. Thanks

>this newsgroup.

Just curious, what FCC rules part is that found in?

Additionally,
there are no such aircraft vs. vehicle use frequencies specified
for 6 meters (50 MHz to 54MHz)
If there were, they'd be under FCC Part 97 rules for amateur radio.

>But I don't think that is the question since he is asking about 50MHz.

Horse poop. The NRA's emotionally charged fight centers around a
constitutional amendment - an amendment that touches every one of
our lives daily. There is no controversy within the ARS that would
play on our lawmakers' emotions in the way the NRA's arguments against
gun control does.

5379. The typical contact??

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-11 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <866022704.30163@dejanews.com>
Source record: 196019

I download the following of a RTTY System 64 BBS-K1OIK:

HERE IS A STUDY DONE ON THE +TYPICAL+ HAM QSO. A LITTLE BACKGROUND INFO FOLLOWS. THE STUDY WAS CONDUCTED BY TWO HAMS THAT MONITORED AND TAPE RECORDED HAM QSO'S AT VARIOUS TIMES OF THE DAY, 24 HOURS A DAY 7 DAYS A WEEK FOR 3 MONTHS.

THE TABLE OF PERCENTAGES OF QSO TIME SPENT DISCUSSING SELECTED TOPICS -

1) DISCUSSIONS RELATED DIRECTLY TO
AMATEUR RADIO:

A. WAVE PROPAGATION - 2 PERCENT
B. THEORY/TROUBLE SHOOTING - 3 PERCENT
C. ARRL/MARS/CD/CLUBS - 5 PERCENT
D. SPECIAL UHF/OSCAR/SSTV - 7 PERCENT
E. HOME-BREW - 4 PERCENT
F. COMMERCIAL EQUIP - 6 PERCENT
G. RULES AND REGS - 5 PERCENT
H. PROBLEMS TVI/QRN/QRM ETC - 5 PERCENT
I. GENERAL SIGNAL REPORTS - 12 PERCENT

2) DISCUSSION NOT RELATING DIRECTLY TO AMATEUR RADIO:

A. FAMILY ACTIVITIES - 4 PERCENT
B. HEALTH/ILLNESS 1 PERCENT
C. CURRENT EVENTS - 5 PERCENT
D. PERSONAL INTEREST - 5 PERCENT
E. REAL/PERSONAL PROPERTY - 3 PERCENT
F. GEOGRAPHY/WX - 6 PERCENT
G. PUBLIC FIGURES - 3 PERCENT
H. GREETINGS/FAREWELLS - 19 PERCENT

PERCENTAGE OF QSOS RELATING DIRECTLY
TO AMATEUR RADIO - 49 PERCENT

PERCENTAGE OF QSOS NOT RELATING
DIRECTLY TO AMATEUR RADIO - 46 PERCENT

UNCLASSIFIED - 5 PERCENT

A EXAMINATION OF THE TABLE INDICATES A GOOD BALANCE BETWEEN THE AMOUNT OF TIME SPENT DISCUSSING AMATEUR RADIO TOPICS AND THE TIME DEVOTED TO NON AMATEUR RADIO SUBJECTS.

INTERESTING TO NOTE THAT THE HIGHEST PERCENTAGES ARE FOR
GREETINGS/FAREWELLS AND GENERAL SIGNAL REPORTS. (HI HI)

If you went to a zoo armed with a shotgun, the animals all being behind cage, the animals were chained and you shot them one by one would that be called hunting?

What do we call that in HAM radio?

We call it DX hunting via the DX Packet Cluster.

Am I missing something?

Drew Carey said in his TV show after he was planning to live with his parents, "I can dust off the old ham radio, and get myself some tropical fish and then I'll be be the biggest loser in the world."

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my classes- never seen so many confused and bored people. I mean, let's get real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!

Try the new Family Radio Service. The radio's range from about $100 to $200. They are located around/in the GMRS band. You can get the whole run down in Popular Communication July 97 issue or CQ VHF June 97. They are very effective over water. Longest DX on one of these radios at 1/2watt is 385.5 miles over Lake Superior. However they are intended to be used at very shot distance under 5 miles. Check it out. No license requried. Can talk about anything.

> The ones that were prosecuted had other means of communications available,
> and therefore it was NOT an emergency.

As this is a legal matter I put the question to the hlaw mailing list
which is read and contributed to by amatuers who are lawyers. I
believe that I put it in a manner that was fair to both your side of
the matter and mine.

So far I've received just two comments. One said `first save the
life and then worry about the frequency'. That's a nice truism but
it's not helpful as you and I have no disagreement on that point. And
the other reply gave a horror story of a complaint by a California
local law enforcement agency to the FCC which resulted in a charge of
unlicensed operation. But here the case became murky because the
facts were in dispute and the matter was plea bargained down to use
of unapproved equipment and the forfeiture of that equipment. So it
never moved to a hearing before an FCC judge on the point in dispute.

Unfortunately (and surprisingly to me) none of the list subscribers
have attempted to explain the Part 97 Rules we are discussing, but I
remain hopeful and keep reading.

> I have had enough of this drivel, you asked, I showed you where you were
> wrong. The questions from the question pool are not made up out of thin
> air, but ARE the rules and regulations

Again we disagree. The rules have the standing of law - the question
pool is the product of amateurs, the Question Pool Committee of the
National Conference of Volunteer Examiner Coordinators. Of course
the pool is intended to track the rules, but if and when they
disagree it is the rules that control and not the pool.

> and by the way:

>
> answer B, up and down, is valid only for the distance in which the antenna
> is mounted above the ground. Then the down wave is either absorbed or
> reflected.
> The USEABLE protion of the wave is north and south,

This is just plain wrong. The question only asked about the
direction of energy sent out from the dipole itself, and a dipole
radiates in a three-dimentional pattern similar to an anulus or
doughnut. So there will be zero difference between the magnitudes of
B and C (or indeed any other directions in any plane perpendicular to
the line of the dipole). You may be correct in claiming that
amateurs will find that the sideways radiation to be more useful. And
if they had asked that different question, you and I would agree on
the best answer.

I wasn't trying to start a different dispute, just to show you that
the question pool is fallible. But if you and I can not even agree
on the radiation pattern of a dipole, it's not going to be a good
example :-)

There must be a good number of folks reading this thread. Does
anyone else have a view one way or the other on the correctness of
the Novice Pool questions on either that dipole or the use of
unlicensed frequencies in emergencies? And BTW, I'm not disputing
that the Novice emergency help answers are the best of the four
choices offered, just that those best answers are less than fully
correct readings of the regulations. With the dipole question I do
also dispute that answer C is better in any way than answer B.

> Go ahead and make any other further comments, I will no longer answer as I
> tire of this as I tire of the CODE vs NO CODE threads.

There is a difference between our discussion and the Code debates.
The supporters and opposers of Morse Code testing are arguing their
values and preferences. I believe that we are contradicting each
other over facts, and in our case one or the other of us is likely to
be right on each of these points.

> And to all the amateurs here: be assured: In a REAL emergency, when no
> other means of communications is available, use whatever means available
> to help or get help. Lives may depend on it, even of the caller is W2tg,
> an extra on extra bands needing help and you are a tech scanning the
> bands. I am sure he would change his mind then, and would WANT your help!

If you choose to quote me, please do it accurately. I am in no way
suggesting that one should abide by the rules in preference to
helping to save life or property. Indeed that question never came
up before in this thread. All that I am saying is that when someone
does operate outside the regular non-emergency permissions of Part 97
for that purpose, that they are doing it without any permission from
the FCC. I'm really sorry you can't follow what I'm trying to say.

Let's try an analogy. If we have a sick man that needs to get to
hospital then you or I will try to get him there as fast as possible
and we might well feel entitled to ignore speed limits and red
lights. That is fair and also reasonable. But we still do not have
any permission in our states' drivers manuals or highway laws to do
it. It is a mitigation which might defend us from penalties but it is
not lawful, only reasonable. Speeding may well be morally right and
also illegal.

> <Thread terminated for my perusal - no longer interested>

Dewey, I'm sorry I lost you before you even understood what I was
trying to say.

Regards,
--

Whoa, whoa......

Being a DXer has little to do with getting a message (especially
emergency messages) through a traffic system. As a form MARS member and
holder of DXCC I think I have been in both places. Unfortunately I have
been involved with many trying to pass traffic who don't seem to get it
right. Accuracy and speed in handling of message traffic is of utmost
importance. I have personnally seen many of the so called "big boomer
guns" with big amps etc. that have not been able to properly handle
traffice.
I do believe that all manner of operating does indeed help in the making
of good traffic handlers. Good procedures, manners, etc. I also
believe that all traffic handlers should pay very very close attention
to accuracy. NO handler should ever change any content of a message.
All modes work will with traffic handling. I have used CW, voice,
digital modes, etc. and they all work. We just need to practice our
skills in all areas. Proving one mode is better than the other isn't
much of a contribution.
Thanks for letting me say this.

Burt,

Do you have tropical fish?

~~~
Horoscope:

Leo (July 23 - August 22) Today, someone named "Svlad" will appear at
your door, carrying a large inflatable penguin, some fish food, an HT,
and a bag of pistachio nuts. Despite your better judgement, you invite
him in to examine your fish tank. ~~~

Well Burt, guess you didn't see my offer to prove you wrong (at least about many hams) prior to hamvention. I was willing to prove to you that there are friendly, helpful, and interesting (at least to me <G>) hams. BTW I did get an HF rig at hamvention (a Yaesu FT-757GX) so if you are willing to do CW at 5 wpm or can get through on 10M phone when the band is open, I'd be very happy to talk about it further.

Third party traffic is authorized between the USA and Mexico.

The calling party is the first party. The answering party is the second party (that's the repeater and its control operator), and the third party is whoever is called on the autopatch.

What's the problem; it ain't that complicated.

The NRA isn't against gun control. They have been promoting effective
gun control for over a century. Note that gun control requires a firm grip,
careful alignment of the sights, and a smooth steady pressure on the
trigger.

5399. My Maha NiMH battery experience

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-12 00:00:00 UTC
From: Matt Staroscik <staroscik@sowest.net>
Message-ID: <339F91B5.7D05@sowest.net>
Source record: 195839
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I got a Maha MH-FNB-38 NiMH battery today for my Yaesu FT-51R. It's a 650mAh, 9.6V nickel metal hydride pack, and is basically a clone of the factory Yaesu NiCd pack.

When I got it home, I quick-charged it. It only charged for about 30 minutes before my NC-50 rapid charger said it was full. That's odd, because the factory pack charges for about 1 hour. I started using the radio, but the pack went dead early. Also, the battery checker in the 51 incorrectly identified it as a type 31 battery, even though the voltage looked like a 38 (that is, starting at about 11V).

I emailed Maha earlier today and explained all this to them, and I got mail back tonight at about 10:30. They told me that a NiMH pack that has been in storage for some months may be "asleep" and it should be cycled about 5 times to break it in. While it is "asleep" its charging characteristics will confuse the quick charger and cause it to stop charging early.

While the jury's still out on the battery, the customer service is good. I'll post a follow-up once the battery is broken in. I hope it works out.

Do you have the problem running 100 watts? How about 375 watts?
At 375 watts you only loose 1 S-unit of signal strength.

Source record: 195841

I am having trouble locating the molex plug (power supply side) that plugs into most modern HF transceivers such as the IC-738, Kenwood, ect....

The molex connector has 6 pins.
On the top row of the molex connector the middle terminal is keyed---flat side facing up.
On the bottom row of the molex connector the two end terminals are keyed---flat side facing out.

I have searched and searched but cannot find a good part number nor source of supply.
I refuse to pay 29.95 for a pre-fab power cable with the connector attached (ICOM Price).

Hopefully, some of you folks have had the same problems and can provide an answer for all.

Thanks.

Jerry:

I bought an ADI 201-HP (5 w version) at AES for 189.95 and I am very impressed. The only feature I'd like to have that I don't.... but it's certainly not necessary... would be alpha numeric display option. The radio works perfectly and is very easy to program .... plus you could take the money you save compared to buying a more expensive radio and pick up some accessories like a case, better "gain" HT antenna, amp etc....

Message-ID: <5nov0a$6ud$1@news.stetson.edu>
Source record: 195890

My local ARES/RACES group is setting up a permanent station in the Volusia County (FL) Emergency Operations Center, and has installed two ICOM 3220 H dual band transceivers. In order to provide quick and easy operation for "tag-team" operators, the manuals (which we do not presently have) would be very useful. The radios are discontinued, and ICOM has not been helpful in terms of getting a manual. If anyone has one, and would be willing to fax, email, or snailmail a copy, our group would be willing to pick up the tab.

If you can help please contact me <kmccoy@stetson.edu> or our area coordinator Bill KM4AE <km4ae@juno.com> as soon as possible. The hurricane season is upon us.

You'll be sadly disappointed when you begin contacting American hams. The conversations will all center around one of the three following subjects:

1) Recent contests participated in by the operator
2) World War II experiences of the operator
3) Current health problems/ailments incurred by the operator

The Original dividing line between "W" and "K" calls was the line of states
that contain the continental divide. All east of that were "Atlantic coastal
stations" and west were "Pacific coastal stations". So the earliest stations
in the Dakotas, Nebraska, Kansas, Oklahoma and Texas received "W" calls.

Sheesh! How long does this go on?

Masa is a new ham (like Steve was not very long ago) and his
call has not yet been picked up by QRZ.

Masa, welcome to Amateur Radio, and be assured that most
hams are most anxious to welcome newcomers. We were all
newcomers at some time and perhaps not all of our questions
were "smart", but don't be afraid to ask. Ignore the jerks who
feel a need to "validate credentials".

>Can anybody provide a description or a refernce to how a super
>regenerative receiver works? Please email me.

>Thanks in advance,
>Simon

I refer you to ARRL HANDBOOK, 1977, p.241.

Quote:

"Regenerative Detectors.
By providing controllable rf feedback (regeneration)
in a triode, pentode, or transistorized detector circuit,
the incoming signal can be amplified many times,
thereby greatly increasing the sensitivity of the
detector. Regeneration also increases the efective
Q of the circuit and thus the selectivity. The grid-leak
type of detector is most suitable for this purpose."

End of Quote.

That was paragaph one in its entirety, give or take
a typo or two. Your library may have an old ARRL
handbook, or if you are where youcannot get to it,
then if you will email me your address, I will copy this
article and send it to you snail-mail.

Refer to this message or I may forget what it is about.

I hope I missed something.
The UPS is an Unirruptable Power Supply, having in or arond it
a battery. It is to be rated at its ability to run the power for so
long at some stated power consumption.

If it can run at that rated amount, it does NOT follow that it will
run continuously at that rate. The battery will run down.

Sheesh.

What is your problem, Drew? If you don't like Amateur Radio the way it is, then FIX IT! Get involved, become active in a local group, or plant yourself on one of the HF bands and bring some new ideas to the community.

Bitching and complaining will solve nothing. I find that the more people that I communiate with, the more I learn. There are lots of great ideas behind every key, microphone, terminal or screen that frequent the amateur bands. You will never know that by sitting on your ass and bitching endlessly on the internet about old hams.

If you look closely, there are some good people out there. I spent several hours talking on 10 meters last night to several people around the country who are extremely intelligent. Some were engineers, some were doctors, while others were hard working blue collar workers. After all of the QSOs were logged, I noted that not one of them mentioned contests, WW II, or health problems.

Stop spending your time listening and get out and actually talk to someone. The world of Amateur Radio changes when you get involved and contribute.

If you choose not to get involved, then so be it. Just stop your childish attacks on the Amateur Radio community. Some of us are proud to be "Ham Operators."

See you on 10 meters?

:FCC Part 97 rules for amateur radio.

Correct.

CFR Part 97 applies.

The 50 meg channels are not differentiated for surface or
air. It's a crap shoot picking a channel for air use.

ARRL 6 meter band plan identifies the recommended freqs as 50.80
through 50.98 on 0.10 spacing.

The 53.xx channels are REALLY "iffy". TV Channel 2 is there, along
with who-knows how many repeaters.

Those 53 meg freqs are legal, but you're well advised to proceed
with caution there.

It's all contained in the AMA Membership Manual.

Cheers and "sebendy-thuds".

Drew,

What kind of a response was that to anyone, let alone to a new amateur
from another country? You should be ashamed of yourself for jumping on
your soapbox with this gentleman. What has happened to courtesy and
politeness on these newsgroups?

I happen to have been born and raised in "your" state. The summers are
wonderful, but I had to get away from the brutal winters. Also the
confiscatory levels of taxation and mountains of burdensome regulations
which are imposed by the DFL (Marxist) leaders of the People's Republic of
Minnesota. 80 degrees in January and NO state income tax is a wonderful
thing indeed :-)

would not. What exactly are you saying are the consequences
of turning the computer off with the program still running?
<<

re. Win95 crashes scrambling your hard drive.

Here's a really good tip that has saved me and my users many times:

In Settings, Control Panel, System, Performance, File System,
Troubleshooting, check the box that says: "Disable write-behind caching
for all drives."

This will make things run a little slower. But if the machine crashes, you
won't have buffers in memory that have not been written out to disk. The
latter can turn your file system to chopped liver.

This setting does not affect *read* caching, which gives you the majority
of your cache speed gain. Unless you're doing lots of big database work,
the small performance hit is well worth the lowered risk. Its effect is
similar to using "SMARTDRV /X" in Windows 3.x.

Turning off write-behind cacheing in Win95 is much more important than in
Win3.x. Win95 uses your disk as a scratch pad a lot more, 32-bit disk
drivers are writing directly to the disk controller, and much more stuff
is open at once.

In addition to older Amateur Radio Handbooks, as mentioned by others, I remember that the Radiation Laboratory volume "Microwave Receivers" had a very detailed chapter on superregens.

The one-sentence explanation is that it's a regenerative detector that is driven into and out of oscillation at an ultrasonic rate, providing a controlled way to go "beyond" the critical point of a normal regen detector.

>non-profit tax-exempt organization to "own" a PAC, even at
>arms length, without losing their tax-exempt status.

The NRA manages to do it. The NRA has the same tax exempt
status as the ARRL does, and operates under the same rules.
Administrations unfriendly to the NRA have tested this repeatedly,
but have been unable to find an excuse to revoke this status.

>That does not preclude a group of like-minded amateurs from
>forming their own PAC, separate from ARRL. I'd be happy to
>contribute to a PAC which shared my viewpoints and promoted
>them.

As would I. I'd note that an association with the ARRL would make
the PAC more credible up front, however, for the same reason that
NRA-ILA has been more credible and effective than GOA.

I'd also note that an amateur PAC would be most effective working
on the lower levels of government. There aren't many enemies of
amateur radio on the Congressional level, and only a few at the
State level. The politicians most hostile to amateur radio are at
the local level. That hostility usually takes the form of restrictive
regulations on antennas, but it can assume other forms as well.

NRA-ILA has found that they have to work at all levels, but the work
at the local and State level is often just as important, if not more so,
than the work at the national level. By working at the local grassroots
level to elect the right people, a long term solution is found, IE those
are the people who will later run for State and National office, and
getting to them early makes them more faithful allies later.

WINDTRAX BALLOON LAUNCH!!!

WindTrax 12 scheduled for liftoff this Saturday, JUNE 14, 1997

See WindTrax website for last minute details and realtime I-NET photos!

www.windtrax.org

Launch Date: June 14, 1997 (this Saturday!)
Time: Estimated @ 1200 UTC/0700 EST (Indiana local)

Location: Challenger Center, Harris Middle School, Brownsburg, Indiana
Elev ~ 800 MSL Lat 39.49.57N Long 86.23.58W

Crusing Alt: Max Alt estimated at 100,000 feet

FORECASTED TRAJECTORY & CLIMB TO 60,000 FEET:
A. 50 mile SE of launch site, while climbing to 100,000 feet, then decending to surface via
parachute
B. 1 hour to 60,000 feet, and 90 minutes to maximum altitude.

PRELAUNCH FREQ's:
Check-ins (HF) 3.860 to 3.870MHz WD9CXU/Dennis Local Talk-in
147.015/R N9KRS/Bob
NETS BEGIN AT 1145UTC/0645 Local
Balloon type: Kaymont 1500GR
Parachute is 8 ft diameter custom made by KB9BSV/Barb
Flight Packages on flight:
Crossband Repeater by W9DUU/Paul Bohr
2m rcvr to 6 m & 70 cm Xmtrs, with voice ID Nicad powered, half wave
vertical ant., 100mW
GPS/Packet by WB9HIS/Chuck Crist
Garmin GPS rcvr, controlled via Paccom Packet & TNC, dwn linked on 446.0
ATV by KT9B/Terry
CCD's - one B&W up-view, one color Horz. View, plus WB8ELK color
graphics board &downlinked on Wyman ATV xmtr via ' wave antenna
FLIGHT PACKAGE FREQ's:
Crossband Repeater - Dwn 52.525 & 444.85MHz (VP) 50 & 100mW Pout
UP - 144.3MHz (VP)
NOTE! PLEASE REMEMBER! VOICE ONLY ON THE CROSSBAND REPEATER!!!

GPS/Packet - Dn 446.00MHz @ 1200 baud packet (VP) 750mW Pout
ATV - Dn 439.25MHz (VP) 1.5W Pout

I just inherited an Amp Supply LK-500ZC and wanted to key it with
a C line. To work the amp on QSK, which I've heard may not be so great,
I hook the keyer into the amp and key the tx from there. But the Drake is
negative keying. Easy solution? Worth doing?

Or, should I key the relay from the Drake? From where? Since the tx is
on only on key down, this would be the same as QSK, I guess. If I go into
the relay jack on the amp, would the key-down-only xmit from the Drake
make it go kablooey?

Pardon my ignorance, but hey!

Please e-mail to rgp@hamradio.com.

Tnx, Bob

Well, Bob, that's why we call him "Spew". He's a CBer with a ham
license. He shows up here and trolls for a couple of days, and then
disappears again. Usually his comments are berating towards the
elderly, or 'suggestions' (for informational purposes only, of course)
on how to pin someone's coax or rip their antenna down with your
car bumper and clothsline. His latest rant was about "lazy" mexicans
and other racially-biased slurs. When he didn't get a rise out of people
with that, I guess he figured he would start bashing Americans. Pay him no
heed, and eventually he will go away...

I may have a chance of a few days with the equipment to operate HF and 6M in France, licencing (if any needed) etc permitting.

Can anyone confirm for sure whether a Reciprocal is needed or not (the RSGB aren't sure!), I am having difficulty finding the right dept to contact in France, so I am trying for info from the Internet.

Usage will be mainly from the car (6M) but may have the chance to stick up a wire.

Thanks in anticipation someone has done it before and can help.

Because it allows the diploma factory to milk more tuition and
fees out of you (or your parents) ... our college education system
is failing miserably ... I routinely interview people with PhDs and
MSEEs who aren't competent to be a lab technician ... they haven't
a clue, but they sat throught the classes and paid the tuition and
consequently got a degree ... for what it's worth ... which isn't much
in a shocking percentage of cases ... not all students are this way,
but the percentage is very high ...

Source record: 195931

I have a friend who wants to use a push-pull amplifier with 2 2SC2879 transistors. He needs to TX a narrow-band FM signal at about 250W for 24 hours a day, 7 days a week. RF parts rates these transistors at 120W each. If there is a big enough heatsink and a fan to keep it cool, there shouldn't be a problem, right?

As long as the transistors are kept cool, it would seem that you could TX for years before anything would happen to the transistors. What else would cause them to go bad? (If they aren't over-driven, get too hot...)

5447. Can an Active Ham really be RFI & TVI Free???

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-12 00:00:00 UTC
From: Herb Rosenberg <rosenbeh@netsoft.com>
Message-ID: <01bc7789$332949a0$0eae7ecc@rosenbeh.netsoft.com>
Source record: 195934

I am interested in receiving comments on your opinion about whether it is really possible today for an active HF amateur living in a dense suburban QTH, to operate actively without alienating his neighbors due to RFI & TVI.

I have had discussions with several hams that have commented that with all of the TV's, VCR's, cordless telephones, electronic sprinkler systems, security systems, etc. out there, a ham living in any dense residential area fundamentally if faced with an overwhelming challenge in trying to be a serious HF operator and not alienate everyone around him.

What do you think? I would especially appreciate hearing from hams that are extremely active on HF, with high power, living in standard suburban areas with lots on neighbors all around.

Thanks.

There seems to be some confusion as to what we can do in certain hypothetical scenerios.

If I am in distress, involved with an emergency that presented an immediate threat to life or property, I will use "any frequency I want" if normal means of communications are not available. Again this is when I am a station in distress. There is nothing in the FCC's rules (part 97 or any other part) that will prevent me from using whatever means of radio communications I had at my disposal to attract attention, make known my position and condition, and obtain assistance. If that means leaving the amateur bands, so be it.

But not every emergency involves the immediate threat to human life or property. What I describe above is not the same as assisting to facilitate relief efforts in time of emergency or local disaster. In these situations I would not use frequencies outside the amateurs bands without the concurance of the proper authority.

It also doesn't mean that if I am firefighter I can use a modified ham radio for use on the fire departments private land mobile channels (in violation of type acceptance requirements) just becasue "if I am called out by radio it will be an 'emergency'". If I can reasonably be expected to be in such a situation I should have the appropriate radio and license (or authorization).

Regards

Yeah, you missed something. We're talking about using a UPS in a
vehicle where it has vehicle power to draw upon. Hence the battery
won't run down as long as the engine is running.

> long enough to reach thermal equilibrium.

10 minutes is fine most of the time for the bridge, but certainly not for
the
transformer.

How much would you be willing to wager on this one? ;)

(hint: I was a design engineer at a major UPS manufacturer)

Seriously, examine the size of the transformer, look at its insulation
grade,
and then figure out how much continuous power it should be able to handle.

A transformer the size of your fist with class B (or sometimes A)
insulation
no way can handle 200 Watts at 60 Hz continuous... also remember how
fast copper's resistance rises with temperature!

All the extended run units we made had a completely different and larger
transformer, larger heatsinks and/or a fan on the mosfet bridge, and other
considerations.

...Peter

P.S., You do testing, don't you? Paste a few thermocouples on the
transformer
of a UPS, hook it up to a BIG 12 or 24 Volt power supply, and find out how
long
it takes to reach equilibrium at full rated load. Don't fry it, though!

HELP: Is there a difference between RG59A/U and RG59B/U for UHF (used to co-phase yaggis)-Australia

I want to use RG59A/U to co-phase some 470 Meg yagis.
No one in Australia seems to sell some short length(10 metres) of RG59A/U.
But I can purchase some short length of RG59B/U.
Would RG59B/U be satisfactory to use with 470 MHz and later I would have to use it to co-phase yagis on 920 MHz.
What is the difference between RG59A/U and RG59B/u for UHF (used to co-phase yaggis).

Could you please E-mail me direct
aufempen@dyson.brisnet.org.au

Message-ID: <5nnup6cfu3@news.goodnet.com>
Source record: 195979
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

anyone ever taken a scanner apart and done some repairs.
I have two AOR-1000 units.
On one of my units, I am replacing the power board...
not that difficult to do...just need to open up the unit,
remove some screws, unplug some connector plugs, and unsolder one wire.

I've fixed radios and scanners before. Sometimes, I will also make
adjustments to improve sensitivity on desired frequencies.

Hi,

Someone posted a list of all ham tadio email lists (reflectors). I saved the list, but cannot locate it now.

Does anyone have this info?

Thanks de K

There is no requirement to hold this certificate to operate a land mobile service station, although some of the safety service providers have made it mandatory to do so.

Greetings,

On 1997-06-08 norsan@bright.net said:
>Part 97.405 says that ANY station in distress may use ANY means at
>its disposal to attract attention and make known its condition and
>to make known its location where normal means of communication are
>not available.

Note the "at its disposal" this is strictly interpreted to mean amateur
services freqs.

>A word of caution, however, if you do make emergency transmission on
>frequences other than the ham bands, like police frequenceys, you
>had better be in dire straits.
I've heard this argument bandied about quite a bit. Remember the case, I
believe in Arizona, where the guy punched up the sheriff's dept repeater to
get aid for someone in a bicycling accident, I believe. Local sheriff
thought the ham was a good citizen and oughta receive an award, instead he
received word that his license could be had, if I remember correctly.
The FCC seems to interpret "at its disposal" to mean amateur freqs only.

Now, if a guy has equipment that can go out of band on vhf/uhf, your best
policy is, if you're a boater, get a marine license, get a gmrs license,
then you can use those freqs and nobody will ask you what kind of radio
you're using. Still, avoid the public service bands like the plague unless
you've reason to be carrying one of those radios, such as a badge.

Not yet. But it's only a matter of time before the Inbred Operators begin obtaining FRS radios and modifying them. Lots of possibilities here:

-adding external antenna jacks and large, gain antennas

-using inexpensive and readilly available 70cm ham amplifiers with these external antennas

-adding an external mic jack, thus allowing the addition of echo boxes, roger beeps, "lady in heat" noises, robot voices, and other noise toys in order to cause chaos

ARLP024 Propagation de K7VVV

ZCZC AP24
QST de W1AW
Propagation Forecast Bulletin 24 ARLP024
From Tad Cook, K7VVV
Seattle, WA June 13, 1997
To all radio amateurs

SB PROP ARL ARLP024
ARLP024 Propagation de K7VVV

Solar activity is flat again, with solar flux headed into the low seventies. Flux values are expected to stay this way into the next month. There was an upset on June 9 when the planetary A index was 33 and the K index was as high as 6. This signaled greater absorption of radio waves, especially over polar paths.

NOAA had a recent report on the number of days with no sunspots for each month over the past four years. The values are in a bar graph, and there was a trend of more and more spotless days per month until October, 1996. The number of spotless days per month have been declining since then, a welcome sign for propagation watchers hoping for better conditions.

W6LX wrote to inquire about the comments of KE8YX in ARLP023 asking what he meant by the next solar cycle perhaps being a record cycle. I assume KE8YX meant that the next cycle could rival cycle 19 from the late 1950's in activity. That would be nice.

Sunspot Numbers for June 5 through 11 were 15, 15, 17, 36, 23, 11 and 11 with a mean of 18.3. 10.7 cm flux was 73.9, 74.2, 74.7, 73.2, 73.1, 71.9 and 70.8, with a mean of 73.1, and estimated planetary A indices were 3, 8, 11, 11, 33, 6, and 3, with a mean of 10.7.

Hi all,

May have the inclination to get an Icom 706 mk2 in the next few weeks,
especially if we are likely to see the price drift down a little.
Perhaps the slack summer season is upon our dealers and they may want to
attract a little more of the market or perhaps the price *is* coming
down ?

Anyone heard any rumours........

Why are you complaining about what OTHER people talk about?

Why don't you compare your thread to your complaint.

I'm not flaming you. Just drawing your attention to
the possibility that your comments are a magnitude
less interresting than those of which you complain.

Put your name on the list of names the new ham
should avoid.

Hi,

I bought an old Heathkit IB1101 frequency counter at a hamfest and
would like to get it working. I need a copy of the manual, or at
least the schematic and calibration instructions. I think the IB101 is
the same unit. Can anyone tell me if that is correct?

I Would be very happy to pay copying and postage.

Please reply via email.

Thanks,

Bob

The ARRL Letter
Vol. 16, No. 24
June 13, 1997

Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* Seventeen schools on STS-94 SAREX list
* FCC suspends ticket in interference case
* New NL section official for 97 Sweepstakes
* RS-10 silence explained
* Blaha to visit Oklahoma Field Day
* CyberHam Magazine QRX
* Ham Radio & More goes shortwave only
* NY Amateur Radio Month Proclamation presented
* Solar Update
* Thomas O'Malley Moore, K3LTV, SK
* IN BRIEF: This weekend on the radio;
ARRL requests 7100-7300 kHz for American
Samoa; DXCC Processing Status; N6TX goes
full-time with The SETI League; QSTs for Amateur
in Scouting; AEA Division announces appointments;
CIB chief quitting FCC; FCC makes 47-GHz band
spectrum available; Mir SAFEX 70-cm repeater
operational; AO-27 frequency drift

SEVENTEEN SCHOOLS ON STS-94 SAREX SCHEDULE

Thanks to SAREX--the Shuttle Amateur Radio EXperiment--students at 17 schools, including one in the People's Republic of China, are scheduled to talk with the astronauts on the upcoming STS-94 mission aboard the shuttle Columbia. STS-94 is a "refly" of the April STS-83 mission that had to be cut short when a problem developed in one of the shuttle's fuel cells. STS-94 is set to launch on July 1. During the earlier mission, Columbia prematurely returned to Earth April 8 without making any of the scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members. They are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in learning.

Schools selected by the SAREX Working Group for a ham radio contact during this mission include: Mountain View Elementary School, Prescott Valley, Arizona; Center Street School, El Segundo, California; Ione Junior High School, Jackson, California; Foursquare Radio Amateur Youth, Oxnard, California; Crittenden Middle School, Mountain View, California; Robert J. Burch Elementary School, Tyrone, Georgia; Edgewater High School, Orlando, Florida; Lexington Traditional Magnet School, Lexington, Kentucky; Discovery Place Inc, Charlotte, North Carolina; Lawrence Intermediate School, Lawrenceville, New Jersey; Yeso Elementary School, Artesia, New Mexico; Public School No 9, New York, New York; Du Bois Middle School, Du Bois, Pennsylvania; Dunn's Corners Elementary School, Westerly, Rhode Island; Alvin C. York Agricultural Institute, Jamestown, Tennessee; S.J. Davis Middle School, San Antonio, Texas; and Tsinghua University, Beijing, People's Republic of China.

During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. This crew will use KC5RNI, KC5BTK and KC5FVF on FM voice and W5RRR-1 on packet. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an "unattended" mode, allowing amateurs to make contacts with the ROBOT station when the astronauts are working or sleeping.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.--Glenn Swanson, KB1GW

NEW YORKER'S HAM TICKET SUSPENDED FOR 15 MONTHS

The FCC has suspended the Technician Class license of a ham in Brooklyn, New York, for causing willful or malicious interference, using obscene or

indecent language and failure to identify. The licensee, Anthony Barben Jr, N2WNF, consented to a 15-month suspension which resulted from the FCC's efforts to resolve a rash of interference cases in the New York City-Long Island area. The FCC said the violations occurred in November 1996.

The FCC's Enforcement Division has requested that Barben forward his license to the Commission. The suspension became effective this week.--FCC

NEW SECTION UPS THE ANTE ON SS CLEAN SWEEP

Keep an ear out for VO1 and VO2 call signs during this fall's ARRL Sweepstakes! Canada's new Newfoundland-Labrador (NL) Section will be among those that SS participants will have to snag this November on their way to that coveted Clean Sweep Award. The ARRL received formal notification of the change last week from Radio Amateurs of Canada President J. Farrell "Hoppy" Hopwood, VE7RD, although the addition of the NL section actually was approved last year. Some NL hams gave NL as their section in last fall's SS, although the change had not yet been incorporated into the list of SS sections. Joe Craig, VO1NA, of Torbay, Newfoundland, is the Section Manager in NL. RAC Vice President and General Counsel Tim Ellam, VE6SH, said the new section was created "primarily as it was hard to service VO1/2 from the MAR (Maritimes) section due to geography."

The addition of a new section could prove to be a significant challenge for those hoping to work all ARRL and RAC sections, plus VE8/VY1 (a total of 79 multipliers) in the popular fall event. Some Canadian sections already are among the more difficult ones to find and work. (A heads up: Ellam says RAC has also explored the possibility of creating additional new sections north of the border, but no decisions have been reached yet.) The change also means that those who use computerized logging programs will have to add the new section to their program's list of SS sections--just as they had to do last fall with the addition of the Northern New York section.

This year's ARRL Sweepstakes weekends are November 1-2 (CW) and November 15-16 (SSB).

RS-10 SILENCE EXPLAINED

AMSAT News Service reports that the RS-10 beacon, ROBOT and transponder remain silent while designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin, UA3CR, reports that it is hoped that RS-10 will be active again before its tenth birthday later this month.

A special event station to celebrate RS-10's number 10 is being planned from June 21 until June 29 by a group of UK RS enthusiasts, including G4CUO, G4ZHG, G6HMS, G0MKA, G7MUB, G8DYK and G0MKA. They will be active as GB0RAS on all modes on each pass of RS-10, RS-12, and RS-15 and the Japanese FUJI satellites. A serial number will be given for all QSOs on each satellite, and a commemorative QSL card will be sent to each station contacted or SWL.

The RS-10 uplink (CW or SSB) is 145.865 to 145.905 MHz, and the downlink is 29.36 to 29.40 MHz.--AMSAT News Service

ASTRONAUT TO VISIT FD, SPACE CAMPS IN OKLAHOMA

Ham-astronaut John Blaha, KC5TZQ, will be on the air for Field Day later this month as a guest of Oklahoma's Lawton/Ft Sill Amateur Radio Club, W5KS. That word from Mark G. Ewell, KC5IZN, who reports the club confirmed the arrangements with NASA's Johnson Space Center. Blaha and his wife, Brenda, will visit Oklahoma June 26-29, and will also visit two area youth camps the day before FD begins.

"Although our initial desire was to arrange for John Blaha to meet one of his more frequent Mir contacts, Ashley Cagle, WB5OTD, we quickly found out serendipitously that Cameron University will be sponsoring its two-week SpaceCamp for high school students ending June 27 and that the Great Plains Regional Vo-Tech Center will be sponsoring its TechWeek technical camp for junior high students ending June 26." He said the club would try to set up a 2 meter station at one or both of the camps to give the youths a chance to use ham radio. Ewell says Blaha will spend Friday with the campers and be a guest at a Chamber of Commerce luncheon, then help to operate Field Day the next day with the W5KS group. "We might try to make a Mir contact," Ewell said.

While he was aboard Mir for approximately four months late last year and early this year, Blaha was very active on ham radio.

For more information, see the W5KS Web site, http://www.w5ks.org.

CYBERHAM MAGAZINE QRX

CyberHam Magazine publishers Gene Harlan, WB9MMM, and Shari Harlan, WB9SFT, have announced that the magazine has been put "on hold" and has ceased publication. Gene Harlan said the reason is that the magazine has not been successful getting enough new advertisers, and some advertisers had dropped out altogether. In addition, he said subscriptions were down. "I know times are tough for all amateur radio retailers and manufacturers, and we were hoping that we could ride the upcoming sunspot cycle as the interest came back," Harlan said, adding that he and his wife want to "leave the door open" for someone to take over the magazine or perhaps try it again later when its prospects look brighter.

"A mailing will go out around July 1 explaining what we will do to take care of what we owe people," Harlan said. "We intend on keeping Harlan Technologies going." He said software sales had been supporting the magazine.

CyberHam Magazine began publication last September as an effort to merge interest in ham radio and computers. It had been published bi-monthly.

HAM RADIO & MORE TO GO SHORTWAVE ONLY

Starting this Sunday, June 15, The Ham Radio & More show, hosted by Len Winkler, KB7LPW, will only be available via short-wave broadcast on WWCR, 5.070 MHz. The program airs live at 2200 UTC. The former originating station--KFNN, an AM broadcast station in Phoenix, Arizona--dropped the program for lack of advertiser support.

Winkler, who had announced that his June 8 broadcast would be the last, had a change of heart this week and will continue HR&M on WWCR. The program had been syndicated by KFNN via satellite to local commercial outlets. It also was available via Internet audio. "I will continue to have guests each week, except the first week of each month, which is Rag Chew Open Lines with my co-host, Ned "The Professor" Stearns, AA7A," Winkler said. The Ham Radio & More will rebroadcast on WWCR Sundays at 0500 UTC on 5.070 MHz and Tuesdays at 0800 UTC on 3.210 MHz. The program, now in its seventh year, will continue to be commercially sponsored.

For more information, contact Len Winkler, KB7LPW, Ham Radio & More, Box 9219, Phoenix, AZ 85068-9219; tel 602-861-0303; e-mail lenwink@goodnet.com, http://www.goodnet.com/~lenwink/hrm.htm.

SUN FALLS FLAT AGAIN

Solar prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity is flat again, with solar flux headed into the low 70s. Flux values are expected to stay this way into the next month. There was an upset on Monday when the planetary A index was 33 and the K index was as high as six. This signaled greater absorption of radio waves, especially over polar paths. NOAA had a recent report on the number of days with no sunspots for each month over the past four years. The values are in a bar graph, and there was a trend of more and more spotless days per month until October, 1996. The number of spotless days per month have been declining since then, a welcome sign for propagation watchers hoping for better conditions.

W6LX wrote to inquire about the comments of KE8YX in our last report, asking what he meant by the next solar cycle perhaps being a record cycle. I assume that he meant that the next cycle could rival cycle 19 from the late 1950's in activity. That would be nice.

Sunspot numbers for June 5 through 11 were 15, 15, 17, 36, 23, 11 and 11 with a mean of 18.3. The 10.7 cm flux was 73.9, 74.2, 74.7, 73.2, 73.1, 71.9 and 70.8, with a mean of 73.1, and estimated planetary A indices were 3, 8, 11, 11, 33, 6, and 3, with a mean of 10.7.

THOMAS O'MALLEY MOORE, K3LTV, SK

Veteran amateur and broadcasting engineer Thomas O. Moore, K3LTV, of Bethel Park, Pennsylvania, died June 6, 1997. He was 86. An ARRL member, Moore was active on 40 meter CW and on 6-meter SSB and CW and had been on the air up until a few weeks before his death. Moore worked at WMMN radio in Fairmont, West Virginia, WDTV-TV (Channel 3) in Pittsburgh, Pennsylvania, and KDKA-TV (Channel 2) in Pittsburgh, Pennsylvania. He retired from KDKA-TV as chief audio engineer. His son, Thomas II, W7KMA, and daughter-in-law Samboon, WH6CRA, are among his survivors.--Thomas O'Malley Moore, II, W7KMA

IN BRIEF:

* This weekend on the radio: ARRL June VHF QSO Party (see May QST, page 111), Asia Pacific Sprint, West Virginia QSO Party, Portugal Day, WW South America CW Contest and the TOEC WW Grid Contest are all on tap for this weekend. See June QST, page 103 for details.

* ARRL requests 7100-7300 kHz for American Samoa: The League has asked the FCC to amend its Amateur Service rules to permit ham use of 7100 to 7300 kHz in the Territory of American Samoa on a non-interference basis to broadcasters "as a domestic exception to the International table of Frequency Allocations." American Samoa, in ITU Region 3, is an unincorporated, unorganized territory of the US some 2100 miles from New Zealand. The current 40-meter band in Region 3 extends from 7000 to 7100 kHz. The ARRL said the absence of ham access to the entire 7000 to 7300 kHz band impedes communication "because the emergency communications stations that would otherwise be accessible to American Samoa amateurs are established above 7100 kHz." The petition notes that Western Samoa, Australia and New Zealand all permit domestic use of the entire 7000 to 7300 kHz allocation by hams as long as harmful interference is not caused to the primary occupant of the 7100 to 7300 segment in Region 3, the broadcasting service.

* DXCC Processing Status: The DXCC Desk reports that the number of unprocessed applications at the end of May 1997 was 350 (28,738 QSLs). The DXCC Desk received 443 applications (32,928 QSLs) for endorsements and new awards during the month. This compares with 313 applications (25,423 QSLs) for April and 322 applications (23,897 QSLs) for March. Applications being sent out at the end of May were received about two weeks earlier. A few applications received prior to that time were in the process of being audited, and so had not yet been completed.

* N6TX goes full-time with The SETI League: H. Paul Schuch, N6TX, will become full-time executive director of the non-profit SETI League Inc. The organization, devoted to a scientific, privately funded search for extraterrestrial intelligence, signed a five-year contract with Schuch last month. During his first year with the SETI League, Schuch was on sabbatical from his teaching duties at the Pennsylvania College of Technology. He'll now resign that position to devote his full energies to SETI. "After 24 years of teaching, I was, frankly, quite ready for a new challenge," said Schuch. The SETI League recently welcomed its 500th member. For more information, contact The SETI League, Box 555, Little Ferry, NJ 07643; tel 201-641-1770; fax 201-641-1771; e-mail n6tx@setileague.org; http://www.setileague.org/.

* QSTs for Amateur in Scouting: Rich Reitz, KB2CNJ, would like to donate his complete collection of QST from 1930 until 1975 to someone in Amateur Radio and Scouting. If you or your group is interested, contact him at rbreitz@eclipse.net.--ScoutRadio

* AEA Division announces appointments: Former AEA president and cofounder Mike Lamb, N7ML, has been formally named director of marketing of the new AEA Division of Tempo Research. Lamb will work out of his office in Bozeman, Montana. He'll be responsible for marketing and sales. The AEA line of antenna products, antenna analyzers, and the AEA trade name were purchased early this year by Tempo Research Corporation of Vista, California. L. Wayne Dewey, WD6AHZ, has been appointed product manager for the AEA division. He'll direct customer service. Founded in 1984, Tempo Research is a manufacturer of test equipment for the telecommunications industry. For more

information, contact AEA at 760-598-9677 or Mike Lamb at 406-587-3795.

* CIB chief quitting FCC: Beverly G. Baker, chief of the FCC's Compliance and Information Bureau, has announced she will leave the FCC next month to pursue opportunities in the private sector. She has been bureau chief since August 1994.--FCC

* FCC makes 47-GHz band spectrum available: The FCC has made available for public, commercial use 1 GHz of spectrum in the 47-GHz band. The FCC made available 47.2 to 48.2 GHz, which is currently allocated for fixed, fixed-satellite and mobile uses. The action does not involve the Amateur Radio allocation at 47.0 to 47.2 GHz. The Report and Order was adopted May 2.--FCC

* Mir SAFEX 70-cm repeater operational: Reports from Europe indicate that the Mir UHF FM voice repeater is now working. The uplink frequency is 435.750 MHz, and the downlink is 437.950 MHz. The required CTCSS tone is 141.3 Hz. Francisco Costa, CT1EAT, reports working ON6GP on a June 7 pass over Europe.--AMSAT News Service

* AO-27 frequency drift: The 70-cm downlink signal from AO-27 is slowly drifting lower in frequency with time. This drift is due to the natural aging of the transmitter crystal. Controllers can adjust the downlink frequency slightly to compensate for the drift, however the frequency change that has occurred to date is greater than the amount that can be compensated for by controllers. Users are asked to take this into consideration when monitoring the AO-27 downlink (currently 436.792 MHz).--SpaceNews

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

5485. ARLX016 New section ups the ante on SS clean sweep

SB SPCL ARL ARLX016
ARLX016 New section ups the ante on SS clean sweep

Keep an ear out for VO1 and VO2 call signs during this fall's ARRL Sweepstakes. Canada's new Newfoundland-Labrador (NL) Section will be among those that SS participants will have to snag this November on their way to that coveted Clean Sweep Award. The ARRL received formal notification of the change last week from Radio Amateurs of Canada President J. Farrell ''Hoppy'' Hopwood, VE7RD, although the addition of the NL section actually was approved last year. Some NL hams gave NL as their section in last fall's SS, although the change had not yet been incorporated into the list of SS sections. Joe Craig, VO1NA, of Torbay, Newfoundland, is the Section Manager in NL. RAC Vice President and General Counsel Tim Ellam, VE6SH, said the new section was created ''primarily as it was hard to service VO1/2 from the MAR (Maritimes) section due to geography.''

The addition of a new section could prove to be a significant challenge for those hoping to work all ARRL and RAC sections, plus VE8/VY1 (a total of 79 multipliers) in the popular fall event. Some Canadian sections already are among the more difficult ones to find and work. (A heads up: Ellam says RAC has also explored the possibility of creating additional new sections north of the border, but no decisions have been reached yet.) The change also means that those who use computerized logging programs will have to add the new section to their program's list of SS sections--just as they had to do last fall with the addition of the Northern New York section.

This year's ARRL Sweepstakes weekends are November 1-2 (CW) and November 15-16 (SSB).

> W1HYV

Alan,

I would argue that the "dumbing down of ham radio" is the part where
beeping is more important than technical competence and "it's just a
hobby" is the "war cry" of the contesters, DX bullies, and other competitive
games cretins who think that their game is THE reason for the existence
of ham radio ...

De-emphasize code and re-emphasize the technical side if you don't
want to partake in the dumbing down of amateur radio ...

> http://members.aol.com/yaesutom

Tom ... if you're looking for reliablilty, you need to keep 'em cool AND
derate them ... running at the max on a continuous duty basis will likely
shorten the useful life of most any part ... in transistors, heavy current
densities can cause metal migration and other failure modes ... the closer
to the limit you push, the more the failures are likely to accelerate ...

Besides, if you're combining 2x 120W output rated parts and trying to
push out 250W you're already a tad over the ratings and you haven't even
allowed for any losses in the combining and output networks ...

You might want to consider using two push-pull pairs, combined with 90 deg.
hybrids on each end ... that configuration will permit one pair to fail and
still allow the other to keep working (with a loss of a bit over 1/2 power,
but not a catastrophic outage ...) and you'll have a healthier derating for the
reliability you want ...

ARLB032 New Yorker's ham ticket suspended for 15 months

ZCZC AG32
QST de W1AW
ARRL Bulletin 32 ARLB032
From ARRL Headquarters
Newington CT June 13, 1997
To all radio amateurs

SB QST ARL ARLB032
ARLB032 New Yorker's ham ticket suspended for 15 months

The FCC has suspended the Technician Class license of a ham in Brooklyn, New York, for causing willful or malicious interference, using obscene or indecent language and failure to identify. The licensee, Anthony Barben Jr, N2WNF, consented to a 15-month suspension which resulted from the FCC's efforts to resolve a rash of interference cases in the New York City-Long Island area. The FCC said the violations occurred in November 1996.

The FCC*s Enforcement Division has requested that Barben forward his license to the Commission. The suspension became effective this week.

Can anyone please help me?
I am currently building a Direct Conversion radio receiver for my college project. Unfortunately, I cannot seem to construct an adequate actve Band Pass Filter to resolve CW/SSB/AM. My prefered method is using an LF353 chip in construction of an active filter. Can anyone offer me a simple circuit for an active band pass filter to incorporate within my receiver project.
Your help would be greatly appreciated

Many thanks,

Jason

Man, I'll tell ya, that is a good question. I just thought I'd visit
this newsgroup to see what's going on in the ham world these days, and
I guess I thought there was some back-biting in some of the other
ng's, but there is some serious venom here. It DOES sound sorta like
what you hear on the good ole' CB.

Go ahead, I'm a big target.

Hope you are enjoying your visit in NYC.

145.450 is probably the best 2 meter repeater in the city. It has
excellent coverage throughout New York city.

I'm sure if you call up the 145.45 machune, you'll get whatever info you
may need.

Enjou the visit to the greatest city in the world.

: a controlled way to go "beyond" the critical point of a normal regen
: detector.

: 73,
: Mike, KK6GM

An excellent brief description. It was invented (discovered?)
by Armstrong during experiments attempting to validate his patent
on the regenerative receiver. He lost the patent suit on the
regenerative set. The superregen was recognized as being extremely
sensitive, but so inselective as to be useless. As a result
Armstrong was allowed to keep his patent on a useless receiver
until vhf was needed, when it became the only receiver anyone
could use! This gave him the money to work on FM.

Of course he also invented the superheterodyne!

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

>better than using CW and jargon when communicating in voice.

Better not say "CQ" then.

>Sheesh! Some people! You aren't one of those lids who spells out
>"H-I, H-I" every so often on two meters, just to fill in while he's
>attempting to think, are you?

I rarely operate above 28.1 Mc.

> Do you say "CQ 20, CQ 20" when
>you're on twenty meters, as if you were going to attract replies on 15
>meters?

None of my HF rigs have microphones attached to them. I've only done CW
for the last 21 years - never have had the opportunity nor desire
to "say" CQ.

>Do you understand what I'm saying here, Ten Four? Or shall I
>Ten Nine?
>Seventy Thirds, Good Buddy. See you on the flip side. Keep the
>rubber side down and the shiny side up. I'm Ten Seven.

I guess what you're trying to tell us is that you're one of those hams
who got interested in amateur radio via CB. From the above it appears
as if you've brought some bad habits along.

Give it up, Glen. CW prosigns are an ingrained part of voice operations.

This did not make cq, qst, or 73....
It is on the ARRL Hamfest web site!

This did not make it into the June Florida Skip..It will be in July Skip.
Please help spread the word...

USFREC@eng.usf.edu

Subject: USF HAMFEST Sat 7/26/97 9am-3pm

well.... if you get this and still need more info let me know.

Don't forget the SIXTH ANNUAL USF "Last Minute" HAMFEST in FLORIDA
Sat July 26th 9am to 3pm
in the ice cold air conditioning...

Hosted by the University of South Florida Radio and Electronics Club.

Admission $3.75
1st swap table $10 including ticket.
Additional tables $10 each up to 4 tables.
The 5th table and above are $15 each.
If you need more than 5 tables you must contact us!!!
In order to ensure your table reservation please pay early.
---
for table or advanced ticket sales: (must be postmarked by 7/15/97)
PLEASE SEND US A SELF ADDRESSED STAMPED ENVELOPE (SASE).

USF HAMFEST
4202 E FOWLER AVE., CTR 2416
TAMPA, FL 33620

USF is easily located on Fletcher Ave between I-75 and I-275 in Tampa.
Enter campus on North Palm Dr. follow the signs to the
USF Special Events Center. (CTR)

Just close enough to Busch Gardens to let the family go there while you play!

TESTING WILL TAKE PLACE AT 11AM.

TALK IN 146.94-
Vendors may setup FRI NIGHT 6-9pm and SAT MORN 8-9am.

SEE YOU THERE!!!!

for more info, direct questions to: USFREC@eng.usf.edu

OR WATCH http://www.eng.usf.edu/studorgs/radio

or call the club at: 813-974-2253

We are committed to making sure that this hamfest is affordable to the average ham... We have kept our admission and table prices the same for several years.

Our only increase this year is for folks that buy 5 tables or more (from $10 to $15). As I am sure you can understand our costs went up. This will generally affect only larger vendors or folks that are selling large quantities of stuff at the hamfest.

Thanks for many years of faithful support.

The USF Radio and Electronics Club

> Thanks John K7FD

I've never run the solid state one,but the AL811A or 811 is a great amp. The 811A is good for simplicity,if you pop a tube you just pull it and replace it. With the 811 you have to neutralize the tubes. By the way,if you get either one I would replace the cheap Chinese tubes that come with it with a matched set of Svetlanas. Also with heavy use the chokes get a little crispy and need replacing. Of course I ve always drove mine with a 100 PEP,not the 75 in the manual. I've got 200 countries on 10 and 150 on 20 with the 811 amps. I also have a mint AL811A I'd like to trade for a compact hf mobile such as a TS50S or a DX70T or for a mint HF mobile amp 600+ out put 80-10. Just moved into a townhouse and the rf is too much. Good Luck Jim

5522. Digest of Articles - QST Apr 97 (Long - 37k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-13 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5nred9$ih8@news1.infinet.com>
Source record: 195859
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the April, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A Single-Board QRP SSB Transceiver for 20 or 75 Meters
Author>Benson, Dave - NN1G
Source>QST Apr 97, pp. 29-33

Abstract>Construction of a single-band SSB transceiver with max output 3- to 4-watts. Receiver is a superhet with cascaded-crystal IF filter.

Digest>This article provides full details for building a complete single-band SSB transceiver capable of delivering 3- to 4-watts PEP output. The receiver section is a superhet design with a cascaded-crystal IF bandpass filter and AGC. The article describes building the 20-meter model; details for building the 80-meter model can be obtained by direct contact with the author.

Although several integrated circuits (IC) are used, much of the circuitry uses discrete components individually soldered to the circuit board. A photograph is included showing the completed 20-meter version. It is a very complex board. Alignment is a straightforward process that does not require any test equipment beyond a general-purpose multimeter.

The frequency is controlled by a voltage-variable-capacitance diode (varicap). The DC voltage that controls it is adjusted by a voltage divider using a ten-turn pot. A builder can decide whether or not to use some kind of counter or geared-dial mechanism for frequency calibration, or a frequency counter. The author provides another option: an add-on circuit with a "spot" switch that, when activated, keys the current frequency setting in Morse code on the audio output, at 13-WPM.

In use, the rig requires a speaker/microphone. The author used one built by Yaesu, but less costly ones are available such as the Radio Shack No. 19-314 and the MFJ-284.

A kit containing the PC-board ready for soldering, all board-mounted parts and a detailed assembly manual is available for $109. A more complete kit that includes an enclosure, controls, connectors, and the audio Morse code frequency readout costs $169. Both prices include domestic shipping.

Title>TA2:DTMF/LT Decoding Made Easy
Author>Suits, Bryan H. - WB8WKN
Source>QST Apr 97, pp. 34-36
Abstract>Describes construction of a versatile DTMF decoder that contains logic for controlling electrical switches in a wide variety of possible applications.

Digest>Dual-tone multifrequency (DTMF) is the formal name of the dial tones that are used by modern telephones. Similar tones are generated by virtually all new VHF and UHF ham rigs in order to access repeaters and actuate various of their functions. With a decoder, the same tones could be use to control remotely anything that can be activated by one or more electrical switches.

WB8WKN, in this article, describes a highly versatile decoder built around a programmed microcontroller. It is simple and relatively inexpensive to build, and not difficult to program. However, once

a program is written, it must be entered into the memory of the chip with an electronic programmer designed for that purpose. Such equipment can be bought from electronic supply houses, such as Digi-Key in Thief River Falls, MN 56701; or else, Digi-Key offers a programming service for these microcontrollers.

The decoder recognizes the standard twelve tones (0 through 9 plus "*" and "#"), and "long tones". A long tone is any of the twelve audio frequencies held for a period three times as long as that of the normal beep.

The article describes one application for the system that was built for the author's ham radio club project. It is for use by anyone who wants to monitor a club repeater. On detecting a long tone, it alerts the system for a possible control tone to follow. A special code for each user activates that station's loudspeaker. In the activated condition, tones can control two different accessories. The unit is also able to eavesdrop on tones sent by other users. Optionally, the system can be set to turn off the speaker automatically after a certain time.

A limited number of parts kits, including the microcontroller programmed as described in the preceding paragraph, are available from the author for $35, including domestic shipping. His mailing address is: 1502 Brookside Drive, Houghton, MI 49931.

Title>TA3:The PortaPeater
Author>Craswell, Jay - WB0VNE
Source>QST Apr 97, pp. 37-39
Abstract>Building a voice repeater that will record up to 20-seconds of audio input, then immediately retransmit it. Can be used with a transceiver as a simplex repeater.

Digest>This construction article gives all the information required to build a simplex voice repeater. Built around four integrated circuits, it will record an audio input for up to 20-seconds, then immediately retransmit it. It contains a carrier-operated squelch (COS); as soon as a signal is detected at the input, recording begins. When the input stops, or when the 20-second capacity is full, retransmission starts. After the message is retransmitted, the memory is automatically cleared, ready for the next message.

Although this kind of operation has some similarities to that of the VHF and UHF repeaters that are so common, they are not the same thing. The familiar repeaters transmit on a different frequency from that received, and the output is simultaneous with the input. They are licensed for unattended operation. Simplex repeaters, on the other hand, transmit on the same frequency as that received, and the retransmission is delayed. At least in the USA, it would be a violation of FCC regulations to operate such a repeater with no human in direct control.

There are some very worthwhile applications for such a device, however. For one thing, operation is not limited to FM; it could also operate SSB or CW. In an emergency when power is out over a large area, it might be very helpful to take a mobile rig or an H-T to the top of a hill overlooking the disaster area, thereby becoming an instant emergency repeater. Another worthwhile application is a "smart beacon". With the beacon in operation, anyone could test a transmitter and hear exactly what it sounds like on the receiving end.

The unit described is built around four ICs and is a simple, straightforward construction job. The author is offering a bare PC-board, etched and drilled, plus a programmed CPU, for $30. He also will supply complete kits, or fully-assembled units; contact him by phone at (612) 492-3913, or via E-Mail at: 73016.27@compuserve.com, for details.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:TASCO Electronics TSC-70U Slow-Scan TV System
Author>Wolfgang, Larry - WR1B
Source>QST Apr 97, pp. 59-61
Abstract>Describes a commercially available SSTV system with several optional accessories.

Digest>This is a plug-and-play Slow-Scan TV (SSTV) system with a number of optional accessories. SSTV is something of a misnomer; it is a system for transmitting and receiving single-frame pictures by radio, so is more nearly like FAX than TV. Essentially, the system scans a picture at a rate low enough that the signal remains in the relatively low audio-frequency range. When the audio is used to modulate a transmitter, the resulting bandwidth is sufficiently narrow to be acceptable on the HF amateur bands.

The most basic system would be comprised of the model TSC-70U Telereader Color Scan Converter, a TV set, and an amateur transceiver. The audio output of the transceiver is connected to the scan converter, and from it to the video input of the TV set. If the set does not have a video input, the video signal must be run through a VCR or RF modulator. This basic system will allow the user to transmit and receive color pictures and graphics of all sorts. It requires a DC power supply of 11- to 15-volts at 300-mils.

If one adds a computer to the system, it will be capable of creating a wide range of graphic effects. To connect a computer, one will need the TASCO EB-232V (if the computer has an unused serial port), or the EB-70V (if the computer has an available card slot). Either model comes with control software that allows one to convert JPEG or bit-mapped files into SSTV pictures, and vice versa. It also creates an easy way that one can convert scanned snapshots or still frames from video cameras to

SSTV pictures.

The manufacturer's list price for the TSC-70U is $498. The EB-232 accessory is $68 and the EM-70 is $198. The prices of the last two accessories include the software.

Title>PR2:ICOM IC-R8500 Communications Receiver
Author>Moore, Bill - NC1L
Source>QST Apr 97, pp. 61-64
Abstract>Performance review of a high-performance, exceptionally wide-band radio receiver; tuning range: 0.1- to 2000-mHz. Designed primarily for SWL and scanning/monitoring uses.

Digest>The IC-R8500 is an exceptionally versatile and wide-band communications receiver, designed primarily for short-wave listeners (SWL), or monitoring. It nearly covers the proverbial "DC-to-Daylight" frequency range; its actual coverage is from 0.1- to 2000-mHz. in all modes, with the exception that the cellular phone frequencies are blocked out (in accordance with US Federal law).

The front panel looks very much like a full-featured amateur transceiver; the number of control buttons, knobs, and switches is nearly the same. It actually provides 1000-channels of memory! To help keep them all straight, the radio provides for alphanumeric names for each channel.

The ARRL laboratory tests showed that the receiver exhibits highly creditable performance on all modes and on all bands. Versatile scanning functions are provided. The unit will scan forty channels per second in programmed or memory scan. Three different delay modes are provided with timing adjustable from 3- to 18-seconds.

The reviewer was critical of one aspect of the scanning functions. Of the twenty banks of memories, he would like to segregate different services to various banks, such as fire-departments to one bank, police in a second, and the like, and be able to scan any desired number of banks at one time. But the R-8500 allows only scanning of one bank, or covering all banks, with no choices between.

The reviewer's summary states: "This handsome receiver is a terrific centerpiece, or complement, to any listening shack". The manufacturer's list price is $2400.

Title>PR3:Tigertronics BayPac BP-2M Multimode Modem
Author>Lindquist, Rick - N1RL
Source>QST Apr 97, pp. 64-65
Abstract>Describes a hardware/software multimode modem. Most modem functions are performed in a computer, using software supplied.

Digest>The BP-2M is a tiny package, only slightly bigger than the common DB-25 connectors on the ends of printer cables. The hardware is

only a kind of interface; the modem functions are nearly all performed by the computer using BPMODE software that comes with the unit.

The reviewer made a thorough evaluation of the operation on VHF/UHF packet mode. He found that it operated in excellent fashion. He also noted that he had to operate his computer using the DOS operating system, as the software is not usable with WINDOWS. Furthermore it will never be, because the modem software requires total control of the computer. It cannot tolerate the kind of time sharing inherent in WINDOWS, or any "terminate and stay resident" (TSR) programs.

The manufacturer's list price for the BP-2M multimode modem is $69.95. The Model BP-2 packet-only modem is $49.95.

Title>PR4:Alpha Delta Communications Model VRC Variable Response Console
Author>Lindquist, Rick - N1RL
Source>QST Apr 97, pp. 65-66
Abstract>Describes a loudspeaker console for use with a communications receiver to improve the quality of the audio output.

Digest>The Model VRC is a loudspeaker combined with a built-in audio equalizer, plus peak and notch filters, designed for radio operators who are not satisfied with the "communications quality" audio output from communications receivers.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Re-exploring HF/VHF Digital and Image Modes on the Cheap
Author>Mayhan, Terence W. - K7SZL
Source>QST Apr 97, p. 69
Abstract>Rebuttal to a letter implying that HamComm software is not suitable for serious RTTY work. The author states the contrary and explains the contradiction.

Digest>This letter is a form of rebuttal to the article by AA3EK in New Ham Companion "Explore HF/VHF Digital and Image Modes on the Cheap", QST Dec 96. The earlier article implied that HamComm software is not suitable for serious RTTY and AMTOR operating. K7SZL states that the reason it seemed that way to AA3EK is that the latter was using inadequate audio filtering in his setup. It was the lack of filtering, not shortcomings in the software, that made system performance less than optimum.

K7SZL's letter recommends that one seriously wanting to try digital modes should be sure to use the narrowest IF filters, and/or DSP audio filters, available. He includes a schematic diagram of a simple active audio filter that can be used if neither is available.

Title>TC2:A New (?) Serial Communication Protocol Discovered...
Author>Ulbing, Sam - N4UAU
Source>QST Apr 97, p. 70
Abstract>A "new protocol" reported in a magazine is simply an adaptation of Morse code.

Digest>N4UAU cites an article that recently ran in ELECTRONIC DESIGN magazine that described a "new" computer protocol invented by the author, John Wickam. The "new protocol" was described as a "serial communications that used only one pin on the cable connector, had minimal software and was inherently self-talking and self-timing". It uses a "frame of pulses" in which a logical zero is indicated by a short pulse and a logic one by a long pulse. The long pulse is three times as long as the short pulse and the interval pulses is equal that of a short pulse. This is precisely the description of Morse code! The only fundamental difference between the "new protocol" and the CW that is heard on the low-end of the 40-meter amateur band is that the new one is operated at a rate of 60,000 words per minute. It is essentially an adaptation of Morse code!

Title>TC3:Headset Mikes and RF Feedback in the Kenwood TS-850
Author>Savage, Bill - K3AM
Source>QST Apr 97, p. 70
Abstract>How to overcome the super sensitivity of the TS-850 to RF feedback from headsets.

Digest>K3AM has used a Heil BM-10 headset for a number of years. When he bought his new Kenwood TS-850S/AT, he found that the Heil headset caused so much RF feedback that he could not use it on certain bands. Later, he got a new Azden HS-03 headset and found that the TS-850 behaved the same with it.

He discovered that the problem could be eliminated by improving the shielding in the cables attached to both headsets. He replaced the original cabling with RG-174 miniature coax cable, then modified the connection to the plug to make it more like a coaxial plug. This means that he connected the center wire of the coax to the appropriate pin in the plug, and the shield braid to the outer shell. Modifying both headsets in that way made it possible to use either with the TS-850, without difficulty.

Title>HK1:A 3-Band, No-Tune Apex Loading Network for an 80-Meter Inverted-L
Author>Lee, Mitchell - KB6FPW
Source>QST Apr 97, pp. 67-68
Abstract>Describes a network of two coils and two capacitors that

tunes a simple inverted-L antenna on three bands, without switching or manual tuning.

Digest>KB6FPW has only enough room on his building lot to erect a single antenna comprised of a 30-foot (9.1-m.) conductive mast with a 30-foot horizontal wire attached at the top. He likes to operate 80-, 40-, and 30-meter bands and he can resonate his antenna as a monopole on each of those bands, in the following ways.

At the top of the pole, he uses an electrical load. On 80-meter, it produces an effective inductor of 8.9-uHy. (inductive reactance 210-ohms). This has the effect of increasing the equivalent length of the wire to one-quarter wavelength.

For 40-meters, the wire can be tuned as a half-wavelength, end-fed wire so the "load" at the top of the mast needs to be the equivalent of a dead short, i.e. a series-resonant load.

On 30-meters, he can load the mast, alone, as a resonant monopole. Hence, the mast-top load needs to be parallel resonant, equivalent to an open circuit.

All three conditions can be achieved by a single loading network, with no switching necessary. The author accomplished that result with a network made of two inductors and two capacitors. The two inductors are wound on separate ferrite cores. The top one has 11-turns of No. 18 enameled wire on a T-106-6 core, having an inductance of 1.42-uHy. The lower one is 20-turns of No. 18 enameled wire on a T-130-2 core, with an inductance of 4.5-uHy. One capacitor is wired in parallel with the top inductor. Its capacitance is 467-pF. The other capacitor is connected across both inductors. Its capacitance is 67-pF. The bottom end of the network is connected to the top of the mast, and the top end to the horizontal wire.

Mr. Lee formed both capacitors from a single piece of double-sided PC-board, using the foil on each side as the plates and the fiberglass-reinforced plastic (FRP) board as the dielectric. In the network, one side of both capacitors are connected together. Therefore, he left one side of the PC-board uncut to form one plate of each capacitor.

On the other side of the board, he cut the foil into two pieces, separated from each other by a strip 0.1-inch (2.5-mm.) wide where the foil was removed. He found that the capacitance of one square inch (6.45-sq. cm.) of the board is about 39.4-pF. The FRP board, less foil, measures 0.031-inch (0.78-mm.) thick and the punch-through voltage is rated at more than 350-volts per mil (1-mil = 0.001-inch) thickness, so the capacitors should be more than adequate for 500-volts working voltage. Other board materials may have other characteristics.

To avoid arcing through the air around the edges, he stripped a border of 0.125-inch (3.3-mm.) width around all edges on both sides of board. In order to obtain the desired values of 467- and 67-pF., the common

side was 6.50-inches (16.5-cm.) long and 2.5-inches (6.4-cm.) wide. With the 0.125-inch border, the dimension of the common plate was, therefore, 2.25- x 6.25-inches (57.2- x 158.8-mm.) The top capacitor was 2.25- x 5.35-inches (135.9-mm); the bottom one was 2.25- x 0.800-inches (20.3-mm.)

The author noted that another common grade of surplus PC-board material measures 0.062-inches (1.57-mm.) thick. Its capacitance is about 20-pF. per square inch (6.45-sq.cm.) The greater thickness of the FRP would give a higher voltage rating but the lower capacitance would require about 27-square inches (174-sq.cm.) of active plate area.

FEEDBACK (FB)

Title>FB1:"A Drift-Free VFO", QST Dec 96
Author>Makhinson, Jacob - N6NWP
Source>QST Apr 97, p. 68
Abstract>Pin 14 of U-12 should connect to plus 5-volts, not to plus 12. The parts list shows U-12 as a generic '4066, whereas the schematic shows it as a 74HC4066. In fact, either part should work well.

Title>FB2:"Refurbishing Boat Anchors", QST Jan 97
Author>VanProoyen, Leonard - K8KWD
Source>QST Apr 97, p. 68
Abstract>The original letter stated that the resistance measured across the line cord should be very high. This is true only if the line switch is open. If it is closed, resistance will be low.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Apr 97, pp. 50-51
Abstract>Questions and answers of interest especially to newcomers to amateur radio.

Digest>Questions discussed in this issue include: operating packet from the cab of a long-haul truck; switching the audio input of an FM transceiver between the microphone and a packet TNC; using a quarter-wavelength vertical antenna on its second harmonic; catching the "hot" openings on the 6-meter band; using a receiver to monitor the CW output of a transmitter; decoding DTMF tones on Windows 95 computers; satellite-based FM repeaters; power limitations on the novice/ technician-plus portion of the 10-meter band; and other matters.

Title>NHC2:Me? Operate W1AW?
Author>Peach, James David - KE4ROB

Source>QST Apr 97, p. 52
Abstract>Describes a new ham's reactions to operating W1AW, the ARRL home station.

Digest>Any licensed amateur can visit ARRL Headquarters and operate the W1AW station. The author, a new ham, visited in autumn, 1996, and conducted his first CW QSO on W1AW. He called CQ on the 40-meter band and W8TZ, Milt, replied. This was a thrill to KE4ROB, made even more thrilling when he learned that Milt was 90-years old and had been licensed for 74-years.

That must have been one of Milt's last few QSOs, as he became a silent key soon thereafter.

Title>NHC3:Transatlantic Multimode Experience
Author>Bishop, Al - VE1MDD
Source>QST Apr 97, pp. 53-54
Abstract>Relates the experiences of a ham who was a member of a crew that sailed a 45-foot boat across the Atlantic.

Digest>VE1MDD was one member of a six-man crew that sailed a 45-foot (13.7-m.) sailboat from Nova Scotia to Ireland in early summer, 1996. While enroute, he operated SSB, HF packet, SSTV, and received WEFAX images. HF packet was used to relay E-mail from the boat directly to the Internet. This is the story of their adventures.

Title>NHC4:A Fun-Filled Morning With Ham Radio
Author>Lee, Arthur R. - WF6P
Source>QST Apr 97, p. 55
Abstract>On one typical morning, this ham talked to several people on both CW and voice, including an autopatch on 2-meters. He contacted two old friends and acquired a new one.

Title>NHC5:Phonetic Dilemma
Author>Aurick, Lee - W1SE
Source>QST Apr 97, p. 56
Abstract>Standardized English phonetic alphabets are necessary, but it is very difficult to create one that is equally useful to people with various home languages. The one now in use is a reasonable compromise.

Digest>From the time that amateurs began using voice transmissions, they used phonetic alphabets when spelling words on noisy channels. Prior to World War 2, there was no standardization; hams used whatever words entered their heads to identify letters.

The armed services, on the other hand, had standardized phonetic alphabets; one for each of the services! The Army could not talk to the Navy. During the buildup, immediately prior to the United States' entry into the war, the services finally created a standard phonetic alphabet for all American forces. It was the Able, Baker, Charlie, Dog alphabet

that was pounded into the heads of countless American servicemen, and the majority never forgot it. But, however useful it was to Americans, it was decidedly not useful to our British allies, not to mention allies to whom English is a foreign language.

After World War 2 was over, the international aviation industry adopted English as the common language used in all commercial flying, and an internationally understood and accepted phonetic alphabet became a necessity. The International Commercial Aviation Organization (ICAO) compiled one, and it was adopted by the International Telecommunication Union (ITU) which makes international communications regulations. It was also adopted by amateurs, worldwide.

The alphabet that we now know that begins: Alpha, Bravo, Charlie, Delta is not perfect, but it is almost universally understood. Unless and until something better is adopted, all amateurs will find that it is usually wise to use the standardized phonetics in ham communications.

Title>NHC6:Morse at the Movies
Author>Cox, Donald - AA3EK
Source>QST Apr 97, p. 58
Abstract>"Morse code" sequences in movie scripts are usually just gibberish. But some few have contained actual code messages.

Digest>This article reports a study that has been made of the use of Morse code in movie scripts. Not surprisingly, many "Morse code" sequences in popular programs of all sorts, including movies, are gibberish. But sometimes, such as in a movie about the sinking of the Titanic called: A NIGHT TO REMEMBER, actual and realistic messages were heard.

A more detailed report of the apparently ongoing survey is available on the World Wide Web at: http://web.idirect.com/~rburnet/movies.html.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Radio Clubs of Hungary
Author>Pataki, George - WB2AQC
Source>QST Apr 97, p. 28
Abstract>A survey by one visitor of ham radio activities in Hungary.

Digest>WB2AQC recently visited Hungary and contacted many radio clubs and amateurs there. He reports that there are many enthusiastic hams and highly active ham clubs, a number of which support repeaters and carry on other cooperative activities. Photographs are included, showing a number of Hungarian hams.

Title>GI2:CQ From Superfort Fifi
Author>Tuck, Fred, Jr. - WD4KTI and Lark, Al - KD4SFF
Source>QST Apr 97, pp. 40-41
Abstract>During a recent air show in South Carolina, members of a ham club operated a special event station inside a B-29 Superfortress, both during short flights and also while parked on the ground.

Digest>In June, 1996, the Experimental Aircraft Association sponsored a "Young Eagle's Day" at the Greenville/Spartanburg, South Carolina, airport, meant to interest young people in aviation. "The Confederate Air Force", an organization that maintains World War 2 vintage aircraft in flying condition, brought three bombers to the field for the event. They were a B-24, a B-25 and a B-29.

During the two-day event, members of the local Experimenters Group Amateur Radio Club conducted a special-event station using some of the original radio equipment aboard the B-29 Superfortress named "Fifi". They not only operated from the plane while it was parked on the ramp, but also when it was in the air during some of the short flights the plane made carrying visitors. Some of the pilots who flew the planes were famous flyers from World War 2.

Title>GI3:Heathkit's 50th:The Dream Turns to Gold
Author>Penson, Chuck - WA7ZZE
Source>QST Apr 97, pp. 42-43
Abstract>A history of the Heathkit Company.

Digest>Heathkit was a company that sold electronic kits from 1945 until about 1990. Among the kits were all kinds of test equipment, as well as transmitters, receivers, and transceivers. A great many hams of that period built the kits, and many are still in use. Almost every hamfest flea market is studded with examples of Heathkit products.

This article is a review of the entire history of the Heathkit organization and its products. A number of advertisements that ran in ham magazines from the 1950s to the 1980s are reprinted in the article.

Title>GI4:Tips on How to Break in New Coax
Author>Pearce, Chuck - K3YWY and Ziegenfus, Bud - N3LJK
Source>QST Apr 97, p. 44
Abstract>A tongue-in-cheek article for April Fools' Day.

Digest>This is the latest "Larsen E. Rapp"-type article run in an April issue of QST. For many years, a long time ago, each April issue carried a tongue-in-cheek pseudo-technical article signed with that pseudonym. Apparently, Mr. Rapp is no longer among the living, but K3YWY and N3LJK are carrying on his honored tradition.

Title>GI5:Get Ready for Phase 3D! - Part 4
Author>Ford, Steve - WB8IMY and Lau, Zack - W1VT
Source>QST Apr 97, pp. 45-47

Abstract>This instalment of the series describes more of the features of the microwave channels on the satellite, concentrating on the 10.5-gHz. band.

Digest>This latest instalment of the ongoing series of articles continues the discussion of microwave equipment for using the microwave facilities of the Phase 3D satellite. It emphasizes the advantages of the downlink at 10.5-gHz.

A major advantage to this band is the fact that small dish antennas will provide very high gain reception. The growing popularity of TV broadcasts using the digital satellite systems (DFS) makes 18-inch (46-cm.) diameter dish antennas widely available at modest cost. An article by N1BWT: "More on Parabolic Dish Antennas, QEX Dec 95, describes how such a dish can be modified to become a highly successful receiving antenna for the 10-gHz. Phase 3D signals. A reprint of that article can be obtained from ARRL Technical Secretary, 325 Main Street, Newington, CT 06111. The price is $3.00 for ARRL members, $5.00 for non-members.

Using a high-gain antenna requires that it be accurately aimed, so a 2-axis rotator is necessary if one wants to follow the "bird" across the sky. A suitable one is the Yaesu G-5400B that costs about $500. Alternatively, the antenna could be aimed manually and left in place. While the satellite is in certain parts of its orbit, it will appear to move very slowly, so a fixed position may allow an hour or two of operation. If the satellite is successfully put into its planned orbit, it will appear in the sky in exactly the same path, at the same time, every other day.

Uplinks can be made on any of several bands. One that is likely to become very popular is 1.2-gHz. As little as 20-watts output on that band to a commercial 1.2-gHz. Yagi should give good results. Alternatively, a home-built helical antenna can be made easily and will give the additional advantage of circular polarization. That will provide an extra 3-dB. of gain.

Title>GI6:Operating from Ground Zero
Author>Baker, J. Lee - WK3U
Source>QST Apr 97, pp. 48-49
Abstract>Describes the amateur radio club for employees in the Pentagon Building, Washington, DC.

Digest>The Pentagon Building in Washington, DC, is often wryly called "Ground Zero", referring to the fact that it would likely be the first target for a nuclear strike if one were ever to be made against the USA. This is because it is the headquarters of all US armed forces. The employees who are radio hams have a club located on the top floor of the building. It includes the club station: K4AF.

The club has about 25 active members and meetings are held monthly.
This article describes the station, the club, and its activities.

Call 425-454-7619 and press " 3 ' when the automated system answers.
I am sure you can purchase a couple copies of these manuals from
ICOM's parts dept. The cost for the manuals should be between $ 10.00
to $ 20.00 each plus shipping and handling. Generally manuals are not
given out for FREE.

Turn on the radio
Set up your desired frequencies
Press and Hold the VHF main tuning, UHF Main Tuning and SET buttons
all at the same time.
You should see a flashing " L " in the display. The radio is not in
cross band repeater mode.
Press only the set button to revert to normal.

Contact 75540.525@compuserve.com and ask for a schematic. Include
your mailing address and that you need the OPC-478 schematic. The
cable has about 10 components inside the DB-9 connector shell to
create a level converter. Otherwise the OPC-478 sells for $ 48.00

Al;so remember chargers made for nicad batteries do not deal well with
NiMH batteries. NiMH batteries require different charging
specifications than nicad batteries do. WWW and Associates did write
a tech note concerning this.

The discussion centered around the design factors involved, and performance
limitations resulting from running a UPS from an essentially infinite
source of
DC power (such as an auto power system which is continuously recharged
by the running engine).

We all are aware of the obvious fact that a small UPS battery will run down
in some specified time at some defined load.

From: CrACKeD <cracked@primenet.com>
Subject: Alinco DJ-580T UHF TX Problems

This is beginning to annoy me, and I know it's annoyed other people out
there. My DJ-580 occasionally stops transmitting on UHF for no real
reason. When I key, the "ON AIR" indicator just flashes and the radio
doesn't put out any signal whatsoever. The VHF side continues to work
just fine, though, and has never had the same problem as the UHF side
before. This happens very randomly, and has been happening for quite some
time. It happens both when I'm using external power and antennas and also
when I'm using stock battery packs and antennas. What's the cause? The
manual contains absolutely nothing which can help me figure out what's
going on here.

CW is "useful" only to those who want to use it..... We don't require
drivers to demonstrate proficency using the three pedal--spark advance
lever system in the Model T to get a drivers license any more, in fact we
don't require proficiency with a stick shift.

Time to move on, RS-15 is about to come over...

What about when mains power dies... This has happened MANY times during
the life of the machine I use at work (which still runs WFWG 3.11).
Does your PC have a power fail detect mechanism?
If it does, shouldn't it work from the power switch as well?
If not, and you can't shut down safely with power fail and Windows
running, that's bad design. Having a few temporary files stranded
that need tidying up might be tolerable, damage to system integrity
would not. What exactly are you saying are the consequences
of turning the computer off with the program still running?

From: riecherg@agcs.COM (Jerry Riechert)
Subject: Beginning HAM seeks 2M HT info

As a new HAM, I'm looking for any info on inexpensive 2M HTs, around
$200 or so. The features I'm looking for include DTMF capability, CTCSS
encode (don't know that I need decode), a reasonable number of memories,
min 2 or 2.5 watts out on the standard battery, easy to program,
extended receive might be nice, etc. Are there any other features I
should be looking for?

In perusing the catalogs, the following seem to be the most likely
candidates: ADI AT-201 (least expensive and currently includes an offer
for a free speaker-mic), ICOM IC-T2A or T22A, Kenwood TH-235A, Alinco
DJ-191T, Radio Shack HTX-202. Are there others in that price range that
I should be considering?

I'm not looking for info on the HTX-202 as I've seen a ton of posts that
indicate it is a very solid performer (Yes, I know it doesn't do
extended receive). I AM looking for info, pro, con or comparing the
others I've listed. Pointers to any on-line reviews would also be
appreciated.

In addition to posting a reply, I'd appreciate an email copy also as I'm
not so sure about our newsfeed.

Subject: Difference between RG59 A/U and RG59B/U:

HELP: Is there a difference between RG59A/U and RG59B/U for UHF (used to co-phase yaggis)-Australia

I want to use RG59A/U to co-phase some 470 Meg yagis.
No one in Australia seems to sell some short length(10 metres) of RG59A/U.
But I can purchase some short length of RG59B/U.
Would RG59B/U be satisfactory to use with 470 MHz and later I would have to use it to co-phase yagis on 920 MHz.
What is the difference between RG59A/U and RG59B/u for UHF (used to co-phase yaggis).

Could you please E-mail me direct

Subject: gmrs radios

Try the new Family Radio Service. The radio's range from about $100 to $200. They are located around/in the GMRS band. You can get the whole run down in Popular Communication July 97 issue or CQ VHF June 97. They

are very effective over water. Longest DX on one of these radios at
1/2watt is 385.5 miles over Lake Superior. However they are intended to
be used at very shot distance under 5 miles. Check it out. No license
requried. Can talk about anything.

> The ones that were prosecuted had other means of communications available,
> and therefore it was NOT an emergency.

As this is a legal matter I put the question to the hlaw mailing list
which is read and contributed to by amatuers who are lawyers. I
believe that I put it in a manner that was fair to both your side of
the matter and mine.

So far I've received just two comments. One said `first save the
life and then worry about the frequency'. That's a nice truism but
it's not helpful as you and I have no disagreement on that point. And
the other reply gave a horror story of a complaint by a California
local law enforcement agency to the FCC which resulted in a charge of
unlicensed operation. But here the case became murky because the
facts were in dispute and the matter was plea bargained down to use
of unapproved equipment and the forfeiture of that equipment. So it
never moved to a hearing before an FCC judge on the point in dispute.

Unfortunately (and surprisingly to me) none of the list subscribers have attempted to explain the Part 97 Rules we are discussing, but I remain hopeful and keep reading.

> I have had enough of this drivel, you asked, I showed you where you were
> wrong. The questions from the question pool are not made up out of thin
> air, but ARE the rules and regulations

Again we disagree. The rules have the standing of law - the question pool is the product of amateurs, the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators. Of course the pool is intended to track the rules, but if and when they disagree it is the rules that control and not the pool.

> answer B, up and down, is valid only for the distance in which the antenna
> is mounted above the ground. Then the down wave is either absorbed or
> reflected.
> The USEABLE protion of the wave is north and south,

This is just plain wrong. The question only asked about the direction of energy sent out from the dipole itself, and a dipole radiates in a three-dimentional pattern similar to an anulus or doughnut. So there will be zero difference between the magnitudes of B and C (or indeed any other directions in any plane perpendicular to the line of the dipole). You may be correct in claiming that amateurs will find that the sideways radiation to be more useful. And if they had asked that different question, you and I would agree on the best answer.

I wasn't trying to start a different dispute, just to show you that the question pool is fallible. But if you and I can not even agree on the radiation pattern of a dipole, it's not going to be a good example :-)

There must be a good number of folks reading this thread. Does anyone else have a view one way or the other on the correctness of the Novice Pool questions on either that dipole or the use of unlicensed frequencies in emergencies? And BTW, I'm not disputing

that the Novice emergency help answers are the best of the four choices offered, just that those best answers are less than fully correct readings of the regulations. With the dipole question I do also dispute that answer C is better in any way than answer B.

> Go ahead and make any other further comments, I will no longer answer as I
> tire of this as I tire of the CODE vs NO CODE threads.

There is a difference between our discussion and the Code debates. The supporters and opposers of Morse Code testing are arguing their values and preferences. I believe that we are contradicting each other over facts, and in our case one or the other of us is likely to be right on each of these points.

> And to all the amateurs here: be assured: In a REAL emergency, when no
> other means of communications is available, use whatever means available
> to help or get help. Lives may depend on it, even of the caller is W2tg,
> an extra on extra bands needing help and you are a tech scanning the
> bands. I am sure he would change his mind then, and would WANT your help!

If you choose to quote me, please do it accurately. I am in no way suggesting that one should abide by the rules in preference to helping to save life or property. Indeed that question never came up before in this thread. All that I am saying is that when someone does operate outside the regular non-emergency permissions of Part 97 for that purpose, that they are doing it without any permission from the FCC. I'm really sorry you can't follow what I'm trying to say.

Let's try an analogy. If we have a sick man that needs to get to hospital then you or I will try to get him there as fast as possible and we might well feel entitled to ignore speed limits and red lights. That is fair and also reasonable. But we still do not have any permission in our states' drivers manuals or highway laws to do it. It is a mitigation which might defend us from penalties but it is not lawful, only reasonable. Speeding may well be morally right and also illegal.

> <Thread terminated for my perusal - no longer interested>

Dewey, I'm sorry I lost you before you even understood what I was trying to say.

Regards,

Subject: 10 KW Collins Shortwave Broadcast Transmitters For Sale

There are 3 Collins10 KW shortwave broadcast transmitters
immediately available. They are currently in western Europe. They
were manufactured in 1982 and very well maintained. The modell is
208 U 10, and can broadcast in AM,CW and SSB. The main valve
is the 4CX10.000 . Frequency range is 2-30 Mhz.
Price for each transmitter (with inbuilt power supply and an
electricity regulator) is 17.000 German Marks (roughly 9,000 US
dollars)

In addition to this, there are 3 SIEMENS 10 Kilowatt transmitters
available. They were used for ship to shore communications. The
Siemens have Telefunken exciters with digital frequency readout.
These transmitters can also broadcast in AM,CW and in SSB.
The Telefunken exciters were manufactured in 1985, and the
Siemens 10 KW boosters were built in 1980, but only in 1989
they came in use, and therefore have only been used in the last 8
years. Included in the price of this Siemens/Telefunken transmitter
is a 3 phase power supply, a double external ventilator and an
airfiltering system. The main valve for the Siemens is the RS 2012.
Frequency reach is 1.5 to 30 Mhz. Price is 10.000 German Marks.

All transmitters come with all the books.

Subject: ARES/RACES: Need manual for ICOM 3220 H

My local ARES/RACES group is setting up a permanent station in the
Volusia County (FL) Emergency Operations Center, and has installed two
ICOM 3220 H dual band transceivers. In order to provide quick and easy
operation for "tag-team" operators, the manuals (which we do not
presently have) would be very useful. The radios are discontinued, and
ICOM has not been helpful in terms of getting a manual. If anyone has
one, and would be willing to fax, email, or snailmail a copy, our
group would be willing to pick up the tab.

If you can help please contact me <kmccoy@stetson.edu> or our area
coordinator Bill KM4AE <km4ae@juno.com> as soon as possible. The
hurricane season is upon us.

From: "Herb Rosenberg" <rosenbeh@netsoft.com>
Subject: Can an Active Ham really be RFI & TVI Free???

I am interested in receiving comments on your opinion about whether it is really possible today for an active HF amateur living in a dense suburban QTH, to operate actively without alienating his neighbors due to RFI & TVI.

I have had discussions with several hams that have commented that with all of the TV's, VCR's, cordless telephones, electronic sprinkler systems, security systems, etc. out there, a ham living in any dense residential area fundamentally if faced with an overwhelming challenge in trying to be a serious HF operator and not alienate everyone around him.

What do you think? I would especially appreciate hearing from hams that are extremely active on HF, with high power, living in standard suburban areas with lots on neighbors all around.

Thanks.

Well that pretty much puts a sock in the mouth of those who feel
they can operate on any freq'y they desire. There'd be no need
for the above provision if their stance was valid.

Well, Bob, that's why we call him "Spew". He's a CBer with a ham
license. He shows up here and trolls for a couple of days, and then
disappears again. Usually his comments are berating towards the
elderly, or 'suggestions' (for informational purposes only, of course)
on how to pin someone's coax or rip their antenna down with your
car bumper and clothsline. His latest rant was about "lazy" mexicans
and other racially-biased slurs. When he didn't get a rise out of people
with that, I guess he figured he would start bashing Americans. Pay him no
heed, and eventually he will go away...

I suspect that much of what QST discovers happens because enough people
tell the editor what they want to see in the magazine. :-)

I look on QST the same way I look on my other non-ham magazines. I never
enjoy and read every article. If most months I find something I am glad
I read, then I am happy.

Subject: You Good Buddys - stick to CB

Ahh, yes...the old good buddy theory. If we let them become hams, they must forsake their past and from this day on disparage CB radio.

I too got into ham radio via CB as many of us did, although finding peole who will admit it is getting harder and harder. As was said in the previous posting, there are good eggs and bad apples in both hobbies. To this day I will not go anywhere without both my two meter rig or my CB. Why? Because one of them is bound to get me out of a jam and I could care less which radio is responsible for my rescue should I ever need assistance. FYI, here in upstate NY the two meter end of the Capital District Commuters Net was disbanded because qualified individuals could not be found to man it. The CB end of it lives on.

Subject: fixing scanners

anyone ever taken a scanner apart and done some repairs.
I have two AOR-1000 units.
On one of my units, I am replacing the power board...
not that difficult to do...just need to open up the unit,
remove some screws, unplug some connector plugs, and unsolder one wire.

I've fixed radios and scanners before. Sometimes, I will also make
adjustments to improve sensitivity on desired frequencies.

A N N O U N C E M E N T

Live on the Internet every Tuesday Night

"Mysteries of the Bible Revealed and Resolved"

Contrary to the popular opinion created by Time and
Newsweek, every historical event in the Tanakh can be found
in the archaeological and historical records of the Near
East when our revised chronology is taken into account.

All events from Sodom and Gomorrah, through the captivity
in Egypt, the subsequent conquest of the land of Canaan to
the story of Esther will be presented in its archaeological
and historical context and the Biblical account shown to be
completely accurate.

Every Tuesday night, one topic will be presented live on
the Internet starting in the next few days with visuals,
expert interaction and debate by all who wish to be
involved. Each topic will be presented to enable the widest
possible audience to understand and participate. Moderated
by experts in each field.

Please inform all your friends and ask them to send their
e-mail address to:

bible@primesolution.com

for ongoing information.

Some topics to be covered include:

Creation vs. Evolution
Codes in the Torah.
Sodom & Gomorrah: 1.5 million bodies found!
The Famines of the Patriarchs - In Egyptian Records!
The Pyramids and The Sphinx, tombs or ....?
Kabbalah.
Who was the Pharaoh of the Exodus?
Dan, Dan, The Travelling Man
The Hyksos/The Israelites.
The Jericho Story: The Bible and the Archaeology match
at last.
The City of David found.

Solomon's Family - a son in Egypt!
Raiders of the Lost Ark: Found.
Hear Oh Israel, Where Oh Israel?...The Lost tribes...found.
Ezra and The Great Assembly?
The Aleph-Bais, alphabet or Holy Language?
Esther the truth at last.
The Dead Sea Scrolls, a mystery solved.
The Messiah in Prophesy and Reality.
The Times of the End.
etc.etc.etc.

Please note that the focus of this program is scholarly
rather than religious.

Hosted by the University of South Florida Radio and Electronics Club.

Admission $3.75
1st swap table $10 including ticket.
Additional tables $10 each up to 4 tables.
The 5th table and above are $15 each.
If you need more than 5 tables you must contact us!!!
In order to ensure your table reservation please pay early.
---
for table or advanced ticket sales: (must be postmarked by 7/15/97)
PLEASE SEND US A SELF ADDRESSED STAMPED ENVELOPE (SASE).

USF HAMFEST
4202 E FOWLER AVE., CTR 2416
TAMPA, FL 33620

USF is easily located on Fletcher Ave between I-75 and I-275 in Tampa.
Enter campus on North Palm Dr. follow the signs to the
USF Special Events Center. (CTR)

Just close enough to Busch Gardens to let the family go there while you play!

TESTING WILL TAKE PLACE AT 11AM.

TALK IN 146.94-
Vendors may setup FRI NIGHT 6-9pm and SAT MORN 8-9am.

SEE YOU THERE!!!!

for more info, direct questions to: USFREC@eng.usf.edu

OR WATCH http://www.eng.usf.edu/studorgs/radio

or call the club at: 813-974-2253

We are committed to making sure that this hamfest is affordable to
the average ham... We have kept our admission and table prices the
same for several years.

Our only increase this year is for folks that buy 5 tables or more
(from $10 to $15). As I am sure you can understand our costs went up.
This will generally affect only larger vendors or folks that are
selling large quantities of stuff at the hamfest.

Thanks for many years of faithful support.

The USF Radio and Electronics Club

That's pretty neat stuff Michael. Maybe this year you guys should give
some thought to adding an HF station. :-)

Do you fly back to the East coast for Field Day too?

Consider yourself fortunate. It happens in most, but not all parts of the
country.

>I think the detractors are a classic case of (I really would like to be
>in Ham radio too, but I can't afford it, and/or can't pass the test)

Here we go again with the incorrect HAMBO assumption that anyone who dare
criticize their prestigious hobby has just got to be an unlicensed,
unwashed CB'er. I am a licensed ham, including your all-important Morse
code endorsement. Man, y'all just HATE the fact that one of your own
would take to the Internet and publicly disagree with the status-quo,
don't you?

>they use a few isolated incidents of Ham troublemakers and/or unsavory
>activity on the Ham bands and blow it completely out of proportion. I
>guarantee you there is a bad apple or two in every barrel, but the Ham
>bands I know (10-75 meters) are not a problem.

75 meters is "not a problem?" I don't suppose you've ever heard Big Al's
8,000 watt "jam sessions" on 3894.5, huh? And you've never run across
"The Walter Barstool Show" on 3853? Certainly, you've never experienced
the constant jamming, malicious interference, profanity, personal threats,
music, and other assorted chaos on these frequencies plus 3901, 3950,
3898, etc. Sounds like more than "a bad apple or two" to me. Let's
see...there's the above-mentioned players plus "Dumba** Donnie", "Dipsh*t
Dan", "Ralph the Thief", "Pork Butt", etc. And guess what? These guys
are all Generals or higher. Many of them Extra Class. The Elite of

Amateur Radio for all the world to hear!

Subject: Summary of Hawaii Hurricane Exercise

Here is a brief overview of the Oahu participation in the recent hurricane
exercise. Please feel free to send this to others, if you wish.

Bev

Statewide Hurricane Exercise, Makani Pahili '97:
Oahu Amateur Radio Participation
by Bev Yuen
The annual statewide disaster drill was held this year during the first week of May. This exercise runs over several days, simulating preparations made during the approach of a hurricane and the hurricane's immediate aftermath. This year, as in previous years, the exercise involved diverse agencies throughout the islands, including Civil Defense, State and City governments, private and non-profit agencies and the military. It's purpose is to update and practice disaster plans and make changes where necessary to improve each group's response if an actual disaster occurs. Some of these agencies used tabletop exercises, while others conducted hands-on practice. Each year, amateur radio operators across the state participate in this exercise.

Amateur radio operators on Oahu participated in actual drills conducted by Oahu and State RACES, the amateur radio operators associated with the Oahu healthcare agencies and SKYWARN. Amateurs coordinated with the Healthcare Association of Hawaii's Mass Casualty Exercise across the state and with the National Weather Service for SKYWARN operations. At least 40 amateur radio operators were actively participating on Oahu alone. The commitment of these volunteers to amateur radio and emergency communications is evident as many took vacation from their jobs or changed their schedules to be part of the exercise held on weekdays when most would be working.

Beginning Sunday, May 4th, about 72 hours before the hurricane's expected impact, Oahu RACES conducted extra nets at 7:30 am, noon and gave updates on the evening nets as they would do during the approach of an actual hurricane. These nets were used to give updates on exercise participation, but in an actual hurricane approach, would be used to check availability of operators and to position hams in key locations prior to the expected impact.

SKYWARN conducted their drill on Tuesday afternoon, May 6th from the National Weather Service offices at UH in Manoa valley. The simulated hurricane-related messages soon became actual messages as a severe rain storm swept over Oahu that afternoon. This, combined with equipment problems, created a more challenging afternoon than anticipated.

On Wednesday morning, May 7th, Oahu radio operators, along with others all across the state, participated in the portion of the exercise simulating the aftermath of the hurricane. Oahu amateur radio operators manned stations at Oahu Civil Defense, State Civil Defense, 6 Oahu healthcare agencies, the Waikiki Hotels Emergency Operating Center, First Hawaiian Bank and Ko Olina resort. As well, there were individuals operating as Net Control Stations and relay stations outside these institutions and others simulating positions such as a Civil Defense District EOC, a public evacuation shelter and individuals sending messages. For this exercise, they used voice communication only, no packet radio operations. Operations were on VHF and HF frequencies.

Six Oahu healthcare agencies now have an amateur radio station permanently located in their facility and each had their station in operation for this exercise. They included: The Queen's Medical Center, St. Francis (Liliha) Medical Center, Kuakini Medical Center, Kaiser Medical Center, Kapiolani Medical Center and the Blood Bank of Hawaii. They participated as part of the Healthcare Association of Hawaii's Mass Casualty Exercise. They passed messages that were given to them by their hospital's emergency operating center or originated with the healthcare association's exercise coordinator located at OCDA. They operated their own VHF net, using the repeater at St. Francis Medical Center (145.49 MHz), with NCS located on the 28th floor of the First Hawaiian Center Building in downtown Honolulu. For message passing, stations were sent to simplex frequencies. During part of the exercise, the repeater was turned off to simulate what would be the operating conditions in a real emergency. Net operations continued, almost without interruption, under control of their NCS, on their alternate, simplex net frequency. Several long-time hams have commented that this was the best-run practice net they have heard on Oahu in 20 years.

State RACES, located at Diamond Head was NCS for a statewide HF net used by the healthcare agencies, among others. On Oahu, The Queen's Medical Center, the healthcare relay station in Salt Lake (WH2E) and OCDA were communicating on HF. Neighbor island HF stations included hospitals on the Big Island (Honokaa, Hilo Medical Center), Maui (Kaiser Clinic and Kula Hospital), Kauai (Mahelona Hospital). Individual operators checked into the HF net from each island.

Oahu RACES, operating from OCDA, was net control for their net (146.88 MHz) to pass traffic related to OCDA activities. They used this exercise to train several of the newer operators by pairing them with more experienced message handlers. They set up several portable stations within OCDA to have more flexibility (one for HF, and 2 VHF stations, one of them to monitor the healthcare net).

For this exercise, several other agencies participated in the nets including the Waikiki hotels Emergency Operating Center and First Hawaiian Bank. Neighbor Islands had operators at agencies, such as Kauai Civil Defense while others operated as individuals with traffic. As well, many others were monitoring and checked into nets during the morning.

The group operating from OCDA and the 'hospital hams' have each held an evening critique session to assess how they did, share their ideas and experiences and identify weak areas. Each group identified two or three priority areas to focus on during the upcoming year. The Oahu hospital group priorities were a) developing more operators and b) incorporating packet radio communications technology into the standard operations. The RACES group at OCDA will focus on training and obtaining equipment and supplies to make their system more flexible and more organized for the high volume of traffic which can be expected at OCDA.

We all hope that a large-scale emergency will never materialize. However, each exercise raises the readiness level of each participant by giving us the opportunity to test equipment, skills, procedures and teamwork and uncovers where we need to improve. Thanks to all of the operators, both on

Oahu and across the state, who took the time and made the commitment to participate in the exercise.

OK, look, CW is not the most popular form of communication today. I am not sure what is, but it is a form of communication, and a filter. If you want the extra benefits that the General, Advanced and Extra class licenses offer, learn the code. It is not the end of the world, and it does separate the men from the boys. Don't partake in the dumbing down of Amateur Radio. It still is a great hobby and public service!

The ARA is just a way for that Dirtball K1MAN to make money off ham radio. This is probaly the most blatant and threatneing rule violation taking place right now. It's bad enough this jerk has qrm'ed 20 and 75 for years now but hams are going to pay him to do it. When a NPRM was voted on to get his megalomaniac qrm'in butt off the air guess who backed him up? That's right,the ARRL. Why? Because they did'nt want to lose their precious W1AW. Now he slams them with even more gusto than the commission. Only in America.

5538. Windows 95 Problems

Anytime I've seen problems with Windows 95 it's been related to operator error. I've had problems during the installation and I have to admit, it was my own fault. Now, I have it running and have had it for over a year, and I can't imagine running Win93 (3.11) or DOS (yuc). But I'm not surprised at the comments I see about Win 95 and other computer advances, when I see most of you guys bickerng over morse code, and trying to figure out how to run packet windows programs on your 8088's and C-64's. So much for being state of the art.

>How many amps can I draw off of an 110 amp alternator in a pickup without >draining too much or overworking the alternator?

I dunno. What does the existing load look like? Most HF radios will draw 20 amps peak for around 200 W PEP, and run in receive mode with as little as 2 amps. That shouldn't be a big concern for your electrical system.

If you're thinking about installing a big solid state amplifier on board, you may want to consider a bigger alternator, a second battery, and some very heavy wiring. If you've never done that sort of thing before, I suggest you consult one of those high end car audio shops. They install that sort of thing all the time. It's their job to know how to do it safely.

What part of "no provision of these rules" don't you understand? 97.405 only
waives provisions of Part 97 rules in an emergency. It isn't a blanket waiver
for activities outside the scope of the Part 97 rules.

The nickel metal hydride batteries do not seem to charge well in a fast charger designed for nickel cadmium batteries. Before buying my MaHa battery for the Kenwood TH-79A, I called MaHa to ask if the battery could safely be charged in the fast charger I have for my Kenwood. They checked, and said it was, though they advised me to use the trickle charge mode as much as possible (even on my NiCads) to extend the battery life. After getting my MaHa battery, I tried the fast charger and foud that after about 20 minutes it was so hot that I thought it would catch fire! I removed it form the fast charger, then let it cool down. I used it on the TH-79A until it was again depleted (which didn't take long!), then gave it a full charge on the trickle charge setting. The battery didn't seem to be harmed by the aborted fast charging, but I wouldn't do it again.

Overall, I like the MaHa battery much more than the factory PB-34. The MaHa unit lasts about twice as long. I just wish I could safely fast charge it without having to buy another charger.

If you were distressed that you were running late and the dinner in
the oven would be burnt unless someone turned the oven down, would
that count? I only invented a deliberately silly example to show how
unlikely it was that any such help was lawful. If the threat was
sufficiently grave, then surely anyone with a concience would act
like you intend to do. But that just doesn't make it lawful.

There ARE laws against the unlicensed use of radio transmitting
equipment except for certain services such as cordless phones, CB,
baby monitors, garage door controllers, etc.

I asked about this in the ham-law reflector and so far there've been
nine comments posted on that topic. Not one of the lawyer/amateurs
has suggested that offering help outside the ham bands was lawful.

The discussion passed by that suggestion immediately, and became one
only of the circumstances where the ham who bravely hazards his
equipment and his license by providing such unlawful assistance might
escape penalty. It appears that my previous analogy, the one of
exceeding the speed limit to help get someone to the hospital, was
exactly correct.

Have a Yaesu FT 470 2meter & 440 mhz handheld for sale. In good condition, but could use a little cleaning up. Backlight on display needs replacing, otherwise everything else works fine. Comes with batteries, cases, covers, origional manual, and modification manual. Asking $175 but make an offer.

I have my doubts about that. For example, I have a SL Waber UPS rated
at 250 VA. The heat sink for all of the power devices is a large bar
of aluminum attached to the circuit board. This has no significant
heat path to the outside that I can see. The case of the unit is
plastic, with a few small vent slots. None of the aluminum is exposed
on the outside of the case, nor is there a fan to draw air past the
heat sink. I'll bet it depends on the fact that it will only be running
for about 5 minutes at full load before the battery is depleted, and
longer run times go with reduced load.

In comparison, I have a Statpower inverter rated at about 125 W continuous
using the same technology (high-frequency inverter, 60 Hz AC synthesized
from 160 V DC or so). The entire case for the thing is the heat sink -
it's an aluminum extrusion. I'll believe that this will run at rating for
hours.

I've also seen an APC sine-wave inverter with the transistors mounted
to an internal fan-cooled heat sink. I'll believe that it might also
run indefinitely if kept supplied with DC.

The only real difference is in the suitability of the outer insulation
jacket for oil resistance and buryability, which you shouldn't have
to worry about when using for a cophase harness. What you should be
concerned about is using this thin cable at 470 and 920 MHz; the loss
gets pretty bad (this is cable only slighlty larger than RG58). Why
not step up to RG9 or such (this is a larger diameter cable ala RG8).
Good luck in Footy Land.
Go Carlton!
